BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

MISTRESSES AND MAIDS

DON'T OFTEN AGREE, BUT IN THOUSANDS OF HOMES WHERE

The World's Knife Cleaning Machine

IS USED, THEY ARE OF ONE MIND AS TO ITS EXTRAORDINARY MERITS. By Royal Letters Patent.

WHAT IT WILL DO

It will clean any sort, shape, or size of knife.
It will clean, easily, at the rate of 500 knives per hour.
It will make knife-cleaning a pleasure.
It will easily command large sale.
It will do away with all excuses for dirty knives.
It will feed itself with powder.
It will prove itself the best of all knife-cleaners.

WHAT IT WILL NOT DO

It will not damage the blades or handles.
It will not make any dust or dirt.
It will not cause any worry or trouble.
It will not want constant reading.
It will not soil the hands of the user.

Size—11 inches x 11 inches x 7½ inches high.
Weight about 12 lbs.
Over 25,000 sold in England last year.

WHAT IT COSTS IN COMPARISON WITH OTHERS.

Possessing all the merits and none of the faults of high-class, expensive machines, it yet compares favorably with all these in price, and the cost is not $25 or $30, but simply - - - - - £1

British-made throughout. Handsome Electro Coppered. Complete in wood box, with tin of Knife Polish. It has only to be seen to be at once appreciated and to command a ready sale.

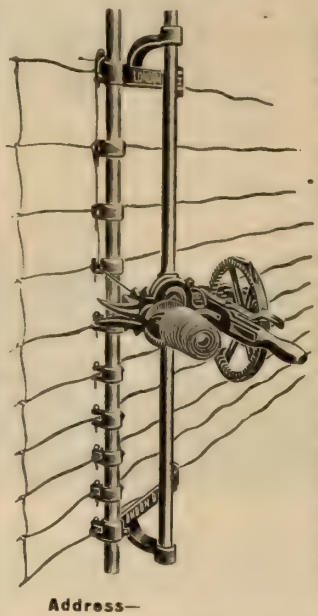
CANADA PAPER CO., Limited

TORONTO and MONTREAL.

A FACT SAYS WEBSTER, "IS THAT WHICH IS REALITY."



It is a fact that it costs more for labor to weave wire fences in the factory and stretch it afterwards than to do it in the field with a LONDON.

It is a fact that heavier, stronger and better built fences are being built all over this country with LONDON FENCE MACHINES.

It is a fact that there is as much profit to the dealer in selling LONDON MACHINES and COILED WIRE as in roll fencing.

The extra cost of roll fence is in the factory; the trouble with it is in erecting. It can't be done perfectly.

Sell your farmer friends a LONDON. It will build a perfect fence and win their approval every time.

Write for prices.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, FEBRUARY 28, 1903. NO. 9.

COMMENT ON CURRENT TOPICS.

"LITTLE drops of water, little grains of sand, make a mighty ocean and a beauteous land." Little grains of wheat are also as potent in the making of a great and mighty Canadian West.

* * *

The British Government last week had two narrow escapes from defeat, notwithstanding that the number of its followers in the House of Commons far exceeds those of its adversaries. But its army appears to be getting as undisciplined as that of the host which followed Xerxes into Greece to meet defeat instead of the anticipated victory. It was on a side issue that the Salisbury Government was defeated some years ago, and it would not be surprising if the present Administration met its fate from a similar cause if present auguries can be taken as a criterion.

* * *

The mobbing of Mr. Munn's, the erstwhile aspirant for political honors in North York, reminds one that our civilization has not yet outgrown the brute instinct of its youthful days. Fortunately, however, we seldom have these exhibitions of man's lower instincts in so pronounced a form.

* * *

In the three jurists which they have appointed to represent them on the Alaskan boundary commission, it is evident the United States feel they have three aces which cannot be beaten by any combination that Great Britain can put up against them. In Canada we are beginning to get suspicious. We fear that the cards have been stacked, and we are going to lose on the deal.

* * *

The Toronto man who was the other day sentenced to one year's imprisonment for voting for a dead man will be at least dead to the world for the period of his incarceration. And he will be buried alive, too.

* * *

One would judge from their speeches that the politicians deemed themselves the salt of the soil on which the industrial life of the country is developing so rapidly these days. But to many business men they appear to be as the tares which an enemy sowed while they (the business men) slumbered and slept.

* * *

"Ralph Connor," the novelist, said the other night that "Canadians had it in their own hands to make the country great." Certainly. Nations, like individuals, are the architects of their own fortune. In our schools, in our universities, in our warehouses, we cannot learn too thoroughly the art of how to build.

* * *

When Jack Frost relaxes his grip, the grippe appears upon the scene to afflict humanity.

* * *

The Canadian Manufacturers' Association demand that the tariff be taken out of politics. It will require a great deal of effort to convert the politicians to this way of thinking.

* * *

The farmers in Ontario want to hire men to work, and, judging from the revelations of the courts, the political parties in that Province are willing to hire men to vote.

* * *

Farm property in Manitoba increased $750,000 last year. But this was nothing compared to the increase in the bank account of the farmers in that Province.

* * *

Judging by the report of the Ontario Educational Department it would pay teachers much better to sow seed in stoney land than sow the seed of knowledge in the minds of offsprings of stoney-hearted penurious parents.

* * *

Wireless telegraphy promises to be so common before long that men may experience difficulty in dodging the message-bearing electrical waves.

* * *

The opposition to Mr. Brodrick in the House of Commons is probably giving him a more uncomfortable quarter of an hour than was the persistence of the Boers during the most unpleasant features of the late war. The Boers never at any time seemed to be in danger of putting him out of office, but there is certainly a possiblity of his opponents in the House of Commons doing so.

* * *

Mr. Tarte is to form a third party. Even should it consist of the ex-Minster of Public Works alone it is safe to venture the opinion that it will be a factor in Canadian political life.

* * *

The unseated Conservative member for Centre Bruce charges Hon. Richard Harcourt, Minister of Education, with having broken faith in regard to the saw-off deal. And he seems to have made out a rather strong case. The head of Ontario's educational system should try and show a better example to the 500,000 children that are under his care. Few of them can recognize the difference between [illegible] faith in political affairs and in [illegible] day affairs.

* * *

One of the excuses of the railway companies for the congestion of traffic is that they have not power enough. There are a good many people in Canada, on the

other hand, who hold that Parliament has given the railways too much power.

* * *

Now that the C.P.R. has purchased the Beaver Line of steamships, we expect to see them working like beavers to secure a good share of the Atlantic carrying trade.

* * *

It is possible that the 10 skeletons exhumed the other day at Ottawa are the remains of some of the politicians who disappeared from political life after the last general election.

* * *

Although the weather is cold in Manitoba, politics are getting pretty warm in that Province. Business men there should keep their heads cool notwithstanding.

* * *

In New Brunswick they are trying to determine who among the politicians are Conservatives and who are Liberals. In other parts of Canada a good many thinking men are trying to discover the line of demarcation between the respective political parties. So far they have met with little or no success.

* * *

The Northern Pacific Railway wants to enter Manitoba and build a system of 2,500 miles. If it will help build up Canada by all means let it come.

THE LATE A. B. JARDINE.

By the death of A. B. Jardine, founder and president of the A. B. Jardine Tool Works, the town of Hespeler, Ont., loses one of its pioneer business men, The late Mr. Jardine was in his 80th year, yet was, until a week previous to his death, connected with his firm, which he founded in 1870. He came to Canada in 1862 from near Glasgow, Scotland, and was from the first considered progressive and industrious. He had, in addition to carrying on his business, been an honored member of the town council and the school board. He leaves a widow and six children.

CATALOGUES, BOOKLETS, ETC.

BELL TELEPHONE CO.

The eastern division of their long-distance lines, the Ontario division and the Northwest division, are shown on the three calendars which The Bell Telephone Co. have issued for 1903. These maps should be of service to all business men. They may be had on application

The E. W. Gillett Co. Limited, are inquiring of wholesale houses for the names of their travelling and sales staff. They will soon have for distribution a handsome memo book which they intend to present to them.

DISCUSSED LEAD DUTIES.

A LARGE delegation representing the British Columbian lead mining interests met in Vancouver last week to meet the Board of Trade of that city. Among the visitors were: G. O. Buchanan, president of the Associated Boards of Trade of East and West Kootenay; J. A. Harvey, of Fort Steele, representing a number of the large lead mines of the Kootenay; John Burns, president of the Trades and Labor Council of Nelson; John Retallack, of Kaslo, president of the Ottawa silver-lead delegation; Dr. Hall, president of the Nelson Liberal Club; L. Pratt, secretary of the Silver-Lead Mining Association of Sandon; M. L. Grimmett, Mayor of Sandon, and P. Chapman, representing the Nelson Board of Trade.

The conference between the delegates and the Board of Trade was reported by The Province as follows: "The case of the silver-lead mine owners of the Kootenays and Slocan country is too well known to require any extended explanation. It was explained in a general way that the Canadian tariff on lead is so low that importations of that article from the United States are large and the result is disastrous to the Canadian product, which cannot be mined so cheaply as can the American article. Not alone are the mine owners of the interior adversely affected by the conditions now prevailing—the merchants and all who have interests at stake in the interior are faced with loss or ruin if the Dominion Government does not come to the rescue with a high protection tariff.

"If the cheaply mined and refined lead of the United States is not kept out of competition with the Canadian product the mines of the Kootenay, and especially those of the Slocan, will be closed down, the miners will leave the country, the merchants will follow the miners and within six months the towns in the silver-lead district will furnish excellent pasturage to dairy farmers; at least such are the predictions of several of the gentlemen now in the city as members of the delegation. The delegation wishes the moral support of the Vancouver Board of Trade in its request to the Dominion Government that the tariff on lead be increased and there is no doubt it will get it."

COMMUNICATION WITH P.E.I.

Editor HARDWARE AND METAL,—Your article of February 14, on "Communications with P.E.I." is very good and to the point, but not half strong enough. What will be a help to us is papers like yours going into the matter. We have been nine days at a time without a mail, and it is now more than a week since a steamer left our island. Our railway is piled up with freight awaiting a chance to ship. A lot of it perishable, such as fresh fish, meats, etc., as well as a lot of horses.

One of our winter steamers has been drifting about the Gulf helpless for more than six weeks without coal on board. The other, Minto, has been a week fighting to get to her, but is now helpless in the ice; and it looks as if they would remain there for the rest of the winter.

We were guaranteed, by the terms of Union, continuous steam communication with the railways of Canada. This we can never have except by a tunnel under the Straits. This can be done, so engineers say, at a cost of less than $15,000,000. A tunnel that will allow the largest train to pass through. This we must have or the terms of Union cannot be carried out. Even could steamers be built to fight the ice, they must be tied up in stormy weather. If Canada cannot fulfill these terms, she must do the next best thing, i.e., a cash consideration. I trust you will give the matter greater prominence and help along the cause.

Charlottetown, P.E.I., February 20, '93.

INQUIRIES ABOUT CANADIAN TRADE.

The following were among the recent inquiries relating to Canadian trade received at the Canadian Government office in London:

1. A Bristol firm, with large experience in the provision trade, desires to take up the agency for the sale of Canadian produce, and ask to be referred to houses needing such representation.
2. The names of leading Canadian flour millers are asked for by a gentleman who is about to join a firm of general merchants at Johannesburg.
3. A business house in Tunis is making inquiry for Canadian firms prepared to ship lumber, canned goods, etc., for which it is open to take up the agency.
4. A London firm doing business with Ceylon has made inquiry respecting the prospect in Canada for a trade in dessicated cocoanut.

[The names of the firms making the above inquiries can be obtained on application to the Editor of HARDWARE AND METAL.]

HAMILTON, ONT.

BUSNESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

JOHN ROTH, Jr., carriagemaker, of Clifford, Ont., is offering to compromise at 10c on the dollar.

Maxime Gelinas, general merchant, of Grand Mere, Que., has assigned to V. E. Paradis.

A demand of assignment has been made on Kennedy & Co., general merchants, of Brome, Que.

C. A. Choquette, general merchant, of Rapid River, Ont., has assigned to Howard Barnes, of Rainy River.

The assets of the general stock of Beaudoin & Croteau, Black Lake, Que., are to be sold on February 28.

John Dickinson, carriage and agricultural implement merchant, Summerside, P.E.I., is offering to compromise.

A meeting of the creditors of J. A. D. Landriault, general merchant, Hawkesbury, Ont., was held on February 20.

The meeting to appoint a curator of the general stock of F. X. Lamarre, St. Valier Station, Que., is called for February 27.

J. Bruyere & Fils, general merchants, Embrum, Ont., have assigned to M. J. Harty, and a meeting of their creditors will be held on February 28.

PARTNERSHIPS FORMED AND DISSOLVED.

J. G. McGowan & Co., general merchants, Rathwell, Que., have dissolved partnership.

Dinsmore Bros., hardware merchants, of St. Stephen, N.B., have formed a new copartnership.

Fortier & Corriveau, general merchants, Ste. Anne de Beaupre, Que., have dissolved partnership.

Bourne & Crowe, agricultural implement agents, Wallaceburg, Ont., have dissolved, and A. Bourne continues.

INCORPORATIONS AND CHANGES.

Jackson & Co., tinsmith, etc., Arnprior, Ont., have retired from business.

The Ewart Carriage and Wagon Works, Limited, Toronto, have obtained a charter.

A. M. Thompson, general merchant, of Marvelville, Ont., has retired from business.

The Munro & McIntosh Carriage Co., Limited, Alexandria, Ont., have obtained a charter.

Grundy Bros. & Co., stove manufacturers, Kincardine, Ont., have removed to Strathroy, Ont.

A. E. Howse, general merchant, Nichola and Princeton, will be succeeded by The A. E. Howse Co., Limited.

Eliza Jobin has registered as proprietress of the business of A. Barbeau, plumber and roofer, Quebec.

Kenny Bros., general merchants, Russel, Ont., have established a branch to their business in Marvelville.

The Crosby-Landers Co., Limited, shipping and general merchants, Port Maitland, N.S., are applying for incorporation.

SALES MADE AND PENDING.

The assets of The St. James Hardware Co., Montreal, have been sold.

George Middleditch, Ridgetown, Ont., is advertising his foundry for sale.

Kopal

A Good Honest Varnish at a Popular Price.

Kopal, the general purpose varnish, sells well and wears well. It is a splendid varnish to go after trade with. It wins the painter and the householder. It's a good, honest varnish at a popular price.

We have no product that we are more vigorously and systematically pushing to the front than Kopal. It is already a well-known varnish and we aim this year to bring it to the attention of every painter on the continent, through direct advertising and free distribution of samples.

Write us to-day, if you are not now handling Kopal, for prices and particulars regarding our advertising plans.

The assets of the general stock of A. J. Charbonneau, Arnprior, Ont., have been sold.

Aaron Graeb, general merchant, Sault Ste. Marie, Ont., has sold out to D. A. Gunn.

The estate of W. & J. Thompson, general merchants, Listowel, Ont., is to be wound up.

James Johnston, general merchant, of Farnworth, Ont., is selling out to Halley E. Thompson.

The general stock of A. A. Campbell, Apple Hill, Ont., is advertised to be sold on February 26.

Smith Bros., general merchants, of Arnand, Man., have sold their implement business to T. Branson.

The building and plant of Edward Murphy, carriagemaker, St. John, N.B., has been sold by mortgage.

The general stock of Frank Robitaille, Thetford Mines, Que., has been sold to Joseph Pouliot, D'Israeli, at 60½c. on the dollar.

DEATHS.

John Hansuld, hardware merchant, of Ethel, Ont., is dead.

E. Schmidt, hardwareman, of Sebringville, Ont., is dead.

Robert Shields, of Shields & Co., general merchants, Palmerston, Ont., is dead.

A. B. Jardini, of the firm of A. B Jardini & Co., manufacturers of blacksmiths' tools, Hespeler, Ont., is dead.

FIRES.

John Eynouf, carriagemaker, Strittsville, Ont., has been burned out.

A. Child & Son, hardware and stove merchants, have been burned out.

The match factory of E. Page, of St. Raymond, Que., has been burned.

F. G. Dupuis, general merchant, of Orleans, Ont., has been burned out.

Shildrick & Colver, hardware merchants, Waterford, Ont., have been burned out.

Brett, Jackson & Co., hardwaremen, of Orangeville, Ont., have been burned out.

J. England & Sons, general merchants and tanners, Knowlton, Que., had their tannery damaged by fire; insured.

A washing plant at Coal Dock, belonging to The Dominion Iron and Steel Co., Limited, Montreal, was destroyed by fire.

THE TRAVELLING MAN.

By [illegible] after the manner of E. W. [illegible]

I consider your the travelling man.
That jolly old best o' boade
Who [illegible] up and down the land
In petty garb arrayed;
Who playeth havoc with the hearts
Of many country belles,
And stoppeth like the prince he is,
At all the best hotels.

Now mark him as he sits him down
Outside the tavern door,
And lighteth up his good cigar,
Which cost 10c. or more;
And with his comrades gathered round,
He swappeth sundry lies,
Or at the village maidens fair,
Doth make the goo-goo eyes.

And presently he to the bar
With others doth repair,
And many high-balls will he take
To drive away dull care.
How would not such a life of ease
Appeal to anyone?
And would we all were travelling men;
Nay, wait a bit, my son.

Far in the morn ere dawn has come,
From bed ariseth he,
And dresseth in a chilly room
To catch the 5.03.
As breakfast is not ready yet,
He getteth on the train
And rideth down to Green's Cross road,
Perhaps in an hour or twain.

And there before the tavern stove
He warmeth up his legs,
And presently he sits him down
To hash or ham and eggs;
And when to work he goeth forth,
He finds to his amaze,
His customer has gone to town
To be there six or seven days.

He rusheth back into the inn
To make his get away,
And there, with shrinking heart, he hears
The landlord calmly say:
"Were you going east, my friend?
Well, you are left all right,
There ain't none other train that way
'Till 9.18 to-night."

So when at last the weary day
Hath dragged its leaden round,
Again the happy travelling man
Is at the station found.
And to him comes the ticket man
And cheerfully doth state:
"Just make yourself at home, old man,
Your train is three hours late."

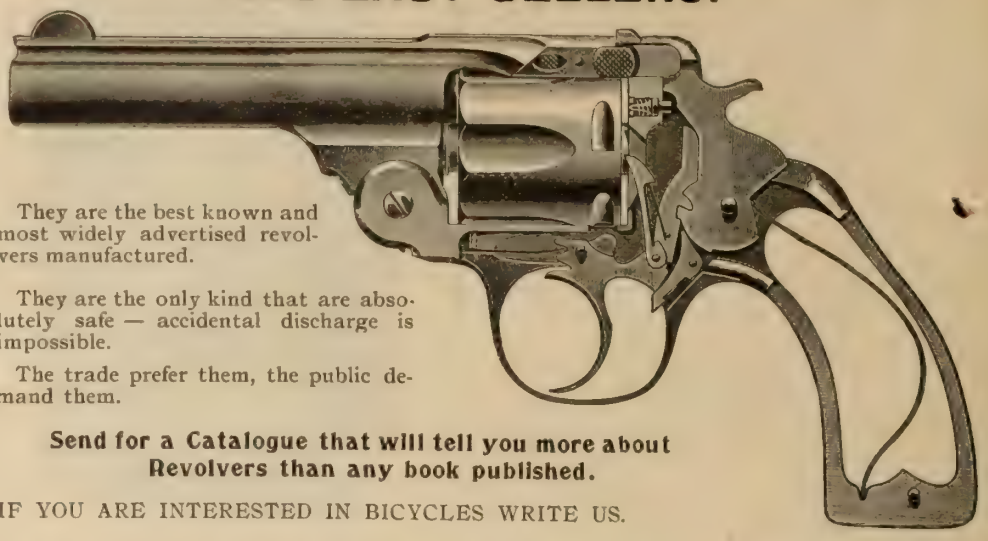
When on the morrow he awakes
Again at work to start,
He gets a letter from his house,
Which cheereth up his heart:
"We note that your expense account
Is running far too high.
We must have this curtailed at once
Or know the reason why."

Now, if his overcoat's at home,
The mercury will drop,
But if he's clad in winter clothes
It hove s near the top;
And all the nicest days come when
He's travelling on the train;
But if he has ten miles to drive
It's either snow or rain.

At length, the weary trip is done
And he is home once more.
He sees his wife an hour or so,
Then drops down to the "store;"
And pleasant words like these he hears:
"What, Bill! Why! home so soon?
We'll have your samples up in shape
To start to-morrow noon."

Ah! envy not the travelling man,
For though his job seems gay,
Despite his efforts, now and then
SOME work will come his way;
And when to you it seems his lot
Is one of joy alone.
Remember that the drummer
Has some troubles of his own.

IVER JOHNSON REVOLVERS
ARE EASY SELLERS.



They are the best known and most widely advertised revolvers manufactured.

They are the only kind that are absolutely safe — accidental discharge is impossible.

The trade prefer them, the public demand them.

Send for a Catalogue that will tell you more about Revolvers than any book published.

MACHINERY

THE WIRELESS TELEGRAPH.

WHEN a wireless message is sent across the ocean a wireless spark of high tension is made to snap between two brass balls, explains The Boston Transcript. The sparks may be said to make a spalsh in the ether, the high wire taking the place of the stone which, when dropped in a pond, causes ripples to flow outward in every direction. The electrical ripples similarly stream out from the wire in every direction at the speed of several hundred thousand miles a second.

The number of waves which stream from a Marconi pole is estimated at from 500,000 to 2,000,000 per second. These waves are not to be confounded with the air waves which cause sound, though, for the purpose of explanation, they may be compared to them. When a poker is struck, the vibrations of the steel rod transfer themselves to the surrounding air in the form of waves in the atmosphere. Wireless telegraphy waves, however, travel not by means of the atmosphere, but through the far more intangible substance, ether, which is supposed to fill all space and penetrate all matter.

Even in ordinary telegraphy, the currents flow through the ether surrounding the atoms of copper, rather than through the wire itself. In wireless telegraphy the current does not flow through wires, but from wires, using the all-pervading ether as a medium through which to flow.

Many years ago it was discovered that electricity passed through the space separating two long parallel wires. When a current of electricity was made to flow through one wire, a magnetic influence spread out from that wire, and on reaching the other, induced it in a state of electricity similar to the current flowing in the first wire. The current was transferred, as it were, across a bridge of magnetism.

The waves which flow from the transmitting station almost instantly reach the distant receiving wire, but as the waves are then feeble, and cannot operate any instrument, a "coherer" and "relay" have to be used.

The "coherer" consists of a quantity of metal filings, which remain separate from one another, and offer resistance to the passage of a current until the Hertzian waves strike the aerial. Then the filings press together, and the obstruction is bridged. The relay current can then act, and a strong current instantly flows through the circuit and operates the machine, which prints the code on paper tape.

It has been said that two stations might be placed back to back, and the waves made to pass completely around the world. This would require waves of very great length in order to overcome the great curvature of the earth.

The induction method was the one used by all the earlier experiments with wireless telegraphy, and it was not until Hertz published his experiments with the waves caused by the spark-gap method that Hertzian waves became the more popular field of work for electricians.

INSTALLING NEW MACHINERY.

The Collingwood, Ont., Shipbuilding Company are receiving the powerful machinery for their machine shop. Within the past few days the large steam rolls for the bending of boiler plates have arrived and are now being set up in the boiler shop. These are said to be the largest and most powerful in Canada and cost $6,000. To give some idea of their weight, The Collingwood Bulletin says that the largest of the three rolls weighs 12 tons and the others about six tons each. They will bend a steel plate 1½ in. thick as easily as a tinsmith's rolls will put a curve in a piece of sheet iron. The first large order on which these rolls will be put to work will be the boilers for the Crangle and Hagarty steamer, the material for which is already in the yards.

A lathe which will handle a piece of steel 16 ft. in length and 4 ft. square, and a powerful planer have also been received and are temporarily located in the east end of the boiler shop. On the completion of the machine shop these will be removed to their permanent positions.

In the powerhouse steam has been raised on the battery of boilers and as soon as the connections are completed it will be turned on the 400 h.-p. Corliss engine, which will supply the motive power for the electrical plant and air compressor.

Other machines received this week were nine electric motors, three of 10 h.-p., three of 25 h.-p. and three of 40 h.-p. Six of these were imported from Milwaukee and three were purchased from The Canadian General Electric Company. They will be used to drive the electric cranes, lathes, planers, drills and other machines. One of the three 35-ton cranes is on the way here and will be installed in the boiler shop immediately on its arrival.

THE BRITISH BICYCLE TRADE.

THE cycle trade of the past year was better than in 1901. The output of cycles was much greater, and the results more satisfactory. Low prices ruled in consequence of the severe competition, and the margin of profit was correspondingly small. Cycles up to 12 guineas by firms of long standing and good repute have met a ready sale, says Ironmonger, London.

The experience of recent years points to the conclusion that the future of the cycle business rests largely on a big output of machines at popular prices. Fancy figures for bicycles are no longer to be expected. A good serviceable machine, at from 10 to 12 guineas, will in future meet the public want.

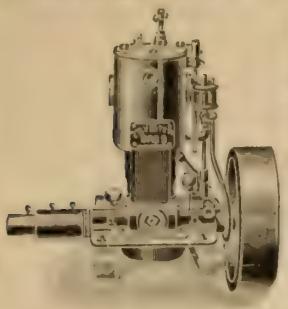
Gradually the number of firms is diminishing, many have undergone reconstruction and others are on the verge of doing so. Past experience has made this inevitable. That the majority of companies were over-capitalized is indisputable, and the lack of public confidence in them is shown by the share list.

In many cases ordinary £1 shares are quoted at 1s. and even less. Where companies with an enormous capital have not been producing large quantities of popular-priced machines, the plant and machinery have been "eating their heads off," and company managers who thus far have held aloof from reconstruction now confess this to be essential to good results in the future.

The outlook for 1903 is more hopeful than in 1902. Firms report 50 per cent. more orders in hand than they had this time last year. The continental trade is small, but better than it was, although the market there is very well supplied by the firms already established. The colonial trade is decidedly on the increase.

The motor industry is growing by leaps and bounds. Coventry is an important centre in this, as in the cycle industry, and, although one large company has made a heavy loss this year, the prospect is regarded as more hopeful.

THE SYLVESTER GASOLINE ENGINES AND LAUNCHES.



Awarded the Bronze Medal (the highest prize) at the Toronto Industrial Exhibition 1902. The simplest, most reliable, economical and substantial Engine on the market. Can be used any place, by any one, for any purpose. Sizes 1½ to 16 horse power, Stationary, portable, and marine. Also extra fine Gasoline Launches, best in the market. MACHINERY AND ELECTRICAL NOTES.

ARBY BROS. are building a tug 45 ft. long, 10 ft. beam and 5 ft. depth at Owen Sound, Ont. It is to steam [illegible] miles per hour and will cost about $1,500. This firm are also repairing several other craft at Owen Sound, Ont.

The Ottawa Milling Co. will build a short spur line to their mill in the spring.

The Brandon, Man., Machine Works Co. have orders for two 125 h.-p. boilers for A. Kelly & Co.'s flour mills.

An eight ton lighthouse top is being built for the Dominion Government by The Victoria Foundry Co., Ottawa.

A 12 h.-p. portable engine and boiler was shipped to The Syracusse Smelting Works, Montreal, by H. W. Petrie, of Toronto.

A 28 h. p. boiler, to build in brick, has been installed in the creamery of S. Price & Son, Toronto, by H. W. Petrie, of Toronto.

The employes of The Toronto Electric Light Co. held their first annual banquet at Webb's on Friday evening. It was an unqualified success.

A sand papering machine has been added to the plant of The Mendelssohn Piano Co., Toronto. This machine was purchased from H. W. Petrie, Toronto.

The by-law for the purchase of the Berlin, Ont., eltctric light and gas plants for $80,000, to be operated by the town, was carried on Friday, by a majority of 532.

The Victoria Foundry Co., of Ottawa, are turning out shafting and pulleys for The Fraser Lumber Company's new mill at Deschenes, Que. One of these pulleys costs $400.

A fine 16-in. swing x 6 ft. bed Porter lathe has been installed by H. W. Petrie, Toronto, in the plant of E. Housey, Toronto, for the manufarture of the "Superior" gasoline engine.

A correspondent to The Eganville Enterprise, says that a corundum mill, to produce 100 tons per day, will be built in Combermere, Ont., in the spring. The mill will be run by electricity and is expected to give employment to 400 men.

The Cataract Power Co., Hamilton, are preparing plans for an enlargement on an extensive scale of its plant at Decew Falls. General Manager Hawkins has announced that it has been decided to enlarge both the powerhouse and the canal.

John M. Moore, engineer, London, Ont., is calling for tenders for cast iron pipe, laying cast-iron pipe, valves, valve boxes, hydrants, brass fittings, stop-cock boxes, lead pipe, hardware, cylinder and engine oils, boiler compound, and lumber. Tenders must be submitted before March 1.

The Belleville, Ont., National Portland Cement Co., which are to build works at Point Ann, four miles from Belleville, awarded on Friday the contracts for $135,000 worth of machinery, consisting of 50 Griffin mills, 10 rotary kilns, 10 coolers, two clay driers and two stone driers.

James Shirriff, manager of The Brandon Machine Works Co., left last week for Toronto and other eastern manufacturing centres to buy new machinery for the company's establishment. Mr. Shirriff is accompanied by Wm. McClement, the foreman of the machine shop. They will be away about three weeks.

The Guelph and Georgian Bay Railway Co. will ask the Dominion Government for a charter to construct and operate a steam or electric railway from Guelph to Owen Sound or Meaford, or both, via Elora, Fergus, Arthur and Mount Forest; the building of a branch or radial lines from Guelph to Erin and Orangeville; authority to conduct a forwarding business, acquire and use docks and elevators, lay out parks and pleasure resorts, and produce and sell electricity is also wanted.

The conversion of iron into steel, as successfully experimented with some time ago at The Baldwin Iron Works, Ottawa, will commence next week, not as an experiment, but as a commercial enterprise, says The Free Press. This work would have been undertaken as soon as the invention proved a success, but a scarcity of raw material caused the delay. A large supply of crude iron has been received, however, and next week will see the new industry in operation.

CANADA'S IRON RESOURCES.

In commenting on the discovery of the iron deposits in the Moose Mountain range, The Iron and Machinery World, of Chicago, says: "The mineral resources of Canada have as yet been largely undiscovered, but as exploitation goes on, the fact is being disclosed that an immense wealth of iron ore underlies some of the vast solitudes of our northern neighbor. A new Vulcan is looming up in the higher latitudes, and is destined to be an imposing figure. What has been and is being done in the development of the mining properties is, so far, but a pioneer move to a new section of the empire of iron. Home and foreign capital is being heavily invested, the golden current running from Nova Scotia to the Moose Mountains, and to unsurveyed territory beyond. The Moose Mountain range is declared by experts to be the same as the Vermillion range, in age and formation, except that the ore in the one is a hematite and the other a magnetite. * * * * This latest Canadian discovery is of importance to the iron world irrespective of boundary lines, and will ultimately prove to be the basis of extensive operations."

BOOKLET FOR INVENTORS.

MARION & MARION, patent attorneys, of Montreal, have prepared a neat booklet for the use of their technical and industrial clients. It is literally teeming with information of value to persons desirous of securing patents on their inventions. Some of the facts and figures given are exceedingly interesting. For instance, the following facts should be known to everyone seeking a patent in Canada or the United States: "Many inventors believe that, when their application meets with difficulties in the Patent Office, it is because their device infringes on some prior patent; and that, should they obtain a patent for their invention, they thereby obtain the right to manufacture and sell the invention without reference to prior patents. This belief is a common source of patent litigation, which mignt be avoided by a better understanding of this fundamental point of patent law. The question as to infringement never arises in the Patent Office, nor does the grant of a patent convey any rights whatever to the patentee to shield him from the infringement of other patents. There is no doubt that a large proportion, if not the majority, of patented devices are in fact dependent on, or, as the technical phrase is, tributary to, other patents, and can be legally manufactured only by a license under such patents.

"The question of infringement is, on the other hand, properly independent of that of novelty, except in so far as the latter may be involved in the construction of claims. It is in the construction of claims that the most consummate judicial skill is required, just as their original composition is the greatest test of the technical skill of the solicitor.

Patent Office practice involves:

1. Caveats.
2. Novelty searches.
3. Original applications.
4. Rejected applications.
5. Forfeited or abandoned applications.
6. Reissue applications.
7. Disclaimers.
8. Appeals.
9. Interferences (disputes between rival inventors).
10. Conveyance of title.

Court practice involves:

1. Infringement opinions.
2. Validity searches.
3. Title searches.
4. Infringement searches.
5. Infringement suits.
6. Interfering patents.
7. Expert testimony.
8. Popular or "Qui tam" actions.

Much other information of equal value is given with this booklet, which, we understand, can be secured by readers of "Hardware and Metal" on request, for 10c.

The Chief Floor Hinge

This has been brought out to overcome the objectionable features of the floor hinges at present on the market, which made it necessary to cut a large hole in the floor to receive the hinge, and as all the working parts were beneath the floor, it was impossible to prevent water and dampness from destroying the mechanism. ***Our Hinge*** is secured to the surface of the floor after it has been applied to the door, always bringing the door in perfect allignment before it is fastened to the floor. The tension of the Spring is regulated at any time after the door is hung, permitting the swing of the door to be adjusted as desired. Ask your jobber to show you a sample manufactured by

THE RAILWAYS AND OCEAN TRAFFIC.

THE announcement that the Canadian Pacific Railway Co. has purchased the fleet of the Elder-Dempster Co. does not come as a surprise, for it has been well known for some time that the railway in question has been endeavoring to secure a line of Atlantic steamers. It is, however, none the less a matter of considerable interest and importance. For some years the C.P.R. has had a line of steamships on the Pacific coast, running from Vancouver to Hong Kong, Japan and Chinese ports. This line is subsidized by the Dominion Government, and the amount expended for that purpose in 1901, which is the last year for which we have any figures, was $73,000.

Ever since Mr. Morgan and his fellow-capitalists obtained control of so many of the regular steamship lines plying between this continent and Europe, making them, as it were, a continuation of the large railroad systems in the United States, with which the capitalists in question were connected, it has become evident that the Canadian railways must eventually secure steamships of their own, if they were to be in a position to compete with the railways to the south. Working along these lines, the C.P.R. has at last secured an important line of steamships, and will now be in a better position to meet the competition of United States railways and the steamship lines running from the Atlantic ports of that country controlled by the Morgan syndicate.

Although the Canadian Pacific Railway and the steamship lines, which the C.P.R. has now secured, are practically without any Government control, it is natural to infer that the Canadian transportation system will be very much improved, and that the country as well as the owners of the railways and steamships will receive benefit therefrom. Our trade has greatly increased during the last few years, as our readers are already well aware. Our foreign trade is now close upon $500,000,000 annually. This represents an enormous quantity of merchandise which must be carried by the steamships running to and from the Dominion. During the past 10 years the foreign trade has about doubled, but that is no criterion as to what we may expect in the future. In fact, there is every indication that the development of the next four or five years will very much exceed the ratio of the same period in the past. Our railway system is greatly expanding, and up to the end of the fiscal year, 1901, which is the latest year for which we have any figures, the mileage in operation was 18,294, while the freight carried aggregated 37,000,000 tons. The quantity carried now, however, must be far in excess of that of 1901, as everyone who is acquainted with the condition of traffic to-day must realize.

There is one feature in connection with the possession of the Elder-Dempster Line by the C.P.R. that is, perhaps, worthy of note. The Elder-Dempster Line has hitherto stood outside the combination or the conference of steamship lines, which controls freight rates. Just what the attitude of the C.P.R. towards the conference will be now that it has obtained control of the line will be watched with interest.

Now that the C.P.R. has a steamship line of its own, rumors are rife as to the intention of both the G.T.R. and the Canada Northern. It is said that the G.T.R. is endeavoring to secure the Allan Line, but, so far, nothing official has been given out either to confirm or to dissipate the rumor. It is more likely than not that the G.T.R. is endeavoring to place itself on an equal footing with the C.P.R. As far as the Canada Northern is concerned, it is claimed that J. J. Hill is at the back of the enterprise to secure a line of steamships to run in connection with that system, which is controlled, as our readers are aware, by Mackenzie & Mann.

A SPECIOUS TARIFF ARGUMENT.

A LETTER headed "Furniture Workers Robbed" recently appeared in a daily paper from its Ottawa correspondent. It gives a table showing the imports of furniture into Canada during the six years ending June 30, 1902. In 1897 the value of these imports was $285,512, while last year they had grown to $487,306. This is an increase of 75 per cent. This increase in the importation is the ground upon which the correspondent claims the Canadian furniture manufacturers have been robbed.

Turning to the trade and navigation returns, we find that, during the same number of years, our increase in the exports of furniture is 142 per cent., having been $115,863 in 1897 and $279,260 in 1902.

If the statement of the correspondent in question be true, and that the importers of furniture have been guilty of robbery, is it not equally true that the exporters of furniture have been accessories before the fact in assisting their customers in Great Britain and other countries who have bought our furniture, to rob the manufacturers of Great Britain?

There are undoubtedly items in the Canadian tariff which stand in need of revision, but it can scarcely be said that the tariff on furniture is of such a character as to permit the manufacturers to be robbed of the home trade, as the correspondent in question claims. The duty on furniture is 30 per cent.

As we have already said, there are certain items in the tariff which needs revision, but even if that governing furniture was one of them it would be utter folly to use such arguments as those advanced by the Ottawa correspondent in question and quoted widely by a number of newspapers.

Such arguments do the furniture industry more harm than good, and none generally realize it more than the furniture manufacturers themselves.

THE FACULTY OF TORONTO UNIVERSITY.

WE pointed out in last week's issue that the chief weakness in Toronto University was the Faculty. This weakness, if it is more evident in one department than in another, is in that of the Arts. As this is one of the chief, if not the chief department in the whole University system, it naturally follows that the whole University would be effected thereby. Not only is the Faculty in the department of Arts lacking in that individuality and force of character, which is so necessary to the turning out of efficient students in the strictest sense of the word, but it causes the University itself to be stamped with inefficiency by the great mass of people abroad.

Some one has recently said that what is wanted in the universities of this continent is a combination of the German and British university systems. The German system is professional, aiming primarily at the training of lawyers, doctors, etc., while the British system aims at the development of scholastic ideals.

The atmosphere around Toronto University has become decidedly professional, and throughout the country Toronto University has become associated in the minds of nearly everyone, as an institution for turning out lawyers, doctors, clergymen, and other descriptions of professional men. This belief may be exaggerated to some extent, but when one recognizes that every attempt to bring about a better state of affairs in the University is pooh-poohed and their suggestions that more practical works should be done are termed vain and vulgar, it is not surprising if people do get exaggerated views.

As a result of the spirit which predominates within the institution, it must be evident to even the most cursory observer of the trend of university affairs throughout the world, that Toronto University is out of touch with modern thought and modern ideas as to the service, which such an educational institution can render the country.

Throughout this continent it is recognized to-day by nearly all thinking men that a university is failing in its purpose when it ignores the importance of trade and commerce. Throughout the United States and to some extent in England, it is repeated being pointed out by even men in connection with university work, the necessity of making the university attractive to men who are designed for commercial life, as well as to men designed for the professions. Principal Gordon, the new head of Queen's University comes to us fully impressed with the importance of this. In his inaugural address at Kingston the other day, he was very emphatic upon this point. "It is often asked" he said, "Has the university no special help for young men to look forward to commercial life? We know that the manufacturers are dependent upon the investigation of science. The pulp mill and the iron works require their chemists. The university laboratory, if properly equipped, should be a field for research that tells on the commerce of the country. All this we recognize, but if there comes to us a young man who desires to fit himself for dealing in a large and effective way with the work, and problems of a mercantile career, what can the university offer him? This, at least, we can do. We can select for him from our list of subjects a course of studies that would be specially suited to prepare him for commercial life."

Principal Gordon evidently recognizes the necessities of the case.

A newspaper that cannot be accused of being unfriendly to the University of Toronto is The Toronto World, and yet it, in a recent article on the University affairs, said: "We have no leisured class in this country, and the education must fit men for their aim in life, especially for scientific farming, mining, pharmistry, the building of railways and bridges, and all the work which accompanies the development of a new country."

It is true that Toronto University, on account of the strength of opinion among the commercial interests in this country, has established a commercial course. But what is it? As we pointed out last week, it has one student, and it is scarcely likely to have any more as long as the Faculty remains as it is and the sentiment in the University is so anti-practical, and the professional atmosphere so evident.

That the Toronto University is not only out of touch with the sentiment and spirit of to-day, but we are reminded by a perusal of a report issued 57 years ago by the father of our educational system in Ontario, namely, the late Dr. Ryerson, that as long ago as that views were held which were in advance of those held even to-day by the authorities of Toronto University. From his report we extract the following which speaks for itself:

> By education, I mean not the mere acquisition of certain arts, or of certain branches of knowledge, but that instruction and discipline which qualify and dispose the subjects of it for their appropriate duties and appointments in life, as Christians, as persons in business, and also as members of the civil community in which they live.
>
> The branches of knowledge, which it is essential that all should understand, should be provided for all, and taught to all; should be brought within the reach of the most needy, and forced upon the attention of the most careless. The knowledge required for the scientific pursuit of mechanics, agriculture and commerce must needs be provided to an extent corresponding with the demand and the exigincies of the country, while to a more limited extent are needed facilities for acquiring the higher education of the learned profession.

Dr. Ryerson, it will be noticed, placed first in importance "the knowledge required for the scientific pursuit of mechanics, agriculture and commerce"; and that relating to the learned professions be placed second. Toronto University to-day reverses the order, although knowledge for the "scientific pursuit of mechanics, agriculture and commerce" was never required more than it is to-day.

The trouble in the Toronto University is that it is trying to live on its past. If it is to be such a force for good in the life of Canada as it was 10 or 12 years ago, it must come out from the narrow and exclusive position which it now occupies. But before it can do this we fear that there will have to be a complete remodelling of the Faculty and the system under which the University is conducted

THE PIG IRON SITUATION.

Pig iron is, at the moment, of about the same importance to the average manufacturer as coal was a few weeks ago to the average householder — needed, but hard to get.

The total production of pig iron on this side of the Atlantic, curtailed, as it has been, by scarcity of coke, has not been nearly large enough to supply the demand. Consequently European pig iron, principally English and Scotch, has been imported to a much larger extent than usual.

It will probably be some time before No. 1 Canadian iron will be freely offered. The Hamilton furnace is being relined, and will not be in operation for some days to come. The other Canadian smelters have sold their No. 1 product some time ahead, and are paying more attention to their grades for mixing to supply spot orders.

INDUSTRIAL GOSSIP

THE employes of The McLaughlin Co., Limited, Oshawa, Ont., struck for an advance of 20 per cent in their wages last week. The works are running with non-union men.

The Grundy Co., from Kincardine, Ont., are engaged in installing their stove foundry plant in Strathroy, Ont.

Hon. E. G. Prior, Premier of British Columbia, has declared himself as favorable to grants of further subsidies to railways.

The value of implements and tools exported from Great Britain during last year was £1,570,255, as compared with £1,491,984 in 1901.

The Klondike Mines' Railway may be extended from its present terminus to Gordon's Landing, on the Stewart River, a distance of 85 miles.

During the year just closed Great Britain exported £2,835,905 worth of telegraphic wires and apparatus. In 1901 they exported £3,147,985 worth.

Toronto machinery blacksmiths now work 55 hours a week, having a half-holiday on Saturday. They are now talking of demanding a nine-hour day.

John R. McLean, af Ottawa, says that lumbering operations are exceedingly active in Northern Ontario and Quebec, and would be more so but for the scarcity of men.

Among the new buildings to be erected in Winnipeg this year will be a large moulding shop by The Vulcan Iron Co. on their premises adjoining the C. P. R. tracks.

Two new factories are to be built at Medicine Hat, N.W.T. The Medicine Hat Milling Co. have material on the ground for a new building. E. Bentley is putting up a planing mill and sash and door factory.

The Deering Harvester Works at Hamilton are rapidly nearing completion. The management state that 4,500 people will be employed by these works this season, and that 10,000 will be ultimately employed.

Thos. Ronaldson & Co., of Rotterdam, Holland, have announced that they will run a regular line of steamers between Rotterdam and Montreal, calling also at Quebec. The first sailing from Rotterdam is on April 15.

An Ottawa despatch says that the Canadian Minister of Railways and Canals will again call for tenders for 25,000 tons of steel rails for the Government railway. Neither of the Canadian steel rail mills will bid on the tender.

Coke is being imported from the United States for the British-Columbian smelters, owing to the shortage of Canadian coke, caused by the miners' strike. The production of ore at the big mines is greater at present than for a long time past.

St. Thomas, Ont., council have been asked to loan $20,000 to The Oshawa Canning Co. The company agree to spend $53,000 in land, machinery and buildings, and to employ 150 hands for eight months of the year and 40 for the other four months.

A Kingston, Ont., despatch says that owing to the lack of machinists through the departure of the Germans, The Kingston Locomotive Works Co. have had to discharge over 100 laborers. It is expected that 60 more German machinists will be here next week.

Fire did over $150,000 damage to The Dominion Iron and Steel Company's washing plant at Coke Ovens, N.S., last week. The building was filled with valuable machinery, the motive power alone consisting of 13 motors and two engines. All this was destroyed. The loss is covered by insurance.

J. J. Banfield, Vancouver, stated last week that he had sold property in that city to a purchaser, who, intends to erect a brick block on the land fronting on Carrall street, and in the rear he will erect another brick building to accommodate a rice mill which he proposes to instal. The plant for the rice mill will cost in the neighborhood of $3,000, and while at first only the cleaning of rice will be performed, it is intended that the grinding of that cereal shall be commenced at no distant date.

In referring to trade conditions in British Columbia, The Vancouver Province says: "Little is known concerning the possible duration of the miners' strike but the merchants of the interior and business men generally in that section of the country hope it will be terminated shortly. The great drawback of the mining districts of the interior is that no sooner does the country recover from one labor trouble than another crops up and prosperity receives a setback which it only recovers from after the lapse of considerable time."

NEW FACTORIES FOR OWEN SOUND

Among the buildings that will be erected in Owen Sound for industrial purposes this year are The Ontario Linseed Oil Works, The Canadian Heating and Ventilating Foundries, The Owen Sound Iron Works Company's foundries, extensive additions to The McLauchlan & Sons' Company's factories, additions to The Owen Sound Fruit Packing Company's warehouse for cold storage purposes, an addition to The Grey & Bruce Cement Works, and a corn grinding mill for Chandler & Co., in all probability. Others will doubtless develop as the summer approaches, but these alone represent an expenditure of about $200,000.

COMPANIES INCORPORATED.

The Munro & McIntosh Carriage Company, Alexandria, Ont., capital, $250,000. Provisional directors: Hugh Munro, John McIntosh and J. F. Smith, all of Alexandria, Ont.

The Darling Co., Limited, Sandwich, Ont.; capital, $100,000. Provisional directors: F. W. Wheeler, T. J. Austin, A. T. Pitts, G. F. Clark, of Detroit, Mich.; and S. A. King, Windsor, Ont.

Peerless Cash Register Co., Hamilton, Ont.; capital, $100,000. Provisional directors: S. H. Pocock, A. G. Russell, of Hamilton, J. M. Staebler, Berlin; H. W. Bickell and James Curry, Toronto.

The Brown Manufacturing Co., Midland, Ont.; capital, $40,000. Provisional directors: James Brown, W. H. Bennett, Moses Moses, A. Jackel and William Peters, all of Midland, Ont.

The Shevlin Clarke Co., Rainy River, Ont., lumber dealers; capital, $200,000. Provisional directors: T. H. Shevlin, E. L. Carpenter, H. C. Clarke, all of Minneapolis, Minn.

The Coronation Gold Mining Co., of Ottawa; capital, $100,000. Provisional directors: A. W. Fraser, Jno. Fraser, J. McBain, H. A. Burbidge and A. A. Fraser, all of Ottawa.

The Ottawa Fish and Game Co., capital, $25,000. Provisional directors: G. S. Johnston, W. Thompson, W. J. Johnston, all of Ottawa.

The stock of The St. Catharines Mineral Springs and Sanitarium Co., Limited, is increased from $40,000 to $[illegible], and The Woodstock Wire Mats Co., Limited, from $75,000 to $[illegible].

MARKETS AND MARKET NOTES

QUEBEC MARKETS

Montreal, February 27, 1903.

HARDWARE.

EVERYBODY in the wholesale hardware trade complains of being pushed with orders at present, and not a few of them are working every night in order to keep from getting too far behind with the shipment of goods. A new list has been issued for horse pokes, and the price now quoted for "Champion" and "Dictator," is $4.50 and for "Climax," $6. The discount is 10 per cent. on all kinds. Plumbers' oakum has advanced 50c. per 100 lb. There seems to be a scarcity in bolts and nuts, and one Montreal house found great difficulty in filling an order for immediate shipment. Rumors are afloat of an advance in locks of all kinds and front door sets, the scarcity of pig iron being the reason given by the manufacturers. We might say that the goods moving briskly for prompt shipment are sap spouts, sap pails and sap bits; while those for spring delivery are hay carriers and forks, harvest tools, lawn mowers, grass shears, freezers, ice tongs and refrigerators. There has also been an advance of from 5 to 10 per cent. in the price of horseshoes. Attention might also be called to the price list of cant hooks, which appears below. We quote:

CANT HOOKS.—The following prices are quoted for cant hooks: No. 12, $10; No. 8, $11.50; No. 8a, $11; No. 2, $12; No. 7a, $16; No. 6a, $14.50; No. 5a, $11.50.

LAWN MOWERS.—There is a brisk demand for lawn mowers for spring shipment. Prices are: 10½ in. wheel x 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—The market remains steady with a fair demand. We quote: $2.80 per 100 lb. f.o.b. Montreal; $2.45 f.o.b. Cleveland in carlots of 15 tons; $2.67½ f.o.b. Cleveland in smaller lots.

GALVANIZED WIRE.—Several inquiries were received during the week for future delivery. Prices are unchanged. Our quotations follow: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—The prices remain unchanged and the demand is limited. We quote: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FENCE WIRE.—There is a good trade being done for spring shipment. The discount remains at 25 per cent., with the following extras: 1 and 2 K. hanks, 25c. per 100 lb.; ½-lb. hanks, 37½c. and ¼ lb. hanks, 50c.

BRASS AND COPPER WIRE.—An advance of 2½ per cent. is noted in brass and copper wire, and the discount is now quoted at 60 per cent.

FENCE STAPLES.—There is a brisk demand and the prices are firm. We quote $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—A good trade is doing at unchanged prices. Our quotations

SAP PAILS AND SPILES

STRAIGHT PATTERN

These goods will be needed before long, and your customers may ask for them any time now.

If you require either spiles or pails, we can ship you any quantity the same day the order reaches us.

FLARING PATTERN

Sap Pails—Made in six sizes in both straight and flaring patterns.

"EUREKA" CAST IRON SAP SPILES.

The superiority of these spiles over all others is well known to the trade.

Tinned and Galvanized Iron in the following sizes and Guages, for sap pans, always in stock:

TINNED IRON	GALVANIZED IRON	
48 x 96 x 20	48 x 96 x 16	
48 x 96 x 22	48 x 96 x 18	PROMPT
36 x 84 x 22	48 x 96 x 20	SHIPMENT
	48 x 96 x 22	GUARANTEED.

are still as follows: Carlots $2.40 and small lots, $2.45 per keg f.o.b. Canadaque, Montreal, London, Hamilton, Toronto, Brantford, Windsor Ont., and St. John.

HORSE NAILS.—The prices remain the same as last week, but are reported to be very firm. "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off. "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—The demand is steady and the prices have advanced. We quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.40; No. 1 and smaller, $3.65; snow pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90. X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.55; No. 1 and smaller, $3.80; featherweight, all sizes, 0 to 4, $5.10; toe weight, all sizes, 1 to 4, $6.35. Shoes, more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—Trade is gradually increasing. The discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 15 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—A scarcity is reported and the prices are firm this week. The discounts are quoted as follows: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent., machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¼c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb is allowed.

SCREWS.—The market is more active than it was a week ago. Quotations are as follows: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—A fair trade is reported at unchanged prices. Our quotations are: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 10½c.; single lathyarn, 10c.

BUILDING PAPER.—The trade report a bright outlook for building paper during the coming season. Prices are unchanged. We quote: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c. per roll; 3 ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c per roll; tar sheathing, 15c. per roll; dry fibre, 55c per roll; tarred fibre, 60c. per roll, O K and I X L, 65c per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c per roll.

SCREEN WIRE CLOTH.—There is a brisk demand for screen wire cloth at $1.40 per 100 square feet.

FIREBRICKS.—The market remains unchanged. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—There is very little doing in cement as yet. Quotations are: Canadian cement, $1.90 to $2.25; German,

In the Good Old Summer Time
you can sell a man any old kind of a pump.
But in the hard winter season, if he finds his pump frozen every cold day, he will not think very much of the man who sold him that pump.
Sell McDougall Anti-Freezing Pump all the year round and you will find that the sale of a good pump will bring about the sale of a good many other things.

OPEN HEARTH STEEL

$2.20 to $2.30. English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per barrel ex-store, and American, $2.10 to $2.20 ex-cars.

SNOW SHOVELS.—The season is about over and a small stock will be carried over. We quote: "Habitant," $2.25 to [illegible]; "Victor," 40 per cent. off; steel railroad shovels, 18 and 5 per cent. off.

FIRE SHOVELS.—A few small orders were booked during the week for immediate shipment. Discounts are: No. 70, 38½ to 40c. per doz.; No. 55, 55 to 60c.; No. 57, 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52, No. 11, $1.82.

COAL HODS.—The demand for coal hods is quiet and the narket prices are as follows: Japanned, 16-in., $4.50 per doz.; 17-in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—There is a steady trade doing. We quote: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dashboard, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The metal market is without feature this week, other than the scarcity of pig iron. Dealers claim that unless relief is forthcoming in all probability an advance will take place, which will necessitate an increase in all goods manufactured from iron. The copper market continues to be firm, both locally and throughout the United States. An unusual amount of coil chain is being sold for the coming lumber season, a great quantity being used in rafting logs. There is nothing to report in regard to the foreign market, as no changes have been noted during the week. Canada plates seem to be easier and are in good demand. We quote:

BAR IRON.—There is a brisk demand for bar iron and some lengths are reported scarce. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS.—The market is steady and a fair trade reported. We quote: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 21 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—A steady sale is noted in galvanized iron. Our quotations are as follows: No. 28, Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—There is a good movement in this market. Composition and waste are being sold at 8c. and ordinary at 7c. The discount is 27½ per cent.

IRON PIPE.—The spring business is brisk and prices firm. Our quotations are as follows: Standard pipe per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1-in., $5.20; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in.,

S. F. Bowser & Co.
Factory: Fort Wayne, Indiana.
65 FRONT ST. EAST, TORONTO

$7.55 ; 1¼, $10.55 ; 1½, $12.75 ; 2-in., $17.60. Galvanized, ½, $5.20 ; ¾, $6.65 ; 1 in., $9.55 ; 1¼, $13.25 ; 1½, $16; 2 in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—The market is reported to be firm and sales good. We quote as follows: Coke, $4.25 to $4.50 and charcoals, $4.75 to $5.

SOIL PIPE AND FITTINGS.—A large number of orders are being booked for spring delivery. The discounts are: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—There is a good demand for pig iron, but the scarcity keeps dealers from accepting large orders. The market price is very firm. We quote $23.50 to $24.50 ex-store Montreal, and an advance is looked for.

INGOT COPPER.—The ingot copper market is also very firm, and our prices for this week are $14 to $15 per 100 lb.

INGOT TIN.—There is a good movement in tin on account of the rumors of an advance in price. We quote $33 to $33.50 per 100 lb.

PIG LEAD.—The market is steady. We quote $3.10 for carlots and $3.25 for less than carlots.

STEEL.—There is only a fair trade reported. We quote as follows: Mild, $2.05; sleighshoe, $2.10 to $2.20 ; tire, $2.15 to $2.25 ; spring, $2.85 to $3 ; reeled machinery, $2.75 to $3 ; toecalk, $2.60 to $2.75 ; machinery (iron finish), $2.10 ; mild steel, $2.05 ; sqdare harrow, $2.15.

TOOL STEEL.—A good demand continues and the prices are firm. We still quote: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade ; Jessop's, 13c.; Leonard's, 7½c.; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES.—The local market is reported to be active. Prices are: 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35 ; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—We quote $7.50.

COIL CHAIN.—A brisk demand is reported and dealers say the business is larger than for years past. We quote: No. 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼ in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25 ; ⅜, $4.25; 7-16, $4 ; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75; ¾, $5 to $5.20; ⅞, $3.30 ; 1-in., $3.15 to $3.25. In carlots an allowance of 10c. is made.

SHEET ZINC.—The market is quiet and the prices are firm at $5.75 to $6.

ZINC SPELTER.—There is a fair trade doing at $5.25.

SOLDER.—The demand is brisk at last week's prices. We quote: Bar solder, 20c. and wire solder, 18c.

SCRAP METALS.

The trade generally is brisk and prices steady. Dealers report more goods to hand from small dealers than during January and expect to receive some large shipments as soon as the roads in the country are in better shape. Our quotations are now as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50 ; No. 2, $7.50 per ton ; machinery scrap, $17.50 to $18 ; stove plate, $13,; malleable and steel, $6 ; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

RAW FURS.

Offerings in all seasonable lines of raw furs have come in satisfactorily. There have been no changes in prices. We now quote:

HIDES.

There is very little prime stock coming to hand, and it seems to be very difficult to secure anything but grubs. We now quote: No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c.; calfskins, 8 to 10c. and lambskins, 75c.

MONTREAL NOTES.

Horseshoes have increased from 5 to 10 per cent.

An advance is looked for in the price of all kinds of locks.

The scarcity of pig iron seems to be the topic of conversation this week.

THE ROOF

Gets the worst of it.

There's no shelter for it. It shelters the rest from the elements. That's why every one needs the very best shingles.

EASTLAKE SHINGLES

are absolutely fire, lightning, rust and leak proof, and easy to apply.

They've long since been proved the most reliable, perfect and longest-lasting kind to be found.

With them in stock you're certain of satisfied customers and increased business.

ONTARIO MARKETS

Toronto, February 27, 1903

HARDWARE.

THE volume of orders coming in this week is not been up to the high standard set last week. In fact, while there is a fairly large business being done for future delivery, orders are pretty well booked up. Shipments have not been as large as they are likely to be in a few weeks, yet, there is a good movement for the end of February. The lines moving comprise a general assortment of hardware. Trade with the lumber camps seems to be about over for the season. The demand for wire nails, which was so excessive last week, has fallen off, as the trade seem to have satisfied their requirements pretty generally. Building paper is selling particularly well. Brass goods, range boilers and other plumbing and heating lines have furnished many large orders to the jobbers. The prices throughout are well maintained, yet, there is not, at the moment, any tendency towards higher prices.

BARB WIRE.—A few orders are still being booked, but the bulk of them seem to be in. The base price is quoted as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

COIL SPRING WIRE.—Business for spring delivery is well in, but some letter orders are still being received. Prices are steady. Quotations are as follows: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

GALVANIZED WIRE.—A few orders are still coming in, with prices steady. We quote: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—A fair trade is doing for spring. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—Business has fallen off from last week, but a fairly good movement is still reported. It is thought that trade is about booked for the season now. There is no change in the prices We quote: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—There is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—Quite a few are going out. Prices are steady. Discounts are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent. and "Countersunk" head, 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—The demand continues fairly large. Our quotations are as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes $3.70; light steel shoes, $3.55; feather weight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—A fairly good trade is doing. Prices are unchanged. We quote as follows: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS.—The demand keeps up satisfactorily and quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—The demand keeps up nicely. The prices are unchanged. We quote: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Quite a number are still going out, yet the trade seems to be pretty well booked up. Discount is 45 per cent. and the list price has been reduced $3 per dozen for Olds' good, $2 for Gray's and $1 for Burns'.

ROPE.—There is no change. The demand for immediate shipment is quiet. A few orders are coming in for later delivery. Prices are unchaged this week. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—No shipments are yet being made. There is no change in the discounts, which remain at 60 and 10 per cent.

LAWN MOWERS.—Business is about completed. Prices are firm. We quote: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

BRASS AND COPPER WIRE.—The advance of last week is well maintained, the discount being still 60 per cent. off.

BRASS RODS AND TUBING.—A good, steady trade is doing. We quote: Tubing, 3-16, 50c.; ¼, 35c.; 5-16, to 2 in., 28c. Pipe, ¼, 35c.; ⅜, 28c.; ½ to 3 in., 25c.

BUILDING PAPER.—The demand keeps up excellently. Prices are steady, and quotations are as follows: Dry sheathing, grey or straw, 40c. per roll; tar sheathing, grey or straw, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll.

RANGE BOILERS.—Prices are reduced 50c. for smaller sizes. This reduction, it is understood, is made to meet outside competition. There is an active demand. We quote: 18 and 30 gal., $5.50; 35 gal., $6.50; 40 gal., $7.50; 52 gal., $12.50; 63 gal., $19; 82 gal., $23; 100 gal., $31 and 120 gal., $37.

SCREEN DOORS.—Orders are moderate. Prices are steady. We still quote: Screen doors, common, two or three panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT.—The trade are now buying freely with prices firm throughout. We quote as follows: Canadian Portland, $2.40 to $2.50; hydraulic, $1.35 per bbl.

METALS.

If other proofs were lacking, the continued activity in the metal market, the heavy purchasing by all classes of manufacturers in every part of the Province, would be sufficient guarantee of the satisfactory business conditions existing throughout Ontario. The demand for pig iron is as pressing as ever, and agents of the foundries are finding trouble in satisfying their customers. The sales of steel are fully up to the usual, while brass, copper, tin and black sheets are in steady request. Manufacturers of iron pipe are having difficulty in filling orders, and as some of the jobbers here are short of stocks, prices are firmly maintained. The foreign tin and copper markets have risen in the week, so prices of these lines, also of solder, have advanced here. Some sizes of iron pipe are also dearer. Other lines are firm.

PIG IRON.—The scarcity of Canadian pig is causing a heavy import of English iron, which is being used in mixing with the native product. Results of this mixing have, in some cases, been eminently satisfactory; in other cases, trouble has arisen. There is little No. 1 offering, but a special grade is being offered by Canadian furnaces at $22.50 delivered in Ontario, which is mixed with English iron delivered at about the same price. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—The demand is about as usual. We quote from $2 to $2.25 at Toronto.

TOOL STEEL.—The activity keeps up. The prices are firm. We quote as follows: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8c. to 9c.; Park's "Silver," 12 to 14c.; Park's Special," 15 to 20c.

MILD STEEL.—Prices are well maintained. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—No change, and we quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—Sales are above the usual and prices are well held to, and the base price is quoted as follows: $2.05. For extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—The demand continues excellent with stocks liberal. Prices are steady. We quote: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—A quiet feeling is manifest. Prices in England are firm. We quote: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—Prices are steady. A good, active demand is noted. Our quotations are as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—A strong demand is reported. The prices have fluctuated on the English and United States markets, but have now stiff-

ened up. Last week's advance of $1 is maintained. We quote $32 to $33 per 100 lb.

TINPLATES.—Business continues active and prices are unchanged. We quote as follows. Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER. Ingot is still in strong demand. Prices are advancing daily in New York. Sheet is in good request and keeps firm. We quote: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS. Unchanged. The discount is 15 per cent.

LEAD. The activity is still manifest. Prices are unchanged at $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE. Several sizes of pipe have been advanced as a result of the scarcity. As conditions are as bad in the United States as they are here it will likely be some time before there is any considerable surplus of pipe. We now quote per 100 ft.: Black pipe, ⅛-in., $3.25; ¼ in., $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾ in., $3.65; 1 in., $5.20; 1¼ in., $7.35; 1½ in., $8.95; 2 in., $12.55; 2½ in., $21; 3 in., $25; 3½ in., $32; 4 in., $38.

ZINC SPELTER. This is in good demand. Prices are steady at 5 to 6c. per lb.

ZINC SHEETS.—There is an excellent demand. Prices are steady. We quote the base price as follows: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER.—A fair amount of business is being done. Guaranteed half-and-half is quoted at 18 to 19c. and wiping at 17 to 18c.

ANTIMONY.—Business is in small lots. The price is steady at $9 per ton.

PETROLEUM.

The market is fairly steady, but business is falling off somewhat. The Union Petroleum Co.'s prices are as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

HIDES, SKINS AND WOOL.

HIDES.—There is a good supply and no change in the market. We quote as follows: No. 1 green, 7½c.; No. 2, green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS.—We quote: Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.

SHEEPSKINS.—Fairly good supply. We quote 80 to 90c.

WOOL.—The prices are unchanged. We quote: Unwashed wool, per lb., 8½ to 9c.; fleece wool, 16c.; pulled wools, super., per lb., 15 to 17c.; ditto, extra, 19 to 20c.

TALLOW.—Tallow is very scarce. We quote 5¾ to 6c. per lb.

SEEDS.

There is practically no change in the market this week, except in alsike, which has dropped 75c., and we quote as follows: Alsike, prepaid aboard at outside points, per bush., $5 to $6.25; red clover, prepaid aboard at outside points, per bushel, $6.50 to $7.25; timothy, prepaid aboard at outside points, per bushel, $1.75 to $2.25.

MARKET NOTES.

Ingot copper is 25c. higher.

An advance is noted in many sizes of iron pipe.

Range boilers, from 18 to 40 gal., are 50c. more.

NOVA SCOTIA MARKETS

Halifax, February 21, 1903.

THE wholesale houses are very busy just now, both purchasing and receiving stock for the spring trade, and, in many cases, it is found that the indications are that duplicate orders will have to be given before all the spring orders can be filled. At the same time, considerable business is being done in sorting up orders. The travellers have been pretty thoroughly over their territory, and the accumulation of spring orders is much greater than at this time in the season last year or even in 1901, which was an exceptionally good year. There is no business done in Halifax to-day that has a brighter outlook ahead for spring and summer business than the hardware line, and preparations are being made accordingly.

* * *

The two lines which appear to have the greatest influence this season are builders' materials and ship chandlery. All over the Province there is a big boom in contemplation, and for the last year or two the shipbuilding industry, which had largely decayed, has been revived. Not many large vessels are being built, as in the olden times before the iron and steel vessels came into the field, but many medium and small-sized schooners are being built. These are principally for the fisheries, either on our own coast, the Banks, or for sealing in the southern seas. All this revives the trade in cordage, canvass, chains, anchors, rigging and other outfitting.

* * *

The course of turpentine, which has been upward for some time, is still in the same direction, and the $1 mark has already been reached for small quantities, 95c. being the quotation by the barrel. Linseed oil, a week ago, had a downward tendency, on a reported reduction in Montreal of 2c., but no changes have been made here. The quotations are: 75c. for raw and 78c. for boiled, in barrels, or 5c. additional in smaller quantities. Varnishes, in which turpentine is largely used, are all higher at first hands, but only a slight advance was made in the local market, as the dealers have considerable stocks on hand or ordered before the turpentine advance. As stocks are reduced later, the full quotation may have to be demanded.

* * *

There is a general tendency to an advance in all lead products, resulting from natural causes, as well as from the report of the formation of a "lead trust" in the United States. Prices here have not been materially altered as yet. Considerable business is being done in sheet lead, the quotations being $4.25 for heavy rolls. Pig lead, which recently advanced 25c., is now quoted at $3.75 to $4.

* * *

In builders' materials there has recently been some changes, and all prices are very firm. Dry sheathing advanced 5c. per roll. Portland cement is quoted 10c. advanced. Belgian is quoted at $2.40 and English at $2.75.

FOREST CITY GOSSIP

[illegible] Hardware and Metal."
[illegible] February 26, 1903

"Busy" I should judge. And that [illegible] it went as we passed from [illegible] hardware firm to another. [illegible] shipping room looked like business, [illegible] man with the marking pot in [illegible] cast a radiant smile as his brush [illegible] a customer's name on each package, and dozens of boxes were being trucked [illegible] railway lorries, and thence to the [illegible] sheds. Yes: the hardware trade is good in London, Ont. Travellers are [illegible] in good orders, and a few merchants are visiting the city to make their own selections. Prices of almost every article are exactly as at last reports, and no changes are looked for, as prices are usually a settled quantity at this season of the year.

* * *

The London Board of Education will ask for $4,000 or $5,000 more this year in their annual estimates than they did in 1902. The total sum necessary to run the schools for the year has crept up to better than $115,000. The natural increase in teachers' salaries, on the graded plan, is $1,800, and $1,500 falls due for fire insurance this year. London schools are all well equipped.

* * *

The Hospital Trust of this city will ask the city council for $23,500 this year, the amount to be used for repairs, expenditure, and extraordinary expense. In Victoria Hospital there are 150 beds, all at present in use, and 18 nurses; with the new addition there are to be 21 more beds, making a total of 151. Some good reading is to be found in the principal estimates for the maintenance of the above. Among them are the following: Butchers' meat, $3,600; butter, $1,550; milk, $1,550; flour, bread and meal, $870; tea and coffee, $600; general groceries, $3,300; potatoes and vegetables, $650; drugs and medicines, $3,000; beer, wine and spirits, $300. Additional insurance now runs the total risks to $7,300.

* * *

A radial trolley company, named The Southwestern Traction Company, but recently before the country, looks as if there was energy and money enough among the directors to make the scheme a success. The representatives of the company have just asked the town of Ingersoll for 50 years franchise, and exemption from taxation for 25 years. If this is granted the company will have cars running by the end of next summer.

* * *

Mayor Beck, of London, spent the best part of a day in Montreal with General Manager Hays, of the Grand Trunk, in discussing some of the matters that are at present the subjects of debate between the city and the railway company, notably, the water supply and level railway crossings. The mayor's time appears to have been well spent, and an early settlement of the differences is likely to be the result.

* * *

Business men with "horsey" proclivities would perhaps like to know that George McCormick of the "Forest City," offered $100,000 for the famous trotter "Cresceus," but his big money was not accepted. Mr. McCormick states that the offer was made by him on behalf of another party, whose name he would not divulge.

London old boys, who read "Hardware and Metal," are hereby informed that they are to be in readiness for a visit to their native city this summer, sure. Enthusiastic preparations are already on foot for a rousing reception to "the boys."

* * *

The city of London has been asked by the town of Goderich for some assistance. The Free Press says: "The town of Goderich is ambitious to become the Buffalo of Ontario, and with that end in view is moving heaven and earth to secure still better harbor accommodation. A letter received by the city clerk to-day, asks that the London city council take the matter into their consideration, and pass a resolution, urging upon the Government that the request of the county town of Huron be granted. Goderich also asks that the local members of Parliament be requested to take up the matter."

W. H. L.

RESPECTED HARDWAREMAN DEAD.

On Friday, Sebringville, Ont., lost one of its oldest and most respected business men in the person of E. Schmidt, stove, tinware and hardware dealer, of that place. Mr. Schmidt came to Canada from Vienna, Austria, in 1855, when 21 years old. He started business in Sebringville in 1860, opening up a tin and stove business. In 1881 he extended his premises and added hardware to his stock-in-trade. Four years later he handed over the business to his sons Alfred and John, who still continue it.

RETAIL HARDWAREMEN TO MEET.

Several weeks ago the announcement was made that a convention of the Hardware Section of the Retail Merchants' Association of Canada would be held in Hamilton, Ont., on Tuesday, February 24. This announcement was repeated in the Toronto dailies this week.

The Toronto officials of the Association, however, changed their plans, postponing the meeting to March 24. This change was not announced, with the result that several hardwaremen went to Hamilton to attend the meeting, and were annoyed as well as surprised to learn of the postponement of the meeting.

ST. THOMAS RETAILERS.

The regular monthly meeting of the Retail Merchants' Association of St. Thomas, was held on February 17, when the officers for the year were elected. They are as follows:

President—H. McPherson.
First Vice-President—E. Sutherland.
Second Vice-President—J. Stewart.
Secretary—E. Raven.
Treasurer—W. O. Forbes.
Inner Guard—J. H. Moody.
Directors—P. L. M. Egan, J. A. Forsyth, S. Dubber and J. G. Bennett.
Auditors—F. Sutherland and R. M. Anderson.

It was decided to hold a banquet on March 19, and Mr. Trowern, of Toronto, general secretary, be invited to attend. The following committee was appointed to make necessary arrangements, viz.: Messrs. Lewis Egan, J. A. Forsyth, S. Dubber, H. McPherson, R. M. Anderson and J. G. Bennett.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word each insertion; cash in advance. Letters, figures, and abbreviations each count as one word in estimating cost.

FOR SALE.

STOVE, TIN, AND HOUSEFURNISHING business for sale, plumbing in connection. Long established; splendid trade. OTTON & Co., Barrie. (9)

C.P.R. IMPROVEMENTS IN WINNIPEG.

The C. P. R., upon being granted certain requests, have agreed to erect in Winnipeg suitable freight sheds, a modern station and a first-class hotel; also to build at its own expense and forever maintain free from any cost to the city the proposed Main street subway, 100 ft. wide. Also to keep the same free from excess of water and in good condition for sleighing during the winter. The company also agrees to construct a subway for Gladstone street, midway between Main street and the river, and to maintain the same for all time. In addition, the company agrees to maintain an emergency crossing on either King street or Princess street. The cost of the improvements proposed are not to be less than $1,500,000. Work on the station, offices, hotel and subway must be commenced within one month after the prorogation of the Local Legislature, and the subway must be completed before the end of the current year.

MEASURING TAPES.

Those who have had long experience in the hardware trade will remember the difficulty often experienced in securing a good measuring tape. In fact, the only ones that could be procured had to be imported from Great Britain. This difficulty was not only experienced in Canada, but in the United States as well, until the Lufkin Rule Co., situated at Saginaw, Mich., after a good deal of experimenting, succeeded in turning out the desired article.

This concern is now one of the largest of its kind in the world. This will be readily recognized from the tact that it has the reputation of furnishing seven-eights of the measuring tapes used on this continent.

A SCALE IN USE 25 YEARS.

The Fairbanks Co., Montreal, have received the following letter from Daniel Balfour:

GENTLEMEN.—I have been using Fairbanks hay scales for the last 25 years. I am thinking of having them repaired next summer. Would you kindly give me the size and dimensions of woodwork required? I think I will have to take them up next summer. I have another pair of scales from your company, the best in use.

A PRACTICAL FISHING FLOAT.

The J. M. Mast Manufacturing Co., of Lititz, Pa., who have been selling on the Canadian market for a number of years a line of mouse and rat traps, now offer the Canadian trade what is claimed to be the most practical fishing float ever put upon the market. This float is lighter and more buoyant than cork, it can be readily attached or detached to and from the line without removing the line from the rod or the hooks and sinker from the line, which has been necessary to do with all old-style, good floats. This patent tip is what the fishermen have long been looking for, and it adds immensely to the natty appearance of the sportsman's kit as well as saves time and temper when he gets down to business. The hardware trade should write for particulars.

PERSONAL MENTION.

Mr. M. Sessenwein, of Sessenwein Bros., Montreal, is on a business trip to Europe and will be away for about five weeks.

THE BENNETT MANUFACTURING COMPANY.

Readers of HARDWARE AND METAL will be glad to learn that the business of the late J. S. Bennett, manufacturer of shelf boxes, store cabinets, etc., Toronto, has been reorganized under the style of The Bennett Manufacturing Co., and will from this date be even better equipped than heretofore. Next month the firm take possession of much more commodious premises, a step necessitated by the branching out of the business. This company have long enjoyed a reputation for the excellence of their shelf box systems, which are now almost invaluable to well-conducted grocery or hardware stores. B. F. Bennett and son, the brother and nephew of the deceased proprietor, compose the new company.

PAINT, OIL AND BRUSH TRADES

MUD CHANGED TO GLASS.

A CURIOUS phenomenon of mud turned into glass by electricity through the breaking of an electric wire has been seen of late on the road between Tacoma and Snoqualmie Falls, Wash., says The Paint Oil and Drug Review. The power transmission wires which carry the enormous water power of the falls to Tacoma broke and fell into the mud. Instantly a ball of glass was formed from the mud around the wire. It was the result of the intense heat of the electric current on its way to the earth, combined with the glass-making properties of the soil.

"There are lots of these specimens of electrical glass made instantly from mud out there, and they have ceased to be a curiosity with us at all," said one observer. "Wherever the wire touched the wet puddles thereabouts there would be a fantastic ball of glass form there on the instant. The glass will never be mud again, for as you will see the glass is perfectly smooth, and will wear as everlastingly as any bottle glass of the same inferior quality. It must have been a fine exhibition of fireworks at that moment, if anyone had been present, though for their own sakes it is probably fortunate they were not within reach of the sparks, which must have been most terrific to have made such an instantaneous transformation of the ground into glass."

ADULTERATED PUTTY.

During the past few weeks putty prices have been cut materially in Toronto, despite the high price of linseed oil and whiting, the regular ingredients.

The cutting has been either caused by or has led to considerable adulteration, machine oil taking the place of linseed. In fact, a chemical examination of some of the putty on the market would show that machine oil of a poor grade forms quite a proportion of its make up.

This adulteration produces a decidedly inferior article. Linseed oil possesses a water-and-weather-resisting quality that no other oil approaches. Machine oil may make a putty of fairly good appearance, but will be found deficient in lasting qualities.

LINSEED OIL MAY ADVANCE

There is much talk of an advance in linseed oil. A meeting of the jobbers will be held on Saturday or Monday and some insist that an advance will be agreed upon. This is a question. In any case, the demand is exceedingly small at the moment.

FOLLOW UP THE TRADE.

Mr. Hardwareman—
In your town
A building is going up
This spring.
It will need paint,
Varnish, glass and putty
And other goods.
What are you going to do
About it?
Wait until the builder
Comes to you?
Or hustle for the trade?
Your nearby rival
Waits to sell these goods;
His stock is fresh
And clean;
His store attractive;
His prices are O.K.
Yet you want that trade.
Now suppose you find
That builder,
Then gently jolly him
Until his order
Safely lies
Within your pocket.
Is this not better
Than to wait
And have the builder
Pass you by
And give his order to
The other fellow?
Now, think it over
And
Act
Accordingly
Henceforth.

PAINT AND OIL NOTES.

Louis Roger has registered as a painter in Montreal.

G. F. Welsh, painter, New Westminster, B.C., has sold out to C. W. Cook.

The assets of the business of Wm. Bone, painter, Hintonburg, Ont., are to be sold.

The Gurd "gusher" is reported to have settled down to an output of 75 barrels per day.

Oil prospecting is being earnestly conducted in Alberta, N.W.T. Some oil of excellent quality has been discovered.

C. C. Ballantyne, Canadian manager for The Sherwin-Williams Company, returned to Montreal on Monday from New York. While away he visited their new factory at Newark, N.J., which was completed about a year ago, and is said to be the most modern paint factory in America, but the new factory to be erected in Montreal this coming summer, will be even more up-to-date. Mr. Ballantyne reports all lines of business very brisk in the United States.

CANADIAN AGENTS FOR "MURESCO."

The Francis-Frost Co., Limited, of Toronto, have been appointed Canadian agents for "Muresco" tints for wall and ceiling decoration, manufactured by Benjamin Moore & Co., New York and Chicago.

"Muresco" has been on the United States market for about ten years and has secured a remarkable grip on the trade there. It is good enough for the finest decorations, yet is cheap and can be applied to new or old plaster, brick, stone, wood or metal. It is artistic, yet of soft-wearing quality, being fireproof and sanitary, and will not crack, peel or rub off.

Handled by such an enterprising firm as The Francis-Frost Co., Limited, "Muresco" should soon have as big a sale in this country as it has throughout the United States.

PAINT AND OIL MARKETS.

MONTREAL.

THIS is the first time in several weeks that there is no advance to note in turpentine, the price remaining at last week's quotations. A matter of comment among the paint and oil trade is the steady call for dry colors. Manufacturers state that they have difficulty in keeping up the supply of crome yellow, permanent greens and golden ochres. The orders for March and April shipment for painters' materials of all description appear to be very heavy. It is felt among the manufacturers that there should be an advance in varnishes, as the present prices are below the real value of the materials used in the manufacture. However, in the absence of an association, it is difficult to get the manufacturers together, and makers of popular brands will probably take hold of the matter and agree on a certain advance in prices. Business generally, is reported to be good, and as the weather becomes milder an improvement is looked for. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25;

"It's worth the money"

Is a statement you can make about every can of "Ark Brand" Paint.

It's an honest paint, that is true to every statement made for it. It does not fade, peel or chalk, and gives perfect satisfaction.

Dealers who carry "Ark Brand" find it one of the most satisfactory and profitable features of their business.

"Ark Brand" is guaranteed to give perfect satisfaction if used according to directions, and if it proves otherwise, the dealer is authorized to refund the amount of purchase price.

Write us for prices and "Ark Brand" Literature.

—

TORONTO.

While some retailers are undoubtedly holding back their spring orders in anticipation of reduced prices and on account of heavy stocks carried over, jobbers generally, state that the volume of business of a sorting nature is very large. Prepared paints are particularly active. Shingle stains are also in especial demand. Staples, such as turpentine, linseed oil, white lead and paris green are slow. Prices are well maintained, but without change. We quote :

WHITE LEAD.—Ex-Toronto, pure white lead, $5 to $5.25 ; No. 1, $4.62½ to $4.87½ : No. 2, $4.25 to $4.50 ; No. 3, $3.87½ to $4.12½.; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards ; ½c. per lb. extra will be charged for 12½-lb. pkgs.; genuine dry white lead in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50 ; ditto, in kegs of 100 lb., $5 ; No. 1, in casks of 560 lb., $3.75 ; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb. ; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35 ; white, $2.35 to $2.45 per gal. ; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10 ; bladders, in 100-lb. kegs, $2.25 ; bulk in barrels, $1.80 ; bulk, less than barrels, and up to 100 lb., $2.05 ; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.: 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity ; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon ; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c. ; boiled, 63c.; 6 to 9 barrels, raw, 58c. ; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 95c.; 2 to 3 bbls., 94c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows : Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

—

WINDOW GLASS.

MONTREAL.

Dealers say that orders for March and April shipments are not up to a year ago, but expect it is on account of the severe weather, and as country dealers are holding off till the spring before ordering. Locally, a good demand is reported, and the prices are steady. We quote as follows : First break, 50 feet, $2; second, $2.10 for 50 ft. ; first break, 100 feet, $3.80 ; second break, $4 ; third break, $4.50 ; fourth break, $4.75.

—

TORONTO.

Owing to the steady advance in Great Britain jobbers express the feeling that prices should be advanced locally. A meeting will probably be held at the end of this week or the beginning of the next. The demand from stock is not usually heavy at this season, but is better than customary. Quotations are as follows : Star, Under 26 in., $3.80 ; 26 to 40 in., $4 ; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

CHAT

RITCHIE & KRAUTER have sold out in Atwood, Ont., and are starting a hardware store next to J. Macdonald's store at Ethel, Grey Co., Ont.

The building and stock of A. Child & Son, hardware dealers, Gravenhurst, Ont., was almost completely destroyed by fire on Tuesday morning.

D. W. McDonald, hardware dealer, of Wellington, Ont., has admitted into partnership, his brother, H. A. L. McDonald, under the style of McDonald Bros.

C. C. Speight, who recently purchased a stove and tinware business in Acton, Ont., has decided to put in a stock of shelf hardware, farm and garden tools, etc.

The business men of Wilmer, B.C., have decided to organize a board of trade, and R. R. Bruce has been elected president, and H. Macdonald, secretary-treasurer.

The hardware firm of Ivmg, Cunningham & Drew, who have been in business in Chatham, Ont., for a number of years, have now dissolved partnership. Peter Cunningham, of the firm, has bought the other two members out, and will run the business himself.

A. M. Dowsley, manager of The Dowsley Spring and Axle Works since its establishment here, has resigned his position. Mr. Dowsley will be succeeded by Mr. L. Kennedy, who has up to the present time represented Warnock & Co., of Galt. Mr. Dowsley continues his interest in the firm.

Fire started in the hardware store of Jackson, Brett & Co., Orangeville, Ont., on Tuesday morning, and before it was put out it had destroyed that firm's store and stock; also Mercer & Robinson's harness store and the Gordon House. The total damage was about $35,000, and is fairly well covered by insurance.

A. E. H. Braithwaite, hardware merchant, Gananoque, Ont., was married on Thursday last at St. George's Church, Ottawa, to Miss Maud M. McCormick, daughter of H. McCormick, late of Carleton Place, Ont., and sister of R. W. McCormick, chief train despatcher of the C. P. R. at Ottawa. The wedding was a very quiet one, only the immediate relatives and friends being present. After the ceremony supper was served at the residence of the bride's father, 404 Albert street, Ottawa. Mr. and Mrs. Braithwaite left on the 11 o'clock train for Toronto and the West.

M. Proulx, general merchant, of Ste. Anne de la Pocatiere, Que., is dead.

Horse Nail

ARITHMETIC.

EXAMPLE:

(a) 32 Nails are required for to put on a full set of Horse Shoes.

(b) The average weight of 32 Nails of No. 8, which is a fair average size of all nails sold in Canada, is approximately ⅓ of a lb.

(c) If, therefore, you use a cheaper Horse Nail than the "C" brand at, say, twenty-five cents per 25-lb. box less, it reduces the cost per pound one cent, and therefore on the 32 Nails used only ⅓ of one cent.

(d) If you use Nails at 50 cents a box less than the price of "C" brand, it reduces the price two cents per lb. or, and for the 32 Nails, ⅓ of two cents, or ⅔ of one cent.

(e) If you use Nails at 75 cents a box less than the "C" brand, it is three cents per lb. less, and for ⅓ of a lb. is, of course, ⅓ of 3 cents, or one cent.

The whole question of economy on Horse Nails resolves itself into a question of fractions of a cent to the man who is getting his horse shod. And to the Farrier who wants to do the best work, and give entire satisfaction to his customer, if these facts were made known to him, there would be no trouble on the part of the dealer in selling him the best, or "C" brand Horse Nails. You can do all your Horse Nail trade with the "C" brand Horse Nails. Don't be a "cats-paw" to market inferior goods. Good goods will ensure for you a good trade in any line; they make friends. We solicit your kind preference in ordering Horse Nails for our "C" brand which we have been manufacturing in Canada for 38 years. They are made from the best obtainable material known or used in the world for manufacturing Horse Nails. They cost a trifle more, but they are worth more.

HEATING AND PLUMBING

THE LIFE OF THE GAS MANTLE.

ALTHOUGH incandescent gas mantles have wonderfully increased in strength during recent years, they are still articles which have to be handled tenderly, or the result is disastrous, comments an exchange. It is the fragility of the mantle that is the subject of the greatest complaint in ordinary households. Some of the very cheap mantles on the market are undoubtedly rubbish, but the people who buy them are doubtless still under the impression that a gas mantle cannot be relied upon to last more than a couple of months. Many ironmongers could make an effective point by proving that idea to be erroneous. We ourselves have had Welsbach mantles in use which have been in fairly good condition at the end of 15 months. And we look upon that life as being a reasonably long one for a mantle. But it seems we have not been sanguine enough. Thomas Redman, of Bradford, tells us in The Gas World, however, that he has a mantle in use for over six years, which is still capable of giving a duty of 15 candles per cubic foot of gas. It is now, and has been for some time, living in the comparative seclusion of a bedroom, but in its younger days it was for 13 months attached to a pillar-light close by the foot of the stair-rail in Mr. Redman's house, and for close upon three years afterwards it was fixed on a water-slide chandelier in the kitchen. We should think Mr. Redman's mantle holds an easy record for long life, but it may be there are a few amongst our readers who can furnish us with further statistics upon the longivity of mantles from their own observations.

CHANGES IN PRICES.

Several changes are reported in our market reports this week. Range boilers are 50c. lower, the reduction being the result of United States competition. Many sizes of iron pipe are advanced, owing to scarcity of stock. Solder is stiffening, too, as a consequence of dear tin and lead.

JOBBERS FEEL THE ACTIVITY.

"This is, generally speaking, a dull season with the supply houses," said a jobber this week; "yet we are now as rushed with orders as we generally are at the busiest season. All lines are wanted. And every part of the Province is looking for supplies. The Georgian Bay and Soo territory is particularly active, our orders from that section being remarkably large. Trade may slacken off, but there is every indication at the moment of a record year."

PLUMBING AND HEATING NOTES.

The assets of Townsend & Walsh, plumbers and tinsmiths, Ottawa, are to be sold on March 3.

The annual meeting of The Dominion Radiator Co., Limited, Toronto, will be held on Monday, March 16.

S. T. Hadley, of The James Morrison Brass Manufacturing Co., Toronto, has returned to work after a stiff attack of "la grippe."

W. H. Parsons, of Parsons & Co., Edmonton, N.W.T., has returned home after a visit in Toronto. Like other business men in the Northwest he is enthusiastic over prospects in his district.

The Toronto Master Plumbers' Association hold their meetings fortnightly now. There were nearly 70 at the meeting held on Monday evening, when a conference regarding prices was held. A decision regarding prices will not likely be reached for some weeks yet.

BUILDING NOTES.

The C.P.R. will build a new depot and round-house at Medicine Hat, N.W.T., and Marshall & Hunter will build a new warehouse near by.

The C.P.R. have made application to the Montreal Harbor Commissioners for permission to build a grain conveyor to connect their two large elevators at Montreal.

The Elmira Real Estate Co. have applied for a charter in order to erect about 20 dwellings this summer. It is probable that the waterworks system will be installed in Elmira this year.

Scarcity of brick is curtailing building operations in Hamilton, and the local dailes claim that brickmakers have reduced the output to advance prices, which have risen 50 per cent., now being $9. per thousand.

Contractors and building laborers are preparing for trouble in May. The workmen talk of striking for more pay. The employers say they will meet these requests in some degree, but will oppose any demand beyond a certain limit.

St. George's Society, Ottawa, will erect a new hall on Bank street, that city, at an expense of about $20,000.

BUILDING PERMITS ISSUED.

TORONTO.

JESSMAN & SMYTH, pair semi-detached houses, to cost $14,000, at 175 and 177 Arthur street; L. Jessman, architect.

The T. Eaton Co., for $3,000 addition to their premises; Thomson Bros., builders.

C. A. Larkin, for $5,500 dwelling on Elm avenue; Chadwick & Beckett, architects.

M. H. Flint, for $2,000 house at 369 Markham street; M. Forsyth, architect.

A. E. Peglar, for two $1,200 dwellings on Pape avenue.

LONDON.

Robert Heard, 662 Princess avenue, for 1½-storey brick house.

Ernest Badle, for brick cottage at 665 York street.

OTTAWA.

Arnoldi & Ewart, for a solid brick warehouse for The F. J. Castle Co., on Queen street. Value $18,000.

J. R. Booth, a $9,000 building to be erected on water lot G at the Chaudiere.

James Walker, for a $2,000 dwelling on Strathcona avenue.

Mrs. L. M. Moxley, for a $3,000 dwelling on Frank street.

COLLINGWOOD.

H. Dixon, $2,500 foundry on Birch avenue.

E. Thomas, $1,200 brick residence on Robinson street.

A. Houghton, $800 dwelling on Patterson street.

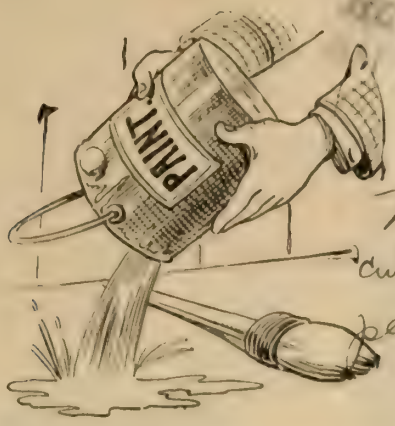
Mr. Bartlett, two $1,200 brick dwellings on Balsam street.

PLUMBING AND HEATING CONTRACTS.

Chadwick Bros., Hamilton, have the contract for electric wiring in 40 houses for the Barton Building Co., Hamilton.

The Bennett & Wright Co., Limited, Toronto, have contracts for plumbing, gasfitting and electric wiring two houses on Crescent Road, for the Macpherson Estate, and for electric wiring Trinity Methodist church, Toronto.

CHEAP, BUT GOOD.



It's a Barn Paint . .

and just the kind, too, a farmer or anybody else wants for his barns, bridges, fences, roofs, outhouses, and every place that wants a good, strong, heavy paint; where our finer grade house paints come too high. You should see our handsome counter card for these paints, and remember you can sell at $1.00 a gallon and make a nice profit.

The Manufacturers' Banquet at Brantford

THE manufacturers of Brantford, Ont., have long been noted as manufacturers. They now have the reputation for hospitality. This reputation was carried beyond all peradventure on February 19, when they tendered a banquet to the members of the Canadian Manufacturers' Association. In compliance to the invitation to partake of their hospitality, there were a number of manufacturers present from Montreal, Toronto, Hamilton, Guelph, Paris, Detroit, Mich., Peterboro', Port Hope, Goderich, Galt, Ingersoll, London, etc.

A special train left Toronto on Thursday evening at 5.20 o'clock and it had on board, besides a goodly representation of men from the "Queen City," Robt. Munroe and George E. Drummond, of Montreal, who, notwithstanding that they had been in the railway accident at Whitby, were determined to accompany their confreres to the "Hello City." C. A. Birge, the president of the Association, who had been in Toronto to attend a meeting of the executive committee, was also on hand.

At Hamilton a number of other manufacturers were picked up, and here a little incident accurred which nearly prevented President Birge from proceeding farther. His man was to have met him at the station with his valise and banquet garments; in other words, his dress suit, but he failed to materialize. Remembering the experience of the man who had been cast into utter darkness, because he had appeared at a feast without his wedding garments, it was some time before his fellow members of the Association persuaded him to proceed on his journey, in the hopes that at Brantford some good Samaritan might be discovered who would lend him a dress suit. The train was about three-quarters of an hour late before leaving Hamilton, but no one has yet charged that it was due to the absence of Mr. Birge's dress suit. Although a man above the average size, fortunately, Mr. Birge was able to procure in Brantford a dress suit that "fitted him like the paper on the wall."

The Brantford manufacturers had made preparations for the entertainment of their guests far in excess of anything the latter had dreamed of. The banquet was simply magnificent, besides which it was surrounded by many unique features,

Cover of Menu Card.—One-Fourth Original Size.

which will long impress it upon the memory of those who were fortunate enough to be the guests on the occasion.

The banquet was held in the Kirby House and along the northern wall of the dining-room were pictures of the men who had contributed much to the reputation of Brantford as a manufacturing centre. There were, for example, pictures of such men as: late John Harris, B. G. Tisdale, G. O. Wisner, C. H. Waterous, sr., Wm. Buck, W. A. Scarfe, L. T. Whirehead, J. G. Cockshutt, I. Cockshutt and John Elliott, and underneath these was a banner bearing this device: "The Fathers of Brantford's Industry."

One could almost imagine, as he gazed on the faces of these famous men, that he could discern a smile of approbation on their countenances. Of course, at a banquet, it is sometimes possible to imagine many things, but this was noted at an early hour in the evening.

Covers were laid for 200 guests, and every chair had an occupant. The decorations of the tables were unique. Each guest had in front of him several articles to remind him of the manufacturing industries of Brantford. Probably the most unique of these articles was an inkstand, representing the McCord oil box, which is extensively used by Canadian railroads, and is manufactured at the Brantford Malleable Iron Works. Another souvenir, which will be much remembered, was a lead pencil presented by The Brantford Screw Co., and was 3½ in. long and made in imitation of a wood screw, with a gold-plated head. Shuttleworth & Harris presented each guest with a small pot of Bow Park cream cheese and a neat little notebook. The Cockshutt Plow Company, Limited, had before each guest a neat little buttonhole badge in the shape of a plow-share made of aluminum and finished in gold bronze, with a neat safety pin and red, white and blue ribbon attached. From the factory of T. J. Fair & Co., were three "Bobs" cigars, neatly tied together with yellow ribbon.

Menu and Toast List.—One-Fourth Original Size.

On the centre table was a model of a windmill, manufactured by Gould, Shapley & Muir Co. It was silverplated, stood about 4 ft. high, and was driven by an electric fan. On this same table was a model in wood of the new Carnegie library, which is being built in Brantford by Schultz Bros. Co., Limited. The Brantford Starch Works, Limited, had boxes of starch located at the different tables, and The Farmers' Binder Twine Co., Limited, had tiers of twine scattered here and there. Scarfe &

Co. had neat, little varnish tins placed in front of each guest. Illustrations of some of these souvenirs, which were presented to the guests, are illustrated in this article.

C. H. Waterous, of The Waterous Engine Co., Limited, was chairman, and an excellent chairman he made. His remarks were not only to the point, but there was a spice of dry humor running through them which the audience seemed to fully appreciate.

On the right of the chairman were: C. A. Birge, president of the Manufacturers' Association; G. F. Ellis, president of

Souvenir of Brantford Banquet—Ink Stand presented by Malleable Iron Works.

the Toronto Board of Trade; Robert Munroe, past president of the Canadian Manufacturers' Association; P. W. Ellis, another past president; W. F. Cockshutt; J. B. Henderson, president of the Paris Board of Trade; and C. B. Heyd, M.P. On his left he had H. B. Timmerman, general superintendent of the Canadian Pacific Railway; O. P. Letchworth, Buffalo, president of The Pratt and Letchworth Co.; George E. Drummond, vice-president of the Canadian Manufacturers' Association; A. K. McNaught, president of the Toronto Industrial Exhibition; T. A. Russell, manager of The Canada Cycle and Motor Co.; R. Scarfe and T. H. Preston, M.P.P.

The menu card, which was printed by The Expositor job department, of Brantford, was in keeping with the excellence of the banquet. It was in three colors, and some idea of its appearance may be judged from the accompanying reproduction. This reproduction is about one-quarter of the size of the original.

Mr. Letchworth replied to the toast of the "President of the United States," and he, from the start, put himself quite in sympathy with the guests. He said that the sentiment of the President of the United States towards all foreign people, and especially toward those whom he considered were joined to the American people by kinship and blood, were of the warmest character. His greatest interests were towards his closest foreign friends, the Canadians. Of course, this remark brought forth loud applause. Mr. Letchworth confessed that he had undergone conversion in regard to the question of reciprocity between Canada and the United States, and expressed the opinion that he was in favor of a higher duty being put on pig iron and approval of the principal of protection in general.

First to respond to the toast of "Canada, Our Country," was C. A. Birge, of Hamilton, the president of the Canadian Manufacturers' Association. Like everyone else, it was natural that he should preface his remarks with words of appreciation of the hospitality of the manufacturers of Brantford, and hoped that he would see more of them affiliated with the Association. He said that the membership was now 1,213, with 29 more applications to hand that day. He hoped that the number would soon reach 1,500, which, he said, would be within 100 of the great and influential Manufacturers' Association of the United States. This announcement, which was a surprise to a great many, created quite a little applause. Referring to the tariff, he said that the Association took strong grounds in regard thereto, even in waging war on foreign competitors. It was desirable, he declared, to adopt a tariff that would be suitable to both political parties. Canada could now stand alone and a policy should be adopted in Canada in Canadian interests, regardless of Great Britain, United States or Germany. This remark, too, was evidently in sympathy with the views of the guests, for it received warm approval.

George E. Drummond, of Montreal, also spoke to the same toast, and although he had been badly shaken up in the railway accident in the morning, he made an extremely able speech. In fact, more than one gentleman present was heard

Souvenir of Brantford Banquet—Pencil presented by Brantford Screw Co.

to remark that he did much better than could possibly have been expected under the circumstances. He declared that if Canada was true to herself she would become a great country. In things material she had a good start and she should be careful to maintain and develop that prosperity so that by no means it could be cut out of its foreign or home markets. It was not a political question, but one in which all Canadians should be united. In proportion to population, Canadians were very wealthy. The country, however, while prosperous, needed further development in the interests of the farmers and the manufacturers.

One thing lacking, he declared, was population, and, unfortunately, Canada had not succeeded in holding its natural increase. In his opinion, the cause of this was that the whole burden of national life had been laid upon the farmer, and this should not have been. There was no quarrel between the manufacturers and the political parties, but to develop the manufacturers the first thing to do was to protect labor interests, by providing tariff adequate to secure home markets against foreign labor. The country absolutely demanded it and no one could afford to delay doing the right thing.

Souvenir of Brantford Banquet—Badge presented by Cockshutt Plough Co. Limited.

Technical education finds much favor with Mr. Drummond, and he took the opportunity of putting in a strong word in favor of it.

Another energetic speech on the toast "Canada, Our Country," came from Robt. Munroe, of Montreal, who delivered one of his characteristic, vigorous speeches, in spite of the fact that he was feeling very much the effects of the shaking up which he received in the railway accident at Whitby that morning. Mr. Munroe, it might be mentioned, was in the washroom when the accident took place, and in endeavoring to make his way through the narrow passage, between it and the main part of the car, was knocked about considerably, receiving some nasty blows on the head. He declared that the matter of the tariff was a plain business proposition, and the fact that there was a balance of $70,000,000 against Canada in her trade with the United States, was to him, a convincing argument in favor of a higher tariff. Technical education also came in for warm remarks of approval, and he deprecated the fact that in Canada too much time was given by boys to sports and not enough to study.

An original poem was [illegible] by W. F. Cockshutt, entitled "Man in Canada," and was composed by Miss Pauline Johnston, the well-known poetess. This

poem was at the end of every verse liberally applauded, and read as follows:

What is the creed and the calling that we of the North upho'd—
It is never the cry for power, it is never the greed of gold.
Let the east and south and west contend like wolves for a maverick's bone,
But Canada for the Canadians is the creed that we call our own.

Good times are at Kaiser Wilhelm's, good cakes are at Uncle Sam's
And in dear old Britain's larders are the best of plums and jams
But beef and bread and a blanket, a pipe, a mug and a tote
Are the things that we have in Canada—what more can a man desre?

We don't need the marts of Europe, nor the trade of the Eastern Isles.
We don't need the Yankee's corn and wine, nor the Asiatic's smiles.
For what so good as our home-made cloth, and under the wide blue dome.
Will you tell me where you have tasted bread, like the bread that is baked at home?

And we are the young and strong, and who so fit for the fight as we?
With our hands of steel and our iron heel and our hearts like the oaken tree,
For we are home-made, home-fed, the pride of a princely land,
And the things that are made in Canada, are the things that her sons demand.

So this is the creed and the calling, that we of the North uphold.
It is never the cry for power, it is never the greed of gold.
Let the east and south and west contend like wolves for a maverick's bone.
But Canada for Canadians is the creed that we call our own.

J. B. Henderson, of Paris, in a brief speech, declared that he was proud to be a member of the Association and felt that great good would result from its work. W. K. McNaught, president of the Toronto Industrial Exhibition, made a humorous and happy speech, particularly when he related some of his own experiences as a boy in Brantford. In fact, it was in Brantford that he first got his first business experience. He related, amid much laughter, his first business transaction. He had bought, at the suggestion of a relative, 100 lb. of butter in the fall, which he kept till the spring, and had made into 1 lb. rolls. He sold the butter on the Brantford market, but the next week his customers were looking for the boy from whom they had purchased the butter. Of course, he was not to be found, but Mr. McNaught declared that he owed his success to this first venture.

J. F. Ellis, president of the Toronto Board of Trade, in responding to the toast, declared that he was proud of Brantford. Brantford men, he said, had always occupied a high standard, and it was a matter for congratulation that she was the third city in the Dominion in importance in regard to exports of manufactured products.

J. P. Murray spoke in favor of revision of tariff and a higher tariff. He dwelt particularly on the necessity of a commercial agent in Great Britain and urged that the recently appointed agent, who was to be located in Birmingham, should first of all be brought in touch with the manufacturers of Canada, in order that he might be able to act in an intelligent manner when he began his duties. He referred to the direct steamship line to South Africa, and said that he had been under the impression until the other day that the Canadian Government had control of the rates by that line, but, unfortunately, it was not so. He thought that at least the rates should not be in excess of those from New York.

It now fell to the lot of Harry Cockshutt, the vice-president, to propose the balance of the toast, and in doing so he made one of the best speeches of the night and was liberally applauded. Referring to the tariff, he declared that it would be well to bear in mind the interests of all concerned.

The next toast on the list was that of "Agriculture," and was responded to by Thomas Brooks, a farmer, who lives near Brantford. The speech was an able one, and although the speaker took an opposite view in regard to the tariff, his remarks were couched in such humorous terms, that he was frequently applauded. In fact, if any of the speakers were more cordially received than any other it was Mr. Brooks. His remarks in regard to the proposal to increase the duty on agricultural implements were particularly vigorous and at the same time amusing. He said that he knew personally the manufacturers of agricultural implements in the vicinity of Brantford, and, said he: "I know they are working night and day to fill orders. Furthermore, I know that some of them are millionaires. Why in the world, therefore, do you want higher protection? I tell you if you seriously attempt to have the duty increased you will have a kick from the farmers. In fact, to use a barnyard phrase, they will kick like steers. Yes, and while not perhaps as often, will kick like mules, although they will kick lower." (Loud and prolonged applause.)

Mr. Stratford also spoke to this toast, and as he is a manufacturer of binder twine as well as a farmer, to the amusement of those present, spoke both from the point of a protectionist, manufacturer and a free-trade farmer.

The toast "Transportation," was responded to by H. R. Timmerman, Superintendent of the C.P.R., and Mr. Fisher, general manager of the T. H. and B. Railway.

"United States Manufacturers—Let us Annex Them," brought a brief speech from J. Inglis, of Detroit, Mich. He said he had heard some talk in the United States of annexing Canada, but he had never before heard of Canada annexationizing the American manufacturers. However, he wanted to see the two countries get along together, and to help this purpose he was willing that such annexation should take place. (Laughter.)

It was now nearing 2 o'clock, and after complimentary remarks had been exchanged between the manufacturers of Brantford and their guests, what was undoubtedly the best banquet in the history of the Manufacturers' Association of Canada, was brought to a close.

A special train was awaiting the Hamilton, Toronto and Montreal contingent that desired to return to their respective cities that morning, but quite a number remained over till the regular morning train, while others, again, remained over until the evening, in order to take advantage of the drive about Brantford and suburbs, which had been arranged for by the local committee, to take place at 10 o'clock. A half-dozen large sleighs were provided, and under the charge of a local committee, the visitors were driven around to the various factories, for which Brantford has become famous. Unfortunately, the time at the disposal of the party was too limited, to allow the visitors to stop off at more than one of these factories. The one selected was that of The Waterous Engine Works. Here they were most cordially received, and made a flying trip through the engine shop. What particularly interested the visitors were the sawmill plants, which were being got ready for shipment to Australia, Tasmania and New Zealand.

AMBITIOUS SYDNEY.

The A. C. Thompson Co., Limited, of North Sydney, C.B., metal and hardware merchants, in addition to their branches at Sydney Mines and Glace Bay, have now opened a store at Sydney, in the Forbes block, on Charlotte street.

The new store is bright and attractive, having a 35-foot plate glass front. Within is a well-selected stock of hardware, paints, oils, builders' and mining supplies. A well-lighted cellar, 35 x 80, contains a large stock of plumbers' and steamfitters' supplies.

The A. C. Thompson Co., Limited, are now erecting a foundry which they expect to occupy by May 1. They will manufacture soil pipe, soil-pipe fittings, and stoves, also a soft coal water-heater. The foundry and steamfitting departments are under the management of Thos. C. Mason, formerly with T. McAvity & Sons, of St. John, N.B.

A despatch from Windsor, Ont., says that Pittsburg, Pa., capitalists may erect a $1,000,000 plant for the manufacture of soda ash, caustic soda, soda crystals and bi carbonate of soda near Sandwich, Ont.

THE ART OF ADVERTISING

ART OF WRITING ADVERTISEMENTS.

By W. H. Seyler, Advertising Manager E. W. Gillett Co. Limited

THE art of writing advertisements (for it is an art if we take it in its entirety) has, owing to the developments of modern business methods, assumed a position that cannot be ignored by the community. The progressive merchant has found it as necessary to have his advertisements prepared in a proper manner as it is for an ailing person to have his physician's prescriptions compounded by a competent chemist. Advertising being admittedly a necessity in modern business affairs, it remains only for the merchant to decide upon the kind that will answer his individual purposes with best financial results. It is an incontrovertible fact that the daily press is for the average merchant the best medium for reaching the masses, providing he clothes, feeds and amuses them. In my mind it is money thrown away for the merchant to write his own ads. instead of calling in the services of an experienced ad. writer. As well might he mix nux vomica, rhubarb and soda to relieve his stomachic ailments without knowing the proper proportions of each.

A professional ad. writer knows just what to say and how to say it to arrest the attention of the reader and induce him to buy. An experience of over 12 years in ad. writing and a close student of the different styles as applied to daily, weekly and monthly publications, has convinced me that of all forms of ad. writing the daily press is the easiest, while at the same time the most abused, and some of the attempts, as evidenced in our dailies, are painfully crude. I have always entertained the opinion that every first-class newspaper should have on its staff a competent ad. writer, who should have full knowledge of typography, and power and authority to arrange the advertisers ads. to best advantage. Too much seems to be left to the typesetter. In my opinion the proper arrangement and style of an ad. has as much to do towards the ultimate success of its insertion as the mere wording. It is all right enough to talk to the public in an off-hand, colloquial sort of way, but unless you arrest the reader's attention in the first place by some striking characteristic, the chances are your ad. will fail in its purpose. The exceptions to this argument are, of course, the ads. of the large departmental stores; these are in a class by themselves, and they have taken the place, one might say, of the auctioneer.

There is a form of advertising requiring much more careful preparation than the daily press ads., and that is trades newspaper advertising. In these, read by hard-headed, wide-awake business men, it is necessary to employ the highest and most convincing form of ad. writing. Here you have to talk straight and show the dollars glittering through every line of your ad. There is nothing that can be left to "bargain-counter" chances. A look through the average trade journal shows, to my mind, that many manufacturers and jobbers have either a lot of money to throw away, or too little time to give to this important branch of their business, or they are moved by a philanthropic spirit to help the publisher along. It is just as necessary to change the trade journal ad. every issue, be it weekly or monthly, as it is for the large departmental store to change its tempting offers daily. You must have something new to say about your goods every week, be it about style, profit, or other quality, and the manufacturer or merchant who does not change his ads. regularly stands still, and standing still in business is going backward.

THE SMALL ADVERTISER.

By J. Troy.

THERE seems to be an idea prevalent that advertising is for large dealers only. This belief has kept many a small merchant from improving his opportunities in this direction.

Nearly, if not all, the large retail merchants of the present day have became so by extensive advertising.

The advertising which they have done may not be the sole cause of their success, but it has been the greatest contributing cause. Nearly all large enterprises, which are now meeting with well-deserved success, have begun on a small scale. Their advertising was done in a small way, but it has been kept up day after day and year after year.

Good business methods, untiring industry and good advertising are the factors which bring success in business.

Do not be afraid of being overshadowed by the big advertiser. The big advertiser of the present perhaps may have been a small advertiser only a few years ago. Many times the well-worded reader of only a few lines, or the small display advertisement will reach the eyes of more readers than the pretentious display of the larger store. It tells the people you have goods to sell and what you will sell them for. That is all the big store can say.

Nine times out of ten it is the price that sells the goods, so don't be afraid to tell your story to the public. If you tell it in the right way and practice no deception it will be only a question of a very little time until you will begin to receive adequate returns on your investment in advertising space. The dealer, be he the corner grocer or the largest dealer in general merchandise in the city, who will sell staple or special articles, quality considered, for the least money, and lets the people know it, will receive the patronage.

If the small dealer buys his goods right he can sell them at right prices. Subscribe for a reliable trade paper, scrutenize the market reports carefully, therein you will find all the necessary information to enable you to buy your goods right.

Every city has plenty of examples showing how small dealers in all kinds of merchandise have made their business a success by wise and judicious advertisidg. Take what space you can afford, contract by the year, watch it, change the matter very frequently, and you will soon need more room for your store and more space in the papers. This advice is tendered the wholesaler, manufacturer and jobber as well as the small retailer. They can attract attention by a liberal use of advertising space in an honest trade newspaper, just the same as the small retailer can by taking space in the daily or weekly newspaper.

Judicious advertising will develop any mercantile business that has a right to exist.

KAMLOOPS BOARD OF TRADE.

OFFICE REMOVED.

William Abbott, sole agent in Canada for Jonas & Colver's "Nova" steel, has moved from 13 John street to the premises lately occupied by the Carpenter Steel Co., at 334 St. James street, Montreal, where he carries a complete stock of all sizes of steel.

Thos. G. Harlton, general merchant, of Exeter, Ont., has removed to Clandeboye.

Don't waste good work on poor galvanized iron —unless you want to be taught by experience.

Apollo is good.

H. Boker & Co.'s Scissors and Shears

Well known for their reliable quality.
The most satisfactory line for retailers,
to sell at a good profit.

ALSO

H. BOKER & CO.'S
"Tree" Brand Razors and Pocket Cutlery.

For sale by all leading Wholesale Hardware Houses.

CURRENT MARKET QUOTATIONS.

February 27, 1903.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information, no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

MONTREAL, QUE.

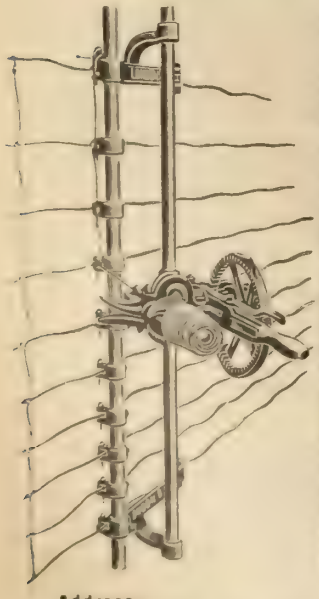
A FACT SAYS WEBSTER, "IS THAT WHICH IS REALITY,"



It is a fact that it costs more for labor to weave wire fences in the factory and stretch it afterwards than to do it in the field with a LONDON.

It is a fact that heavier, stronger and better built fences are being built all over this country with LONDON FENCE MACHINES.

It is a fact that there is as much profit to the dealer in selling LONDON MACHINES and COILED WIRE as in roll fencing.

The extra cost of roll fence is in the factory; the trouble with it is in erecting. It can't be done perfectly.

Sell your farmer friends a LONDON. It will build a perfect fence and win their approval every time.

Write for prices.

MISTRESSES AND MAIDS

DON'T OFTEN AGREE, BUT IN THOUSANDS OF HOMES WHERE

The World's Knife Cleaning Machine

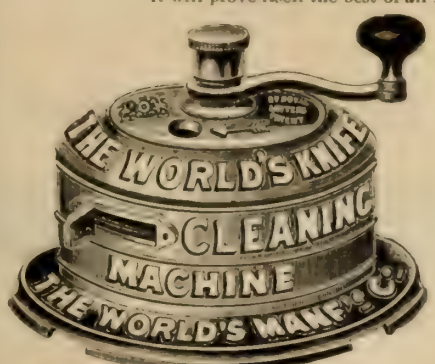
IS USED, THEY ARE OF ONE MIND AS TO ITS EXTRAORDINARY MERITS. By Royal Letters Patent

WHAT IT WILL DO

It will clean any sort, shape, or size of knife.
It will clean, easily, at the rate of 500 knives per hour.
It will make knife-cleaning a pleasure.
It will easily command large sale.
It will do away with all excuses for dirty knives.
It will feed itself with powder.
It will prove itself the best of all knife-cleaners.

WHAT IT WILL NOT DO

It will not damage the blades or handles.
It will not make any dust or dirt
It will not cause any worry or trouble.
It will not want constant reading.
It will not soil the hands of the user



Size—11 inches x 11 inches x 7½ inches high.
Weight about 12 lbs.
Over 25,000 sold in England last year.

WHAT IT COSTS IN COMPARISON WITH OTHERS.

Possessing all the merits and none of the faults of high-class, expensive machines, it yet compares favorably with all these in price, and the cost is not $25 or $30, but simply - - - - £1

British-made throughout. Handsome Electro Coppered. Complete in wood box, with tin of Knife Polish. It has only to be seen to be at once appreciated and to command a ready sale.

Retail Price,

$4.50

Only.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, MAROH 7, 1903. NO. 10.

COMMENT ON CURRENT TOPICS.

JUDGING from the results in North Grey the biting north wind which recently struck the Conservative camp in Ontario has veered around to the camp of the Liberal party. The question now is: How is the political wind blowing in North Ontario?

* * *

It was a case of "Heads I win, tails you lose" to the iron and hardware trade, as far as the election in North Grey was concerned. The candidates of both parties were in the iron trade.

* * *

The Manitoba Legislature, like that of Ontario, promises to become famous for its annual amendments to the Municipal Act.

* * *

Manitoba's Government claims a surplus of nearly $300,000 for 1902. Its friends may now be expected to stick to it. Prosperous Governments, like prosperous individuals, are usually able to retain their friends.

* * *

It is declared the Ottawa Government bought Two Mountains the other day. If it did, it evidently did not put the money in a hole.

* * *

Mr. Cortelyou, the secretary of the new Department of Commerce established a few weeks ago by the United States Congress, is a self made man. He has evidently done his work well.

* * *

The Canadian Pacific Railway proposes to spend $7,000,000 on improving its system in the West. Large as this sum is, it is relatively small, when one considers how great the railway development in the West must be before it is all commensurate with the industrial requirements of that part of the Dominion.

* * *

Germany aspires to the over-lordship of the Latin-American States. German citizens have for a long time been gradually working their way into the commercial life of those States, and particularly in Brazil. As the Monroe Doctrine has had some 80 years start in the role of national godfather to the Latin-American countries, Germany is treading on dangerous ground when it attempts to assume the role now filled by Uncle Sam.

* * *

A deputation of ladies waited upon Sir Wilfrid Laurier a few days ago and asked for a Bill for the prohibition of the sale and manufacture and importation of cigarettes. If those in Canada who believe that tea is injurious to the human system would now memorialize the Government to prohibit the importation and use of tea, these ladies who have just waited upon the Government in regard to cigarettes would no doubt be up in arms at once.

* * *

An attempt to carry on the election in New Brunswick on party lines cannot be said to have strengthened either of the parties, for their relative strength has been very little changed as a result. The Opposition has two more members than it formerly had, but, as the party cry was more loudly proclaimed by the supporters of the Government, it can scarcely be said that this increase of two is the result of party efforts.

* * *

Real estate speculators in certain parts of the United States who are alarmed at the emigration to the Canadian North west, are issuing pamphlets with a view to stopping the trek Northwards. The inducements offered by the Canadian Great West is too great to be appreciably influenced by the pamphlets of disappointed speculators.

* * *

Last week the Republicans in the House of Representatives, at Washington, unseated the Democratic representative from St. Louis, and gave it to a member of their own party, notwithstanding that the former was elected by a majority of about 300. Canada long ago relegated to the courts the duty of determining whether a member of Parliament was properly elected or not. There is no desire, whatever, in this country to revert to the older order of things, and the action of the House of Representatives with its attendant disorder and recrimination is not likely to develop a desire in Canada for a change.

* * *

When President Roosevelt visited New York on February 26, he was attended by many detectives and uniformed police men. It is evidently becoming more dangerous to be President of the United States, judging from the care which is taken to guard the life of Mr. Roosevelt than to be monarch in a European country. It will evidently soon be necessary to amend the line "Uneasy lies the head that wears the crown," in order that it may enbrace the Presidential office of the United States.

* * *

The United States authorities are taking active measures to prevent anarchists sailing for Europe. When the French liner La Champagne sailed on February 26, every passenger was closely scrutinized before going on board, and, if not known, was not allowed to pass until identified. This is a course which, while rather unexpected for the United States, is none the less commendable. If half this care had been exercised some 36 years ago, when hordes of Fenian agitators were arming at Buffalo to invade this country, Canada would have been saved a great deal of trouble and the United States would have possessed a better reputation for its observance of international law than it now does. They, however, evidently are growing wiser as well as bigger, and we, in Canada, are gratified even when they exhibit, in the slightest degree, respect for the rights of other nations. Now they are stopping anarchists, it is possible they may stop dynamiters should they ever again sail for Great Britain bent on their devilish designs.

WOMAN---THE AD. READER.

Nora Laugher, in Toronto Star.

As unto the bow the cord is,
So unto the man is woman;
Though she bends him, she obeys him;
Though she draws him, yet she follows;
Useless each without the other.

IN writing advertisements it is well to remember that the hand that rocks the cradle rules the (purchasing) world. A man reads his morning paper under pressure of time. He skims down the columns at breakfast or upon the street car. Even if he had the inclination he has not the time to devote to reading advertisements. After supper, he probably reads more, but it is the leading articles, money markets, stocks, general news, foreign items. As a rule, ads. are ignored by him; he is too weary after a hard day's work to be bothered with the news that on the morrow he will be able to purchase three neckties for 50c. or a $5 pair of shoes for $3.50, or a $3.50 derby for $1. If he did read the announcements in all probability he would forget all about them the next day. Man is a busy animal and if he is to be caught by an ad. he must be corraled by a strong fence of advertising. This corral may be constructed in two ways. First, by bringing very prominently before his notice some absolute personal need. His memory is usually equal to such an occasion. Second, by making his wife, mother, or sister the medium through which you reach his sense of need on his own behalf or that of his family. This is the most effective method. The query, "How to Catch a Man?" is thus answered "Through a Woman." The woman of the period purchasing her husband's neckwear is not a creature of the humorist's imagination—she is a reality. The hand that rocks the cradle rules the world and does the buying. Men may laugh, but women will shop, and quite right they are. Shopping is part of a woman's work. It is generally compulsory upon her, for Adolphus George scorns the idea of entering the store to ask for canned peas at three for 25c. or socks for little Joey at six pairs for 50c. No, Adolphus George would much prefer lording it around and paying 17c. per can for peas, and 25c. per pair for his son and heir's hose upon any ordinary occasion than pushing and jostling in a most undignified manner through a crowded store in search of bargains. Indeed he has a soul above bargains. Man necessarily gets measured for a suit or overcoat, therefore a good tailoring ad. is pretty sure to secure his attention. Then, he purchases his paper, pens and ink—the implements he uses in his office—and he cigars and tobacco, but the purchasing proper is effected by his mother or wife. Jim's better-half usually makes the first discovery that his shoes are giving out, and when Jim decides to purchase others he generally goes direct to the establishment whose ads. have been noticed, and, being noticed, have been talked of at the supper table or elsewhere by his worthy spouse. If Jim is so unfortunate as not to possess a wife, mother or sister to shop for him, he usually buys from the first store he sees. Woman does, in fact, 90 per cent. of the buying. Go any day, or any hour of the day, into Eaton's, Simpson's, Murray's, or any other store in Toronto (or elsewhere) and see for yourself.

Although metaphysics and philosophy may have proved that woman is intellectually a secondary factor in the affairs of humanity, yet, commonsense facts of everyday life have proved that she occupies a most important relationship to the family and race in being the determining factor—the actual homemaker and provider for personal, family and household requirements. While possibly not possessing such a versatile and highly developed brain as man, yet she rules him. "she bends him, although she obeys him." On the average she may not be possessed of quite as high a degree of the power of reasoning as her lord and liege, yet she is vastly more capable than he of taking charge of his house and household, his children, and (frequently) the family purse. The "eternal feminine," though not generally credited with a genius for thrift, is yet gifted with an admirable sense of intution, foresight, and (don't scold me, oh, my sisters, if I add) feline subtlety to such an extent that she has proven the doctrine of "the survival of the fittest" to personally superintend the buying for her master, man. Woman undoubtedly has less genius for mathematics. She may not, in many cases, be capable of working out a simple problem; she may feel almost tearful at the sight of a long column of figures that she is incapable of adding up correctly, but her capability for striking bargains, her influence in the purchasing realm, are sufficient to move or to stop the wheels of industry throughout the civilized and commercial world. Newspapers and magazines cater to this fact; ad.-writers realize it to a very large degree. Take up almost any journal of to-day and you will find but few advertisements that appeal directly to men—only such ads. as tobacco, cigars, machinery, firearms, etc. The vast majority appeal directly to women. In the whole category of merchandise for "the seven ages of man"—from infant's food for the new-born babe to hairgrower for the baldness of age—from the cradle to the alter, from the altar to the tomb, advertisements are addressed to women.

Nora Laugher.

Thus, it is well to bait your advertising hook or load your fowlingpiece according to the fish or game you seek. As 90 per cent. of the advertising has to interest women in order to be successful, it must be written to attract their attention and convince their judgment, and be placed where they are sure to see it. The 20th-century woman delights in knowledge—she is a human interrogation mark. What she does not know she is willing to learn. As she is constantly in search of information, the most natural source is through the columns of the daily press and the magazines. I believe, therefore, there are no better mediums than these to reach women.

SHEFFIELD CUTLERY MARKET.

In a report on the Sheffield market, The Ironmonger, London, Eng., says:

"Table cutlery has been in poor demand throughout the year both at home and abroad, with the sole exception of Canada, many makers having experienced a serious shrinkage of business. The year has seen another great advance in the use of celluloid for hafting, and a corresponding neglect of bone. The scarcity and dearness of large pieces of stag-horn suitable for carver-handles, has led to the wholesale adoption of imitations made of celluloid, some of which are excellent in appearance, and durable."

BUSNESS CHANGES.

DIFFICULTIES, ASSIGNMENTS AND COMPROMISES.

J. J. LAWSON, builder, of Acton, Ont., has assigned to John Stalker.

J. A. C. Blackwood, general merchant, Edrans, has assigned to C. H. Newton.

Gonzaque & Gagnon, general merchants, Thurso, Que., are offering 30c. on the dollar.

R. L. Scott, general merchant, Mather, has effected a compromise at 80c. on the dollar.

M. J. Wigle & Co., general merchants, Essex, Ont., have assigned to Chas. E. Naylor.

A. W. McCraney, general merchant, of Bronte, Ont., has assigned to Hugh Campbell.

F. W. Schaefer, general merchant, of Carthage, Ont., has compromised at 15c. on the dollar.

A meeting of the creditors of J. A. C. Blackwood, general merchant, of Edrans, Man., has been held.

A meeting of the creditors of G. Gagnon, general merchant, Thurso, Que., was held on February 26.

R. E. Claridge, general merchant, Hepworth, Ont., has assigned to S. A. Rifle, and a meeting of the creditors will be held on March 13.

INCORPORATIONS AND CHANGES.

The Standard Cement Co., Limited, Toronto, have obtained a charter.

Versailles Bros., hardware merchants, of Montreal, have been registered.

H. M. Welch & Co., carriagemakers, of Montreal, have been registered.

Joseph Lawrence & Sons, agricultural implement agents, Clearwater, Ont., are opening a branch business at Mather.

Code & Hayes, hardwaremen, Olds, have dissolved and H. M. Code continues.

Edmond McKenty, general merchant, of Bath, Ont., is offering his business for sale.

C. Kirouac, tins and cigars, L'Original, Ont., is adding hardware to his stock.

William Bishop, general merchant, of Kornoka, Ont., has sold out to D. Mathewson.

Wesley Conn, hardware dealer, Aylmer, Ont., has admitted James C. Taylor in to partnership.

The R. Pickard & Co., general merchants, Exeter, Ont., have sold out to Bennett & Snell.

The stock of the estate of H. W. Mockler, general merchant, Durham, Ont., is advertised for sale.

Skinner & Ryan, hardware dealers, of Pembroke, Ont., have dissolved: T. H. Skinner has retired.

The assets of the general business of Thomas Dulac, St. Victor de Tring, Que., were sold on February 27.

Excello is an honest varnish made to give satisfaction both to the man who sells it and to the man who uses it.

It is something you can push with confidence, and that no one else in your town can sell, if you get the agency for it.

You can afford to put extra thought and effort into the sale of as good a varnish specialty as Excello, because it will pay you in money and in reputation.

The Quality and Push that go with Excello cannot fail to win trade for you.

Excello is particularly adapted for use in the house. It is a rubbing and polishing varnish of exceptional value. It is pale in color and suitable for the most delicate work. It is an easy working varnish and dries dust free in 6 hours, and hard in 18.

Prices and advertising methods sent if you write for them.

WINNIPEG DEPOT, 147 Bannatyne St., East.

Beaudoin & Croteau, general merchants, Black Lake, Que., have sold their stock at 67½c. on the dollar to G. Rochette.

The sheriff is advertising the sale of the general merchandise of the estate of T. H. Logan, Carberry, Man., for March 6.

SALES MADE AND PENDING.

Bella Crysdale, general merchant, of North Port, Ont., is selling out.

Alex. A. Campbell, Apple Hill, Ont., has sold his stock of general merchandise.

The hardware stock of Butchard & Co., Carman, Man., is offered for sale by tender.

John A. Morton, hardwareman, Chatham, Ont., has sold out to James A. King.

Otton & Co., stoves and tinware, Barrie, Ont., are advertising their business for sale.

PARTNERSHIPS FORMED AND DISSOLVED.

Isaac Greenblat, general merchant, of Winkler, has been succeeded by Greenblat & Nitzkman.

Wm. Hopkins, general merchant, of Lauder, Man., has been succeeded by Hamelin Bros.

Joseph Philibert, general merchant, of Duck Lake, has been succeeded by Philibert & Houle.

Ingalls Bros., general merchants, of Grand Manan, N.B., have dissolved, and Roy Ingalls continues.

McGougan & Wright, general merchants, Summerside, P.E.I., have dissolved, and I. A. Wright has retired.

FIRES.

George Salvas, general merchant, St. Francois du Lac, Que., has been burned out; partially insured.

DEATHS.

J. D. Ryan, general merchant, Eastland, N.B., is dead.

The construction of the large dry-docks at Collingwood, Ont., is being rapidly proceeded with.

CHAT

ONTARIO.

LAST week a stranger called on a Guelph business man, represented himself as a typewriter expert, took away a good machine to repair, then traded it off for an inferior one, getting $15 to boot. The owner of the first machine discovered it and claimed it, so now the other merchant is out his machine, and would have lost the cash had he not paid the stranger by cheque, and stopped payment of it in time.

The Stacy Hardware Company, St. Thomas, Ont., have been appointed general agents for Elgin and St. Thomas for The Plymouth Binder Twine Company.

A. W. Humphries, Parkhill, Ont., admitted his son to partnership, the firm name now being A. W. Humphries & Son. The business was established in 1884, and Mr. Humphries, sr., is one of the best known hardwaremen in Ontario.

A. A. Osborne & Co., general merchants, Midland, were recently installed in their new and up-to-date store. The new premises present a very attractive appearance, great ingenuity having been displayed in the different arrangements.

C. Kerouack has had his shop in L'Original, Ont., fitted up for a general hardware store, where, in addition to his stove and tinware department, he will keep on hand a choice and general variety of hardware suitable for carpenters, builders and contractors.

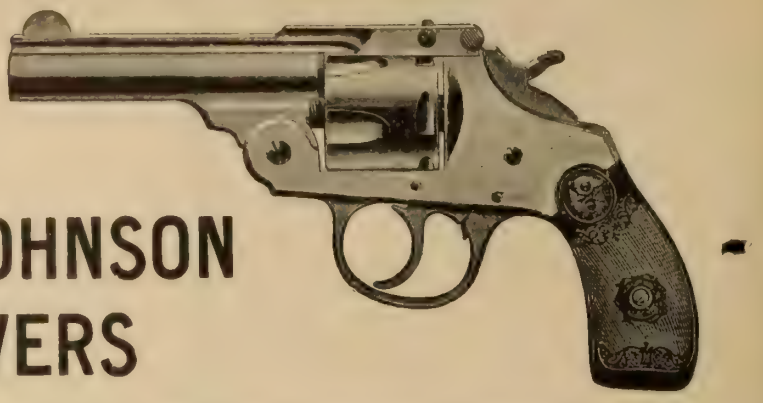
QUEBEC.

At a meeting held last week at St. Lambert, Que., the various municipalities south of the St. Lawrence, from St. Lambert to Levis, united in a vigorous request that the Government build or aid in building better railway facilities in that district. The meeting, by resolution, asked the Government to acquire the South Shore Railway, which now extends from St. Lambert to Levis, and obtain an entrance for it into Montreal.

MANITOBA.

A correspondent of a Winnipeg paper writes: "Mr. Croy, traveller for Balfour & Co., wholesale grocers, Hamilton, is looking for the most desirable point in the Territories at which to open a branch house for his firm. He was quite satisfied that Regina is the coming distributing point of the Territories, and will recommend it to his firm.

AN UNDISPUTED FACT.



IVER JOHNSON REVOLVERS

are absolutely safe; accidental discharge impossible. Millions are in use, all giving perfect satisfaction. The trade prefer them and the public demand them because they are "Honest goods at honest prices."

IVER JOHNSON'S ARMS & CYCLE WORKS,

New York Office: 99 Chambers St. FITCHBURG, MASS.

BRITISH COLUMBIA.

Business men throughout British Columbia are pleased by the conclusion of the Nanaimo coal miners' strike.

On February 14, the new Dominion fisheries protection cruiser, Kestrel, was launched at Vancouver. It is the first Government boat built on the Pacific Coast, which made the launching an especially interesting event. The new vessel has been constructed in the most up-to-date fashion, and is well adapted for her duties.

NORTHWEST TERRITORIES.

A despatch from Regina, N.W.T., says that every house, store and even room in that place is occupied.

J. M. Young, of the Regina Trading Co. and ex-president of the board of trade of that city, has disposed of his interest in the business, and will open up a real estate office.

Regina is to have an agricultural college and experimental station. The necessary funds for its maintenance during a couple of years have been raised, and the college will be established very shortly. The seven main branches of practical agriculture will be taught by an efficient staff under the directorship of W. H. Courd, LL.D., of the Dominion Department of Agriculture. The fee for a term will be $10.

S. Sargent, one of the principal merchants in Dawson, says that there is a marked development of trade in the Yukon during the last 12 months, although the output of gold was disappointing to most of the miners. Abnormal prices are, he says, a thing of the past; labor which used to be worth $12 per day is now to be had for from $3 to $4, and, of course, there is a corresponding decrease in the price of provisions and board.

NEW HARDWARE WAREHOUSE.

An important real estate deal was concluded yesterday, whereby one of the choicest and most centrally located business properties on Hastings street changed hands, and will be used as a wholesale branch of a large local hardware firm. The property consists of the three lots and block at present accupied by E. G. Prior & Company, as an agricultural implement depot. The purchaser is Matthew Leggatt, father of Henry Leggat, of the firm of Wood, Vallance & Leggat. The premises will be leased by the latter firm, who will use it as a wholesale department in their hardware business, retaining their present stores in the Dunn block on Cordova street, as retail premises.

The Prior block is one well suited for the purpose of a wholesale hardware business, being a two-storey block solidly built. The block is 80 ft. in depth with a frontage of 66 ft., and is most conveniently situated with regard to shipping facilities. —Province, Vancouver, January 25.

Sydney, N.S., has been incorporated as as a city. Its population is now about 15,000.

ELECTRICITY FOR MANY PURPOSES

It is a question whether any house in the United States has so many applications of electricity made within its walls as the residence of Charles R. Barnes, 69 Glasgow street, Rochester, N. Y., says an exchange. Mr. Barnes is the New York States electrician, which goes a great way in accounting for his many uses of electric current in the house he calls home. The question of economy has not been allowed to enter into the arrangement of the various apparatus, for the application of electricity is a science and fad with Mr. Barnes, and in the work he has found ample opportunity to display his inventive genius. Of course, it costs a great deal more to heat a house by electricity than it does by coal, even in this period of fuel scarcity.

The supply of current is taken from an electric-light circuit, and the switchboard is installed in the library. This switchboard is equipped with five double-throw switches, so arranged that it is possible to regulate the supply of current for each heater, and it is possible to give a minimum, medium or maximum amount of current to the heaters, or to turn all the energy into one room, which, of course, regulates the supply of heat given off. Electric heaters are placed in the front hall, the front and rear parlors, the library, the dining-room and in all af the sleeping-rooms. The heaters are about 2 ft. long, 12 in. high and 8 in. wide, very much resembling an oblong box painted black. Each heater has a fuse that will blow in case of a short circuit. In the sleeping-rooms, it is possible for the occupant to turn off the current by a switch at the head of the bed, and to throw it on in the morning, if the room be cold.

The kitchen is equipped with electrical-cooking devices that would make any woman happy. It has an electric stove with an electric oven. Coffee and tea may be made, meats cooked and pastry baked by electricity. In the dining-room an electric chafing dish is operated from one of the sockets of the chandelier. It is also possible to heat flat irons and curling irons by electricity in this up-to-date residence. Electric fans are numerous. Last Christmas Mr. Barnes had an electric Christmas tree decorated, it is said, with about 600 one-candle-power lamps, of three colors, red, white and blue, and this will again be a feature of the coming-holiday celebration. Still another electrical feature of the house is an electro-therm, a novelty on which Mr. Barnes is likely to seek a patent. It is a flexible electric-pad, 14 x 10 x ¼-in., made up of a number of flexible wires, carefully insulated from each other, covered with asbestos and wound with flannel. It is used for medicinal purposes, and takes the place of a hot-water bag or similar device.

A GROWING BUSINESS.

Not quite a year ago The Fairbanks Co. found that their rapidly-increasing trade in British Columbia required their being on the spot and a branch was opened in Vancouver.

Now their attention has been directed to Manitoba and the Northwest Territories, and a branch house is to be opened in Winnipeg. F. Ross-Newman, lately associated with The Laurentides Pulp Co., as general purchasing agent, has been put in charge, and left for Winnipeg last week.

MACHINERY AND ELECTRICAL NOTES.

THE Syrian Improvement Commission are ready to spend about $8,800 for a dredge, and United States Consul W. R. Davis, Alexandretta, Syria, writes for circulars and prices c.i.f. Alexandretta. Canadian dredges have won such an excellent reputation that if the makers here are able to take up such an order, their tender would receive every consideration.

A 6 x 4 x 7-pump was shipped to The Muskoka Wood Manufacturing Co., of Huntsville, Ont., by H. W. Petrie, of Toronto.

A 4 h.p. "Doty" engine has been installed in the plant of Marlatt & Armstrong, Oakville, Ont., by H. W. Petrie, Toronto.

A Clark and Demill wood-turning lathe was shipped to The Waterous Engine Works Co., Brantford, Ont., by H. W. Petrie, Toronto.

Mr. Burridge, of Burridge & Cooper, of Winnipeg, Man., paid Toronto a visit the other day and purchased a 6 h.p. vertical boiler from H. W. Petrie, Toronto.

A No. 2 "Cincinnatti" universal milling machine, with a range of 26 x 8 x 18 in. was purchased by The Henderson Roller Bearing Co., Toronto, from H. W. Petrie, Toronto.

United States Consul L. E. Dudley writes from Vancouver that unusually large purchases of mining machinery are being made for the Klondike mining regions, to be delivered next summer.

The South River Lumber Co., of South River, Ont., have added to their already immense plant a 12 h.p. horizontal steam engine for the filing room. The outfit was purchased from H. W. Petrie, of Toronto.

B. A. C. Craig, manager of The Canada Corundum Co. at Craigmount, Ont., has announced that the output of their plant will be increased from 800 tons to 6,000 tons per year. He has completed arrangements for the purchase of the necessary machinery.

The Vancouver Engineering Works have secured the contract for $20,000 worth of mining machinery for The Cariboo Goldfields Co. at Barkerville. The property is a gravel one and in developing it the company will expend over $80,000 during the coming season.

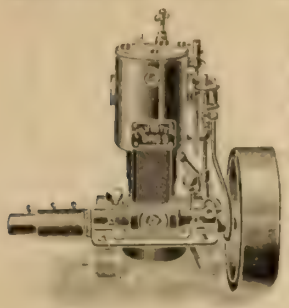
The potato crops about Warsaw, Russia, are unusually large, and a dozen or so potato-starch factories are being erected. Bronislaw Oderfeld, 17 Ujasdowska, Aleja, Warsaw, agent for machinery, desires to secure description and prices f.o.b. New York or Stettin, Germany, of machinery suitable for these factories.

The American-Abel Engine and Thresher Co. are making preparations for the completion of their new office and warehouse building in Winnipeg, work upon which was started last year just opposite the exhibition gate, corner of Dufferin and Sinclair streets. The American-Abel people have now an extensive warehouse on the east end of this property and are owners of the entire block. When completed their new quarters will be as elaborate as any in the West.

CANADIAN WINDMILLS IN FAVOR.

The Ontario Wind Engine and Pump Co. have recently supplied one of their 25-ft. diameter windmills to the Taltal Railway Co., Chili, who have previously purchased similar outfits from this company. Canada is being advertised extensively through the civilized world by this firm, as their foreign trade is considerably increasing. Fom The South-African Export Gazette we glean the fact that Canadian and American windmills are knocking out all other makes in South Africa. The reason is that the prices are much lower and the goods better adapted for the requitements of that country.

THE SYLVESTER GASOLINE ENGINES AND LAUNCHES.



Awarded the Bronze Medal (the highest prize) at the Toronto Industrial Exhibition 1902. The simplest, most reliable, economical and substantial Engine on the market. Can be used any place, by any one, for any purpose. Sizes 1½ to 16 horse-power. Stationary, portable, and marine. Also extra fine Gasoline Launches, best in the market. Write for Catalogue "H" and testimonials.

Heat: Its Properties and Part in Commercial Life.

By GEORGE F. BERNARD.

THE casual observer of the everyday business man, and in a great many instances the man in the engine room, pays but very little attention to the fundamental principle that makes our large manufacturing, railroad and navigation companies possible.

As to the exact nature of this principle, scientists differ, but all modern thinkers and investigators agree that this principle called heat is a form of energy and that it is a kind of motion. I do not propose here to enter into the many different theories regarding heat, but as much of the generally accepted theory will be given as will be necessary to make clear the principles which are to follow.

All bodies are composed of molecules. Notwithstanding the extreme minuteness of the molecules, they form a very important part in the modern theory of heat. Each molecule attracts the molecules surrounding it in a manner similar to the attraction between the earth and the bodies near its surface, only with an immensely greater force in proportion to their sizes. Without going into any theory regarding the precise nature of heat I will take it for granted that each and every molecule has a rapid vibratory motion to and fro, and that these molecules are kept from getting beyond a certain distance from one another by the attractive force called cohesion. Without this cohesion everything in the universe would crumble to dust.

When heat is applied to a body the number of vibrations is greatly increased, proportional to the amount of heat supplied. In consequence of this increase, the distance through which a molecule moves is increased, and the force of cohesion which binds them together is lessened. If a sufficient quantity of heat is added to a body, this cohesion force is overcome, the molecules separate and the body melts; if enough heat is added the melted body becomes a vapor. When it reaches this state the cohesion force has no effect, as in the case of steam, the number of vibrations being so far increased and the distance between any two molecules having become too great to allow the cohesive force to act.

In the above I have endeavored to set forth the generally accepted theory of heat. The next question is to generate it. This is commonly performed by the combustion of a form of carbon or coal. The chemical properties of coal are, free carbon, hydrocarbons, water or oxygen and hydrogen, with solid matter called ash. The proportions of these vary according to the quality of coal used.

In order to transform heat energy into the mechanical energy of motion mechanical motion on water must be employed, as in the case of the steam boiler from which this energy is transmitted to the steam engine in the form of a gaseous vapor. In the gas or gasoline engine it is air expansion which is made use of. Moreover, the heating of the air takes place in the cylinder of the gas or gasoline engine itself, thus taking the place of both engine and boiler.

In dealing with water we find that it is one of the most wonderful of the elements, as the following will illustrate: If cooled down from its boiling point it continually contracts until it reaches a temperature of 39.2 deg. F., when it begins to expand until at 32 deg. F., it freezes. On the other hand, if water at 32 deg. F. is heated, it contracts until it reaches 39.2 deg. F., when it commences to expand. Were this not a fact all the large bodies of water would freeze and the earth become uninhabitable.

The above being the case, the application of heat to water causes an expansion, an idea of the immense power of which, when it has become steam, can be gained when we consider that one cubic in. of water evaporated into steam expands itself 1,728 times, or one cubic ft. approximately.

It is this vast power that supplies the triple and quadruple expansion engines of the liners which make it possible to cross the vast expanse of the oceans in a few days. It is this wonderful energy that acts upon the pistons of the engines of the sawmills of the north country, and rushes into the compounded cylinders of the automatic cut-off engines in the plants of modern manufactures and electric companies. Like a million demons let loose it finds its way into the steam chest and cylinder of the locomotives of the railways, that most magnificent gift to civilization, contributed by the inventive genius of man. And the principle upon which all this rests is contained in a little word of four letters called "heat."

WHEN IGNORANCE IS BLISS.

While travelling through the south some years ago, I had occasion to visit a small out-of-the-way place in the State of Tennessee, and stumbled upon a small power plant consisting of a very old upright boiler of about 18 or 20 h.-p. The engine was leaking in every joint and pounded badly. But what struck me most was the entire absence of a steam gauge to register the pressure carried. The syphon to which one had been attached at one time, no doubt, was stopped up with a cap. I turned to the old fellow who was in charge of this outfit, and asked him what had become of his gauge, and what in the world he was doing without one anyway? He looked for a minute, and at last comprehending what I meant, said:

"Oh, you mean that clock that was up there; she got busted and I just threw her away."

I got out of that vicinity with all the speed the enervating climate of the south would allow.

G. F. B.

MACHINES FOR PURIFYING IRON.

The following extract, translated from a Russian paper, is supplied by S. Talpis, of The Montreal Smelting Works:

"In the iron refinery of M. Yon, in the city of Lodz, Russ-Poland, there was recently put to a practical test a machine invented by a local Hebrew, J. Frumkin, by which it is intended to separate the iron from phosphorus and all other foreign matter without the intermixing of lime. By means of this machine not only the quality of the iron will be considerably improved, but also the cost of refining and the use of other ingredients will be considerably lessened. The machine works entirely independent of heat or blast. The test was made in the presence of many prominent people of that commercial metropolis, the Manchester of Russia, and proved highly successful. It is expected to bring about great developments in the iron industry in the near future."

A TOOLSMITH'S EXPERIENCE.

"There is some steel spoiled by forging at too high a heat as was exemplified in my own case once," writes Thos. Beasley. "I had a punch die to make that was rather thin on the sides and did not take any particular pains to heat either and had the mortification to have them both break before they had done scarcely any work. I got quite a sharp talking to from the foreman, so I cut a piece of steel from the same bar previously used and was very careful in the heating and forging and had the satisfaction of seeing this one doing the work the other two should have done. It was always a great pleasure for me to know when I was at the tool fire that my work was giving entire satisfaction and always took the utmost pains to make all things work to that end if possible, and if they did not, I generally put on my thinking cap and investigated my failures and found where the fault was and corrected it."

EMPIRE MACHINE & METAL STAMPING CO., Limited

MANUFACTURERS OF ALL KINDS OF

MACHINERY

We make all kinds of Hardware and Wire Specialties. Wire straightened and cut to lengths.

Metal Stamping—We work all kinds of Sheet Steel, Brass, Aluminum, Copper and Silver to any shape.

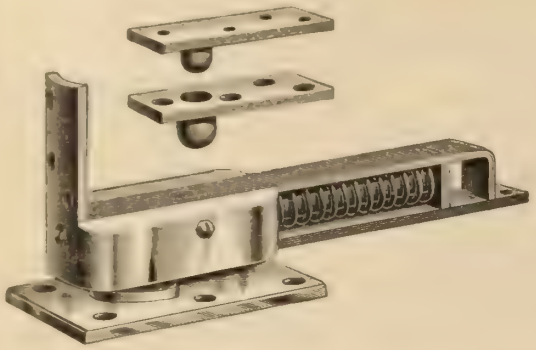
The Chief Floor Hinge

This has been brought out to overcome the objectionable features of the floor hinges at present on the market, which made it necessary to cut a large hole in the floor to receive the hinge, and as all the working parts were beneath the floor, it was impossible to prevent water and dampness from destroying the mechanism. ***Our Hinge*** is secured to the surface of the floor after it has been applied to the door, always bringing the door in perfect allignment before it is fastened to the floor. The tension of the Spring is regulated at any time after the door is hung, permitting the swing of the door to be adjusted as desired. Ask your jobber to show you a sample manufactured by



TAYLOR-FORBES COMPANY, Limited,
Guelph, Canada.

Fairbanks Valves

ONE of our friends said the other day: "Don't you get awfully tired of eternally talking about "Fairbanks Valves." Don't you find it hard to say something fresh."

Now, that man meant well, he really did, and he wanted to show how acute he was, and how much he knew about advertising.

But we don't get tired of advertising our valves. We give them a little start and they sell themselves. We have every confidence in them, they are the best made—we know it. We sold a great many in the season of 1901. In 1902 we doubled our sales, and this year, from present indications, will be better than ever. Are you handling Fairbanks Valves?

You will find it will pay you to keep a stock. We assist our customers with all the modern methods of advertising, and, by handling a Fairbanks' product you will find it an inducement to draw the class of trade that wants good goods.

IF YOU HAVE NOT SEEN OUR CATALOGUE SEND US YOUR NAME AND ADDRESS, AND WE WILL GLADLY MAIL YOU ONE

A CRYING EVIL OF THE WEST.

THERE is an evil that the retail trade of the Great West, particularly in the smaller towns, suffers from, and that is the continued and increasing practice of people sending to certain Toronto department stores for goods. This practice has become so common that it is very seriously menacing country retail trade. And what is there in it? It is a craze pure and simple. A very large proportion of the goods sent through by express and parcel post, if offered to the people in their home stores, even at the same price, they would not touch; in fact, no merchant would think of bringing such goods in, because he knows beforehand they are unsaleable here. And yet, simply because a certain house with the name for cheap goods, sends out catalogues and price lists, people are induced to neglect the home stores that in many instances have carried them as creditors for years.

When times were bad in the West, when there had been damaged crops for two seasons and everything was not on the high tide of prosperity that it is now, it was not the department stores who carried the farmers on their books for three years and let them have what they needed; it was the merchants in their own towns. These very farmers clamor from year's end to year's end for the highest price for their products.

It is not very long since a prominent farmer in the West declared he would not raise pigs because he only got $5 per cwt. at his own station. He admitted that this price paid him well, but he thought the packer was making ¼c. more rofit than he ought to do. And yet it is just such men who "round" on their country merchant and would, if possible, deprive him of business altogether. The department stores do not take any Western products, they do not buy our butter, cheese, bacon, beef or wheat. It must be all hard cash that goes to their net.

A hardware merchant who was in town during the Bonspiel, recited a rather good instance of this shortsighted policy. A man came to him and asked to buy a mop-handle. When told it was 25c., he said, "I can buy it for 15c. at Blank's," naming a certain department store in Toronto. "Perhaps you can," said the merchant, "but 25c. is the established retail price for Manitoba, and if I sold it for less I should absolutely have no profit."

The man went away and two weeks later the merchant saw him receive a mop-handle by express. On inquiry it was learned that it cost him 25c. for express. His bargain ran in this way: "15c. to Blank's for the handle, 2c. for letter ordering same, 25c. express; 42c. in all, and he had to wait two weeks for his goods. This is by no means a solitary instance.

There are not wanting signs that the country retailers are taking this matter up and are making a vigorous fight for their trade. One man who found the evil growing in his district sent out a card to all his various customers saying, "When you have your lists made out to send to Blank's give me a chance to tender on them first." One list was brought in to him amounting to $165. He filled the whole of it, with the exception of $5, and at the regular prices he was charging for the goods. The $5 represented leaders that he neither had nor wanted to have in his stock. He has filled a number of smaller orders and has had the satisfaction of being told that these customers will never send away again.

It is wise that the retail trade should take this matter seriously and make a united and determined effort to put a stop to this terrible leak in their business and profits. Manitoba farmers expect the merchants and jobbers to deal with them; they make a larger percentage of profit on their own produce, and for a smaller outlay than in any other business, and they should be willing to accord the merchant a living profit on their business. In doing this they would be serving themselves, for no one, no matter on what enormous lines he does business, can lay down the same quality of goods to be sold in Manitoba at the same price as they can be sold in Eastern Canada. What they gain as to price they, as a rule, lose as to quality.

Method is the mother of success in great undertakings.

LOWER FIRE RATES WANTED.

Insurance rates have reached such a height in Montreal that there have been some business buildings erected in neighboring municipalities which would otherwise have been located in the city. Some talk is heard of forming an insurance company among the business men of the city, which would be outside the combination of the other companies and would reduce rates.

If such a movement were to receive the backing of the business men, no doubt a powerful company would be the result, but they would first require the fire-fighting facilities of the city to be in somewhat better shape than at present. This applies not to the brigade itself, but to the lack of proper patrols about the down-town districts.

A fire may get well under way in many places before it is discovered, and serious conflagrations have before occurred mostly through not having earlier night watch service. It is a matter which is deserving of the greatest attention from the business men of the city.

AN IMPAIRED REPUTATION.

ON Tuesday next the Ontario Legislature reassembles for business. The Government while possessing a working majority will meet the House with ranks less strong, numerically, than were at its back prior to the general election.

The Government, of which Mr. Ross is the leader, has been, in many respects, a good one. It may have been less economical than its friends claim it to be, but it has certainly administrated the affairs of the Province in a more business-like way than has been the rule in the other Provinces of the Dominion. In regard to New Ontario, its policy is certainly to be commended, and it took hold of the railway question in a practical and business-like way, with the result that the Tamiscaming road is now in process of construction under the management of a commission.

Notwithstanding, however, the many redeeming features about the Government, it has undoubtedly lost a great deal of its popularity in the eyes of the people. In fact, the numerical strength of the Government in the house is scarcely a reflection of its strength in the country, some 7,000 more votes having been cast for their political opponents than for themselves.

The fact that the Government has lost prestige is scarcely due to the strength of the Opposition, or to any policy which it enunciated. To what, then, can be ascribed the cause? In the first place, the cry that the present party had been in power for a generation and that, therefore, it was "time for a change," no doubt influenced a great many votes. But the greatest of all factors was the strong opinion prevalent that the Government was surrounded by officials who were only too ready to resort to acts of corruption in order to keep their party in power.

In other words, a Government that was on the whole a fairly good one has had its reputation badly sullied by the officials who surround it.

While some of the Ministers of the Crown have recently been mixed up in matters which are not to their credit, we believe that the great majority of them, while not brilliant, are at least of average ability, and would not lend themselves to acts of corruption, but at the same time they cannot escape the responsibility for the acts of their officials any more than can business men escape responsibility for the acts of their employes while performing their services.

Before the Ross Government can really possess the confidence of the people it must show a more intense desire to punish ballot manipulators and ballot stuffers, then it has in the past. It must show that it is more willing to relinquish office than to retain it by the employment of any other than legitimate means.

It is of no interest to HARDWARE AND METAL whether the party in power be Liberal or Conservative, but it is of importance to it that the Government should be a good one, and that it holds the reins of office by merit and not by methods which would not be for one moment countenanced in the affairs of everyday life.

BUILD THE RESIDENCE.

THERE is quite a little discussion in Toronto University circles these days in regard to the relative merits of a residence and of chapter houses for the students.

A great deal is, no doubt, to be said in favor of both. It seems to us, however, largely a question of cutting the garment according to the cloth. It is a common complaint that the University is somewhat crippled for the want of sufficient funds to carry on the educational work of the institution. Under the circumstances, therefore, the preference should be given to the residence. The policy, however, of the Government, and of the Board of Trustees appears to be of the contrary character, they having already advanced money for the building of two chapter houses which are rather swell affairs, and only intended for students of more than moderate means.

A residence, on the other hand, would be for the accommodation of men of moderate means; and from this standpoint the argument is very strongly in its favor. Instead of having a number of exclusive establishments like the chapter houses, it would be much more conducive to the welfare of university life to have a residence, wherein the large number of students from outside points could find a home at a moderate cost.

The economical phase of the argument is not, however, the only one. There is another that is perhaps equally strong, and that is in regard to the influence which life in a residence would have upon the students. By being brought into touch with each other in home life the tendency would be to broaden their minds and make them more fitted for life's duties.

It seems to us that the residence idea must eventually prevail, as the arguments in favor of it are so much stronger than those in regard to the chapter houses.

Of course, an important matter to be taken into consideration is the character of the Dean of residence. He must be a large man in the mental sense of the term and one who has sympathy with the students in their work. No one in the University probably will have greater opportunity for stamping his individuality on the students, and this makes it all the more important that he should be the man we have described.

THE HIGH COMMISSIONER'S SECRETARY.

MR. J. G. COLMER, who, the other day resigned his position as secretary to Lord Strathcona, has been a faithful servant of Canada during the time he has held office. While handicapped by the fact that some years had passed since he was in active touch with Canadian industrial life and thought, he has, on the whole, performed his duties creditably, and has always been zealous to advance the interests of Canada in Great Britain. It is to be hoped that in his new sphere he will meet with that degree of success which he deserves.

In appointing a successor to him, it is gratifying to know that a Canadian has been appointed. A few years ago there were clerks in the High Commissioner's office who were dense in regard to Canadian geography. There was one clerk, for example, who, when asked for information regarding Regina, declared there was no such place in Canada.

LABOR UNIONS AND RESPONSIBILITY.

JUDGMENT was given in Toronto on Wednesday in an interesting case in regard to the responsibility of labor unions.

The case was brought by The Metallic Roofing Co., of Toronto, against the Amalgamated Metal Workers' International Association. Originally the case was brought against the officers of the local Association, but the writ was amended subsequently in an effort to make the International Association co-defendent. The court, however, holds that the Association, not being an entity in the eyes of the law cannot be sued. The case against that organization was, therefore, dismissed. The court, however, held that the officers of the local Association, which inaugurated this strike at The Metallic Roofing Company's works, and is alleged to have instituted the boycott against that company, can be proceeded against. We understand it is the intention of the company to carry on the suit along these lines.

The case is similar to what is now known as the famous Taff Vale case in England, where a railway company brought suit against the Amalgamated Society of Railway Servants to recover $135,000 damages on account of a strike instituted by the railwaymen's society. In this case judgment was given for the plaintiffs, the defendent organization having been granted power by the Legislature to hold property.

Sir Alfred Wills, who was the presiding judge on the Taff Vale case, in delivering judgment, said that it was time for a judge occupying as responsible a position as that held by him, to have the courage to express his opinions respecting the perpetual attempts of trades unions to shuffle out of the responsibility of their acts. He said that the evidence was overwhelming and that the union in this instance had organized and conducted an illegal conspiracy to molest and injure the defendent corporation.

As far as the Toronto case is concerned, The Metallic Roofing Company can certainly claim that their business has been molested and injured, for to-day the boycott on The Metallic Roofing Company in Toronto is so severe that the only way in which it can get its goods placed in position in buildings in Toronto is to have it put up by their own workmen. In fact, they are practically prevented from doing business in Toronto, because of the sympathetic action of other unions. The strike arose, it might be said, over the refusal of The Metallic Roofing Company to discharge old and tried employes who had refused to join the union.

It is evident that the point of future agitation in regard to labor organizations will be as to incorporation. Where there is no incorporation there is not entity, and as the Toronto case just recited shows, an organization cannot be held responsible unless it is incorporated. In Massachusetts an agitation is already on foot to compel the unions to incorporate.

After the experience of the Taff Vale case it is questionable, however, whether many unions will be anxious to become incorporated. At the same time, it is only just and proper that they should be incorporated. To compel them to incorporate would be a questionable proceeding, but certainly by persuasive methods every effort should be made to bring about what obviously is so necessary.

At present when employers enter into an agreement with the unions, there is no guarantee that it will be observed. In fact, we have had instances in both Canada and the United States during the last few years where agreements have been flagrantly broken.

It seems to us that union men will be furthering their own interests by seeking incorporation. When incorporated employers would have less excuse for refusing to recognize the representatives of the unions when waiting upon them in regard to grievances that may exist.

As long as there is not this incorporation, employers cannot be blamed for refusing to recognize that which the courts have decided has not responsibility.

INSURANCE AS AN INVESTMENT.

IT is not many years years since that insurance was looked upon as merely a protection for the persons dependent upon the insurer for the necessities of life. Many people indeed, even to-day, see nothing more than this in it. True, this was the original and should always be the main object of all insurance. There is no way that a man can provide an absolutely secure protection from want for his family in case of his death, but any one of the well-established of our Canadian companies, guarded as they are by strict laws and Government inspection, comes as near furnishing the means for it as it is possibly to get.

A new idea, however, has during the last few years, connected itself with life insurance, viz., investment. Business conditions are not to-day what they were a few decades ago. The opportunities for developing a business on a small capital are not as they used to be. It is the age of joint-stock companies, trusts and large amalgamations of capital. Even the millionaires to-day find the benefit of coalition with large monied interests. As this period has developed the older insurance companies have found themselves in the happy position of having large funds ready to cope with the situation. They find themselves in much better position for investment than any ordinary individual can be, since investments seek them rather than they the investments. Men have found that the insurance policies they held have returned them profits almost if not equal to any of their other ventures. They had actually become stockholders in large and profitable loan businesses.

The new idea is legitimate. Take an individual case. Suppose a man has money to invest. It is a good proposition, indeed, that will to-day yield him over 4½ per cent. over and above the cost of investment. Suppose he puts the money into an insurance policy. It is a well-known fact that almost any of the larger companies will refund him all he pays in, and at least 3 per cent. on his money at the end of 20 years, or whatever the investment period may have been. You say this is 1½ per cent. less than he could have made otherwise. This may be true, but what else has he had? He has been saved all the worry of handling the money, he has run almost no chance of losses, and above all, he has, during almost the whole period, had insurance protection amounting to many times what he had paid the company. Surely 1½ per cent. on his money was a small price to pay for this, and in many cases even this cost almost entirely disappears. It would certainly seem that he had had a good investment.

We have no doubt that insurance methods can and will be still more perfected, and that a policy in a strong company will become more and more a good proposition for investment, but we must acknowledge that even to-day insurance carries with it a great deal more than the idea of mere protection. It is also a secure way of having idle money handled to our advantage.

MARKETS AND MARKET NOTES

QUEBEC MARKETS

Montreal, March 6, 1903.

HARDWARE.

EVERYTHING points to the heaviest spring business in years, all houses being worked to their full capacity, and several have doubled their shipping staff so that they could manage to keep well up with orders. As one dealer puts it: "A great year is expected." American goods are still hard to get, all factories being behind with their orders. The price of Irwin auger bits has advanced, and they are now quoted at 25 instead of 40 per cent. off. The prices of all kinds of brass valves have advanced, and they are now discounted at 50 per cent. Malleable fittings have advanced 10 per cent. in the United States, which means 12 to 13 per cent. in Canada. The discount on pressed spikes has been changed from 22½ to 20 per cent. The market generally, however, is steady and no great changes are looked for in the majority of lines at present. We might state that the present indications point to a great business in freezers during the approaching season.

CANT HOOKS.—A brisk business is reported. We quote as follows: No. 12, $10; No. 8, $11.50; No. 8a, $11; No. 2, $12; No. 7a, $16; No. 6a, $14.50; No. 5a, $11.50.

LAWN MOWERS.—The demand is indeed good for spring shipment. Our quotations follow: 10½ in. wheel x 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—There is a fair inquiry for barb wire and a steady market. We quote as follows: $2.80 per 100 lb. f.o.b. Montreal; $2.45 f.o.b. Cleveland in carlots of 15 tons, and $2.67½ f.o.b. Cleveland in smaller lots.

GALVANIZED WIRE.—The market has improved somewhat during the past week. We quote: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—There is only a limited demand at unchanged prices. Quotations follow: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FENCE WIRE.—Inquiries for fence wire are daily being received. The discount is 25 per cent. with the following extras: 1 and 2 lb. hanks, 25c. per 100 lb.; ½ lb. hanks, 37½c. and ¼ lb. hanks, 50c.

BRASS AND COPPER WIRE.—The market is firm and the demand brisk. The discount is now quoted at 60 per cent.

PRESSED SPIKES.—The discount is 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—A heavy spring trade is being done in fence staples, with prices very firm. We quote as follows: $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—Business is reported good at last week's quotations, and our prices are as follows: Carlots, $2.10 and

small lots, $2.45 per keg f.o.b. Canaanque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—This market is very active and prices are liable to change at any time. Our quotations are still as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 10, 10 and 7½ per cent. off; "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—There is no further advance reported and the market is now steady. Our quotations are as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.40; No. 1 and smaller, $3.65; snow pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.55; No. 1 and smaller, $3.80; featherweight, all sizes, 0 to 4, $5.10; toe weight, all sizes, 1 to 4, $6.35. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—A decided improvement is noted in this line during the past week. Discounts are as follows: Best iron rivets, section carriage, and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—There is a good demand, but the stock is none too large at present. Discounts are as follows: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent., machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3¼c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—A better feeling seems to exist on this market and a good business is doing. We quote: Round head bright, 82½ and 10 per cent.; flat head bright, 87½ and 10 per cent.; brass, round heads, 75 and 10 per cent.; brass, flat heads, 80 and 10 per cent.

CORDAGE.—The demand is steady and prices unchanged. Our quotations follow: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 10½c.; single lathyarn, 10c.

BUILDING PAPER.—There has been a large number of orders received during the week for March and April shipment. Quotations follow: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 55c. per roll; tarred fibre, 60c. per roll. O K and I X L., 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—The demand is brisk at unchanged prices. We quote $1.40 per 100 square feet.

FIREBRICKS.—A few good orders have been booked during the week. We quote as follows: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

OPEN HEARTH STEEL

CEMENT. Dealers expect cement to improve from now on as contractors are preparing for the spring work. We quote: Canadian cement, $1.90 to $2.25; German, $2.[illegible] to $2.[illegible]; English, $2.15 to $2.25; Belgian, $1.75 to $1.95 per bbl. ex-store, and American, $2.10 to $2.20 ex cars.

SNOW SHOVELS. The closing season is reported as having been better than [illegible] years. We quote as follows: "Hamilton," $2.25 to $2.40; "Victor," 44 per cent. off; steel railroad shovels, 48 and 5 per cent. off.

FIRE SHOVELS. There are few fire shovels moving and the market is quiet. The discounts are quoted as follows: No. 70, 38½ to 40c. per doz.; No. 55, 55 to 60c.; No. 57, 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

COAL HODS.—Our quotations are as follows: Japanned, 16 in., $4.50 per doz.; 17 in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—The market continues very firm, and the demand steady. Our quotations are: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dashboard, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

There is still a scarcity in some lengths of bar iron, but the market seems somewhat easier than last week. Ingot copper has advanced about 25c. per 100 lb., and is expected to go higher. The pig lead market has also advanced, and lead is now quoted at $3.20 for carlots. The market generally, is fair and there is a very bright outlook for the coming season. The foreign market is without feature and very few changes have been reported during the last ten days. Ingot copper is very strong in England and the local agents expect an advance in the near future. Canada plates are in good demand and the market is steadier than for several weeks past. Apparently the scarcity reported here in pig iron has not, as yet, been felt on the English market. We quote:

BAR IRON.—The demand continues to be good, but the stock is not large, some lengths being very scarce. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS.—There is a fair trade doing in black sheets. Our prices are: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—Prices are unchanged and the market is fairly active. We now quote: No. 28, Queen's Head, $4.40; Apollo, 10¾-oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand $4.05. For less than case lots 25c. extra is charged.

LEAD PIPE.—A good movement is reported in lead pipe. We quote: Composition and waste at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—The market is brisk and prices firm this week. Quotations are as follows: Standard pipe, per 100 feet, in lengths under 19 feet: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1-in., $5.20; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.15; ½, $3.85;

Factory: Fort Wayne, Indiana.

65 FRONT ST. EAST, TORONTO

¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $1.20; ¾, $5.25; 1 in., $7.55; 1¼, 110.55; 1½, $12.75; 2 in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1 in., $9.55; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.

TINPLATES. There is a good trade doing and the market is firm. We quote as follows: Coke, $4.25 to $4.50 and charcoals, $4.75 to $5.

SOIL PIPE AND FITTINGS. The outlook for spring is bright and dealers are booking some large orders this week. The discounts are quoted as follows: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8-inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.--The demand for pig iron is good, but dealers find difficulty in filling orders. We quote $23.50 to $24.50 ex store Montreal, and an advance is looked for.

INGOT COPPER.—There is a slight increase reported in ingot copper, and we quote $14.25 to $15.25 per 100 lb.

INGOT TIN.—The tin market is very firm and prices are said to be advancing. We quote $33 to $33.50 per 100 lb.

PIG LEAD.—There has been an advance in pig lead since our last report. We quote $3.20 for carlots and $3.25 for less than carlots.

STEEL.--A good demand is reported. Quotations are as follows: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; sqdare harrow, $2.15.

TOOL STEEL.—The market is brisk and prices are steady. Our quotations are as follows: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES. There is no change in the condition of this market this week. Our quotations are as follows: 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES. The market is quiet and we quote $7.50

COIL CHAIN.—The demand for all kinds of coil chain is very brisk. We quote: No. 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼-in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75; ¾, $5 to $5.20; ⅞, $3.30; 1-in., $3.15 to $3.25. In carlots an allowance of 10c. is made.

SHEET ZINC.—The market is firm at from $5.75 to $6.

ZINC SPELTER.—Business is good and the prices have advanced. We quote $5.75 to $6.

SOLDER.—We quote: Bar solder, 20c. and wire solder, 18c.

SCRAP METALS.

As the spring approaches business improves and dealers are being rushed this week. Copper is very firm and an advance is daily looked for. Iron is also reported to be stronger, although the prices have not as yet been changed. Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50; No. 2, $7.50 per ton; machinery scrap, $17.50 to $18; stove plate, $13.; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¾ to 6½c. per lb.

HIDES.

There has been no change in the hide market since our last issue, and it is reported to be very quiet. We now quote: No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c.; calfskins, 8 to 10c. and lambskins, 75c.

MONTREAL NOTES.

Auger bits have advanced about 15 per cent.

Ingot copper has advanced about 25 per 100 lb.

Pig iron is still reported scarce on the local market.

The Canada Hardware Co., Limited, of Montreal, are sending out a list of special prices on articles damaged by smoke and water in their recent fire.

ONTARIO MARKETS

HARDWARE.

Toronto, March 6, 1903.

THE market continues to manifest a healthy tone, though the movement is light as compared with what it will probably be in a month or so. Orders for spring delivery are almost all in, but sorting orders are coming in daily. As the snow is well away in Western Ontario requests for deliveries, particularly of heavy materials and some lines of harvest tools, are being received from that section. The demand for plumbing goods, especially iron pipe, keeps up nicely. The heavy sale of machine bolts is attracting attention to the remarkable activity in iron working industries throughout the Province. The demand for screws has been accelerated by rumors of a probable advance. Pressed spikes are dearer, the discount having been reduced from 22½ to 20 per cent. Otherwise there is no change, though it seems altogether likely that an advance will be made in screws before long.

BARB WIRE. It is early yet for the movement to set in, yet requests for immediate delivery are starting to come in. The base price is quoted as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

COIL SPRING WIRE.—The movement is slowly getting under way, the counties of Essex and Kent being ready for deliveries. Prices are firm. We now quote: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

GALVANIZED WIRE.—Deliveries are light, but are likely to increase steadily. The prices are steady this week, and we quote: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—Oiled and annealed are being asked for on Western Ontario account. We quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—Orders are still coming in fairly well and deliveries are being made. There are no changes in the prices. We quote: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS. There is nothing doing. We quote $2.50 per keg.

HORSE NAILS.—A fair business is reported for so early in the season, but the bulk of the business has yet to come. The prices are steady. The discounts are: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent. and "Countersunk" head, 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—Trade is quiet, yet satisfactory for this time of the year, and our quotations are still as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; featherweight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—A well founded rumor has been heard "on the street" to the effect that the price of screws are to be advanced in the United States. In consequence, the trade is covering itself in expectation of a similar advance on this market. We quote: Flat head bright, 87½ and 10 per cent. discount; round head bright, 82½ and 10 per cent.; flat head brass, 80 and 10 per cent.; round head brass, 75 and 10 per cent.; round head bronze, 65 per cent. and flat head bronze, 70 per cent.

RIVETS AND BURRS. A satisfactory trade is reported, and our quotations are as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—An excellent demand is noted on city account, particularly for machine bolts, and jobbers are experiencing difficulty in securing supplies. Prices are unchanged this week. We quote: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Trade is picking up. Quite a few shipments are being made. The discount is 45 per cent. and the list price has been reduced $3 per dozen for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—There is no change. The demand for immediate shipment is quiet. A few orders are coming in for later delivery. Prices are unchaged this week. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—Orders for delivery are coming in for many lines from Western Ontario and a good movement is looked for in the next week or two. There are no changes in the discounts, which remain at 60 and 10 per cent.

LAWN MOWERS.—There is very little doing. The prices are firm. We quote: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

BRASS RODS AND TUBING.—A brisk trade continues and we now quote: Tubing, 3-16, 50c.; ¼, 35c.; 5-16, to 2 in., 28c. Pipe, ¼, 35c.; ⅜, 28c.; ½ to 3 in., 25c.

BUILDING PAPER.—A fairly active demand is noted, with prices firm throughout. We now quote: Dry sheathing, grey or straw, 40c. per roll; tar sheathing, grey or straw, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll.

RANGE BOILERS.—A fairly steady demand is noted. Last week's reduction of 50c. is maintained. Our quotations are as follows: 18 and 30 gal., $5.50; 35 gal., $6.50; 40 gal., $7.50; 52 gal., $12.50; 63 gal., $19; 82 gal., $23; 100 gal., $31 and 120 gal., $37.

SCREEN DOORS.—There is no movement yet. Prices are steady. We quote: Screen doors, common, two or three panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3 inch style, 20c. per dozen less.

CEMENT.—Business is picking up nicely and the indications are that the home production this season will not be large enough to supply the demand and imports will be considerable. We quote as follows: Canadian Portland, $2.40 to $2.50 and hydraulic, $1.35 per barrel.

METALS

While import orders this year for all kinds of metal have been unusually large, one of the best features of the market has been the activity in the demand from stock. The briskness continues this week in all lines. The demand for pig iron continues keen. Tool steel is selling more freely. The sales of black sheets, Canada plates and galvanized sheets have increased during the past week or so. Orders for tinplates are liberal, owing to advancing markets. The prices are firm throughout, tin showing another advance of 25c. A feature in the iron pipe trade is the generous buying for large sizes, which are being used for pillars.

PIG IRON.—The heavy demand continues. Canadian furnaces are sold out of No. 1, but are selling a special grade for mixing at $22.50. No. 2 Summerlee is quoted at $25 on track, Toronto.

STEEL BOILER PLATES.—The demand is more active. We quote from $2 to $2.25, Toronto.

TOOL STEEL.—Business is more active. The prices are firm. We quote as follows: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MILD STEEL.—Prices are well maintained. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—No change, and we quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—The activity continues. The prices are firm. Quotations are: $2.05. For extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—The demand is improving. Prices are steady. We quote: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—A better trade is doing. Prices in England are firm. We quote: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—The brisk sale continues. Prices are steady, and our quotations are as follows: Queen's Head, $4.50 for 28 gauge; American, $1.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The prices have advanced 25c. in sympathy with a heavy rise in foreign markets. We quote $32.25 to $33.25.

TINPLATES.—Orders for import are being freely booked and it is felt that at the present figures this metal is a good purchase, owing to steady advances in the English market. We quote as follows: Charcoals, $4.75 to $5 and cokes, $4.25 to $4.50 per box.

COPPER.—The English and United States markets show heavy advances and prices are stiffening here. Ingot is 50c. higher. Both Ingot and sheet copper are

in excellent demand here. We quote: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS. Unchanged. The discount is 15 per cent.

LEAD. The activity is still manifest. Prices are unchanged at $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE. There has been an excellent demand. Many orders are coming in for the large sizes, from 8 in. up, for use in building purposes as pillars. Prices are firm, and our quotations are as follows per 100 ft.: Black pipe, ⅛ in., $3.25; ¼ in., $2.40; ⅜ in., $2.65; ½ in., $2.85; ¾ in., $3.65; 1 in., $5.20; 1¼ in., $7.35; 1½ in., $8.95; 2 in., $12.55; 2½ in., $21; 3 in., $25; 3½ in., $32; 4 in., $38.

ZINC SPELTER. This is in good demand. Prices are steady at 5 to 6c. per lb.

ZINC SHEETS. The demand is excellent and prices are steady. We quote the base price as follows: Cask lots, $6 to $6.25 and part casks, $6.25 to $6.50.

SOLDER. A fair amount of business is being done. Prices are stiff, owing to the higher value in tin. Guaranteed half and half is quoted at 18 to 19c. and wiping at 17 to 18c.

ANTIMONY.—Business is in small lots. The price is steady at $9 per ton.

PETROLEUM.

The demand is easing up and prices are steady this week. The Union Petroleum Company's prices are as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

SEEDS.

The export of alsike has entirely ceased, leaving what appears to be too large a stock in the country for the domestic trade. The soft weather has scarcely been with us long enough to get the jobbing trade going. Alsike is 25c. cheaper and will be lower. Red clover and timothy remain unchanged. We quote as follows: Alsike, prepaid aboard at outside points, per bushel, $5 to $6; red clover, prepaid aboard at outside points, per bushel, $6.50 to $7.25; timothy, prepaid aboard at outside points, per bushel, $1.75 to $2.25.

MARKET NOTES.

Screws are likely to advance.

Tin is 50c. higher in sympathy with advances in England.

Copper continues to advance in the United States and England.

Pressed spikes are dearer, the discount being reduced from 22½ to 20 per cent.

GLASS PRICES WITHDRAWN.

Since our market reports on window glass went to press we have learned that some of the Belgian glass houses have withdrawn their quotations, and that some of the Canadian houses are thus compelled to withdraw their quotations on import orders. This will add much to the stiffness of the local window glass market, though stock prices remain unchanged.

FOREST CITY GOSSIP

Office of "Hardware and Metal."
London, March 5, 1903

THE same favorable conditions in the hardware trade continue as last week, viz., a good, lively trade in all general goods. The finer, clearer days strongly reminding one that spring cannot be far distant, have given opportunity for out-door workmen, such as painters, glaziers, plumbers and carpenters to begin work early, and take chances of continued good weather. Therefore, the descriptions of hardware goods used by these various tradesmen are now in good demand. There is much building and many alterations and improvements going on in this city alone, and the work is commencing very early. Should favorable weather continue, an unusually large number of dwelling houses and other buildings will be completed sooner than usual. This fact, in conjunction with building operations all over Western Ontario, will materially further the demand for builders' supplies. And the "Forest City" will largely share in the benefits of the present boom.

* * *

The organization meeting of The Canadian Tinplate Co., Limited, was held a few days ago at the Masonic Temple in this city. The election of directors resulted in the choice of E. T. Dufton and A. Tilley, of Stratford; J. W. Thompson, Albert E. Donovan and J. T. Thompson, of London. The board of directors chose J. W. Thompson, as president; I. T. Tilley, vice-president; I. T. Thompson, secretary, and A. E. Donovan, manager. The new company have launched into a business for the making of decorated tinware. There are only two other concerns of the same nature in Canada, one in Montreal and the other in Toronto.

London is to be congratulated upon securing the establishment in this city of such a progressive and labor-employing concern as The Canadian Tinplate Co., Limited. After the business meeting, the stockholders were taken to the factory and shown the plant. The various steps necessary in the making of the artistic tinboxes, etc., were made plain by the manager, Mr. Donovan, who was in charge of Somer's Bros. factory in Brooklyn, N.Y., for many years.

* * *

This is about the regular time every year when tenders are received by the London city council for the various public works in control of the city's board. It was a significant fact that every tender submitted this year, with the exception of those on cement walks, which were ¼c. lower, were higher than the tenders for the same work last year. The difference is attributed to the fact that prices on nearly all material have recently advanced.

* * *

The milder weather has had something to do with the lower price at which London is purchasing her coal; the retail price is now $7 for hard coal.

* * *

A good sprinkling of commercial travellers, who represent London's hardware and metal interests, were present at the travellers' smoker last Saturday in the Temple Building. They're a genial lot; yes, sir, the London commercial travellers are a good sort.

MANITOBA MARKETS.

WINNIPEG, March 2, 1903.

THIS week has shown a quiet, steady trade in all lines of hardware and no change in prices. The energies of all hardware houses are concentrated on getting out spring goods as fast as possible. There will be an immense amount of barb wire used in the country this season, and there is a steady increasing demand for building hardware.

In paints, oils and glass there is considerable movement, and in turpentine the advance of last week is maintained, and there is a tendency for even higher prices. Linseed oil is again quoted at the same figure as last week.

Implement dealers have got the bulk of their shipping done, and advices from eastern factories would indicate that supplies will hardly equal demand this season.

We quote as follows :

Barbed wire, 100 lb.	$3 25
Plain twist	3 25
Staples	3 65
Oiled annealed wire ... 10	3 42

CATALOGUES, CALENDARS, ETC.

A PRETTY CALENDAR.

Very handsome indeed is the calendar for 1903, issued by the Equitable Life Assurance Society of the United States. It is arranged on six pages, size 13 x 10 in., which are held together by a silk ribbon. On each of the pages is a beautiful representation of "A Bit of American History," all being cuts of ladies displaying the American fiag at different periods in its history ; they are in order : "The Flag of Our Own Times," "Our First National Flag," "Our Pine Tree Flag of the Navy," "Our First Union Flag," "Our Liberty Flag," and "Our Rattlesnake Flag." The plates are exceptionally fine, the outline and color combining to give an exquisite effect.

CANADIAN AXES AND TOOLS IN AUSTRALIA.

The Australian correspondent of Commercial Intelligence, London. Eng., writes: "The Canadian and American axes are preferred by reason of their strength and lightness as compared with the British article. It is the same with claw hammers and other tools.

A MOUNTAIN OF ICE CREAM IS ANNUALLY MADE IN THE

White Mountain Freezer

Thousands of people who eat it say that it is the best cream, and suggest the "White Mountain' as the most complete and satisfactory ice cream freezer made. This popularity makes "White Moutain" Freezers easy and profitable to sell. The dealer who tries to sell any other is badly handicapped, for the dealer who sells the "White Mountain" gets the business. If you haven't a full knowledge of the "White Mountain" proposition, it is to your interest to investigate it now.

THE McCLARY MANUFACTURING CO.

London, Toronto, Montreal, Vancouver, Winnipeg and St. John, N.B.

THE WESTERN FOUNDRY CO., LIMITED.

THE Brantford Ont. papers have lately been saying some nice things of A. B. G. Tisdale, one of the representatives of the above named company. One of them expresses itself thus: "The name Tisdale, of Brantford, is familiar with many Canadians, and to the stove and hardware trade particularly. The late B. G. Tisdale was one of the first Canadian iron stove founders. His son, Arthur B G. Tisdale, grew up in the stove business, leaving it to manufacture iron stable fittings, having an excellent business until the arrival of electricity and the bicycle. He afterwards was connected for a number of years with The Gurney Foundry Co., Limited of Toronto, but recently severed his connection with them, taking an interest in The Western Foundry Co. of Wingham, Ont., with his former associates of The Gurney Co., who established their business at Wingham last year for the manufacture of stoves of all kinds. Few men have a more extended acquaintance throughout Canada, and have more popularity with the stove buyers of Ontario than Arthur B. G. Tisdale, whose many friends will wish success to The Western Foundry Co., Limited of Wingham, Ont. Mr. Tisdale will continue to reside at Brantford."

This company have erected a large temporary addition to their moulding shop, which will be replaced by a permanent structure as soon as weather permits. The patterns for their wood cook, with steel oven, are now ready for the sand, and will likely be on the market in a few days. In a few weeks they hope to have on the market their new steel plate ranges, the manufacture of which has necessitated the installation of a plant costing several thousand dollars.

THE BELLEVILLE HARDWARE CO., LIMITED.

For a company a few weeks less than two years old, The Belleville Hardware Co., Limited, manufacturers of locks, builders' and other light hardware, Belleville, Ont., have made excellent progress. When the company started, under the superintendency of the present manager, W. C. Springer, machinery of the very latest designs was procured. It was not long until it was deemed wise to add to the company's capital stock and to purchase the present extensive premises, which give the firm about 25,000 ft. floor space.

The specialty of this company is brass and bronze goods in builders' light hardware. They are also open to contract for the supply of castings in brass' bronze and light grey iron.

Owing to the rapid increase in their business, this firm is now making considerable extensions. New machinery is at present being added, and the number of hands employed, 40 at present, is being increased.

SYDNEY'S RETAIL CLERKS.

The Retail Clerks' Protective Association, of Sydney, held an enthusiastic meeting recently. A large amount of business was transacted, special attention being paid to the early-closing question. The reports of the various committees show remarkable success, the business men having given great encouragement. The following officers were installed :

President—J. L. Bray.
First Vice-President—H. T. Payne.
Recording-Secretary—S. S. Aymar.
Second Vice-President—J. Connick.
Treasurer—E. M. Reid.
Financial-Secretary—W. R. Keirstead.
Guardian—C. Harshman.
Guide—W. B. Bowser.

FORCED TO EXPAND.

Baines & Packover, manufacturers' agents, Toronto, have found it necessary, owing to the rapid extension of their business, to take over the second floor of the large premises they now occupy on Bay street. This addition, together with the floor and basement they now occupy, will give them room for an excellent stock of the lines they carry.

WELL-BORING MACHINES IN CHIN A

Wm. Martin, United States Consul at Nankin, China, writes that much of the water used in that city is filthy. He sank a well and thus secured, clear, pure water His well aroused so much attention from Chinese officials in many of the cities about Nankin, that he says an excellent opening has been made for artesian well supplies. He has already had an inquiry from a Chinese engineer, who proposes to sink some wells. He requests all manufacturers of machines for diking, deep well boring and windmills to send him catalogues, books, and information regarding prices and probable freight charges to lay down the goods at Shanghai, China.

ROLLING MILLS STARTED.

The London, Ont., Rolling Mills, owned by John White of The London Bolt and Hinge Works, have started operations, and will be putting their product on the market in a few weeks.

PAINT, OIL AND BRUSH TRADES

THE TURPENTINE SITUATION.

[illegible] stocks of turpentine are now interesting the producers and factors of the south, as well as the spirits trade to a large extent. Producers seem to have set their hearts on 50c. spirits for May August delivery, but sales cannot now be made at that figure. This makes the future market dull, as buyers and sellers fail to get together. With stocks now light and receipts small and the spot price apparently hung up at 65c., the producers are encouraged to stick to their demand for 50c. contracts for midsummer delivery. Much, however, will depend on the box cut on the new crop.

Last year the operators agreed on a substantial decrease in the box cut and output of spirits. As a result of this agreement the cut was decreased from 25 to 35 per cent. and the output fully 15 per cent. Meantime the turpentine market has been broadening, and while the supply has decreased the demand has increased. This has resulted in the present scarcity of spirits and the high prices that have culminated in a 65c. quotation in February the highest price ever known in the trade. The question now is, what policy will be pursued during the coming season and what will be its effect on prices.

One year ago spirits of turpentine were selling in the Savannah market at 42c. Last May the market was 45c. and in August, 44c. Producers who look for 50c. spirits in May-August of this year are basing their expectations on a probable advance of 5 to 6c. over last year's prices. As the spot market is now 23c. over the quotation of a year ago, they think they demand for 50c. for futures is quite within reason.

It is admitted that the box cut this year will be greater than last year, the only question being how much greater. Leading factors who have most reliable sources of information say that the increased box cut is not over 10 per cent. of last year's cut and that even with this increased cut there will be a decrease in the output. Others make a similar report and prediction, estimating the increased box cut at 12 to 15 per cent. over last season, but maintaining that the output will be materially curtailed. The general verdict is that there will be considerably less turpentine made in 1903 than in 1902. If this proves true it will have grave significance to the trade. Instead of 50c. spirits in May-August, the price may mount much higher.—Paint, Oils and Drug Reporter.

LUMINOUS PAINT.

A formulae for luminous paint is given by La Nature, as follows, the figures parts of the ingredients: (1) Yellow paint varnish, 25; sulphate of barium, 5; ultramarine, 6-4; cobalt blue, 5-4; sulphide of calcium, 17. (2) Blue varnish, 12; sulphate of barium, 10-2; ultramarine, 6-4; cobalt blue, 5-4; sulphide of calcium, 16.

THE LINSEED OIL TRADE.

Special attention is drawn to the advertisement of The Canada Linseed Oil Mills, Limited, of Montreal, who are manufacturers of raw and boiled linseed oil, and are in the market to purchase a large number of oak, linseed oil, turpentine, varnish and machine oil barrels. Parties having such barrels to dispose of will do well to communicate with them.

PAINT AND OIL NOTES.

Building laborers at St. Catharines, Ont., including both painters and plumbers, are on strike.

Guelph, Ont., painters to the number of about 25 men, are on strike for an advance in wages.

The agreement between the Brantford master painters and the union has expired, and some of the employers are hesitating about signing it again.

Harry Henderson, recently of Collingwood, Ont., has accepted the position of Toronto representative of The Toronto Lead and Color Co. He is rapidly getting acquainted with the hardware dealers of the city.

The master painters of Toronto are endeavoring to make a change in the agreement between themselves and the journeymen's union, whereby three apprentices may be employed in each shop, instead of two as at present.

BENZINE AND TURPENTINE.

With turpentine up to 95c. and some measuring lots selling as high as 99c., it is scarcely to be wondered, though it is to be deplored, that certain dealers are mixing benzine with it. This is not an uncommon practice when it is desirable to cheapen the article, though we have yet to hear of its being recognized by the most reputable firms. The drying qualities of the turpentine are, to a certain extent spoilt, though otherwise there is no material difference. To avoid getting any of this turpentine it is best to buy from the most reputable houses. They are represented in our advertising columns. Benzine has advanced 1c. and is firm.

PAINTS AND OILS.

MONTREAL.

TURPENTINE continues to go higher, but linseed oil remains stationery, with a fair demand. One dealer remarked that if turpentine continued to soar it would be soon relegated to the drug store and sold in bottles as liniment, and the chemists of the country and the technical schools would be actively employed to find a substitute for this fluid. With the advent of spring heavy shipments are reported in paris green and business generally, in paints, colors and varnishes is announced as thoroughly satisfactory. We would call the attention of our readers to the changes in the price of putty, a reduction having taken place. Benzine is reported to be very firm and is quoted 1c. per gallon higher than a week ago. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75 all f.o.b. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

TORONTO.

The movement of general sundries, and particularly prepared paints, keep exceedingly active. There is a moderate inquiry regarding white lead, but the demand for it as well as for the other staples, turpentine, linseed oil and paris green is very light, the few orders being of decidedly small size. Prices are unchanged throughout. Turpentine is 1c. lower in New York than a week ago, but unaffected here. White lead prices are irregular, but there is no change in quotations. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.00 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25 lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5 gallon lots, 60 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100-lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 95c.; 2 to 3 bbls., 94c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

WINDOW GLASS

MONTREAL.

The glass market is without feature other than a slight improvement in the sales, but as yet only a small amount is moving. The local market has improved, and as building will be extensive in Montreal this year, a large amount of business is looked forward to. Quotations are as follows: First break, 50 feet, $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

TORONTO

Prices are well maintained in England, but the movement for higher prices here seems to have been ineffective. A fair movement for this period of the year is reported. Our quotations are as follows: Star, Under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

HALIFAX and MONTREAL.

INDUSTRIAL GOSSIP

FORTY riveters employed by the Macdonald Engineering Co., Fort William, Ont., on the construction of elevator "E," have struck. They are now paid by piece-work scale, but claim that as they are delayed by lack of materials, a minimum rate per day should be agreed upon. Two hundred men are thrown out of work by the strike.

The strike of the miners of the Crow's Nest Pass Coal Co., Fernie, B.C., has caused a shortage of coke, and it is feared that some of the smelters may have to close down.

J & L. B. Mayer, have purchased a mill at Colbrook, N.B., where they will make coarse and fine excelsior. This firm also propose to erect a foundry in Colbrook in the spring.

Montreal is talking of buying out one of the asphalt paving companies in that city. Three of the companies have offered to sell out, but none of the offers have been accepted to date.

A Winnipeg despatch says that the C.P.R. has awarded the contract for double-tracking their line, from Rat Portage to Fort William, to Foley Bros. & Co., the well-known railway contractors, and work will begin as soon as camps can be started.

The Manitoulin & North Shore Railway Company, which now has legislative authority to construct a line northeasterly from Sudbury, Ont., to Temagaming, desires an amendment permitting construction from at or near the Elsie Mine, Ont., to Lake Temagaming.

The organization of the fettlers, helpers, and laborers employed in the foundries, boiler, blacksmith, machine, brass and metal shops and factories in and around Montreal into a combination under the auspices of the American Federation of Labor has been promptly followed by a movement for an advance in wages.

H & A. Allan have ordered a new steamship similar to the Bavarian and Tunisian for the Canadian service. The tonnage of the new boat will be 10,500 tons. Her delivery is expected in March, 1904. The Allan Line has also purchased two new 5,000-ton freight steamers for the Canadian trade. They are the Hungarian and the Hibernian, bought from the builders on the other side.

NEW COMPANIES INCORPORATED.

The Preservative Co., Limited, Toronto, capital, $40,000.

Foundries Specialties, Limited, Toronto; capital, $40,000.

Keystone Sugar Co., Limited, Whitby; capital, $250,000.

The Reid Wrecking Co., Limited, Windsor; capital, $75,000.

The News Publishing Co., Toronto; capital, $500,000; provisional directors, J. W. Flavelle, J. S. Willison and A. H. U. Calquhoun.

The Standard Cement Co., Limited, Toronto; capital, $500,000; provisional directors, D. Urquhart, George Wilkie and J. R. Marshall, Toronto.

CONTRACTS AWARDED.

The tenders for supplies of iron and steel manufactures, paints, oils, etc., were considered by the Montreal Harbor Board on February 27, and contracts were awarded as follows: Ordinary Canadian iron, Peck, Benny & Co.; forged Canadian iron and Lowmoor iron, Frothingham & Workman; Canadian refined iron and Sun iron, Edward Cavanagh Co.; Norway iron and machinery steel, B. J. Coghlin; pressed spikes and castor oil, Auguste Couillard; wharf spikes, Montreal Rolling Mills; cut nails, Amiot, Lecours & Lariviere; nuts, H. L. Hubert; washers and carriage bolts, Caverhill, Learmont & Co.; gas pipes, ¼ in. to 2 in., Canada Hardware Co.; brass and bronze castings, the Garth Company; iron castings, P. Amesse; steel castings, Canada Switch and Spring Co.; pine pitch, M. McKenzie & Co.; coal oil, J. L. Lafleur; white lead in oil, W. E. Dickson; turpentine, Canada Paint Co.; boiled linseed oil, H. THE FOUR-CHAIN COW TIE.

The accompanying cut represents the four-chain cow tie, manufactured by The B. Greening Wire Co., Hamilton. It is a new thing and is attracting some attention. By the old system of tying stock two beasts are placed in one stall, each being fastened to a pole or iron bar on

their respective sides. By the new system, in which the four-chain tie is used, each beast has a separate stall. The chain stretches across the stall, being fastened on either side to an iron bar, and the animal is chained to the centre of the cross chain.

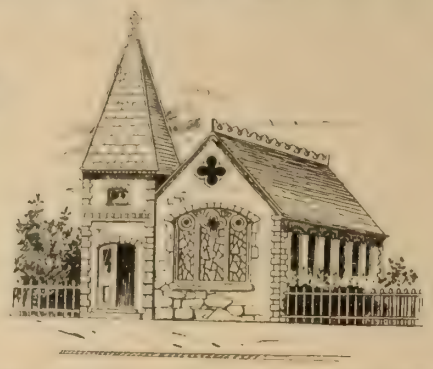
SCHWAB'S OPINION OF LUCK.

Charles M. Schwab, president of the United States Steel Corporation, is quoted as saying, "I believe there are lucky men. I have made it a rule in my life to surround myself with lucky men, and to have no other kind in positions of importance that I control," says a writer in Everybody's Magazine. This sounds like an endorsement of luck, as luck is commonly defined, but it appears that Mr. Schwab, when further questioned, meant by "lucky men" men who had achieved success in what they undertook; that is, men who would not be beaten, but worked indefatigably, were forehanded and far-sighted, and succeeded by their own efforts.

CHURCH'S

ALABASTINE.

READY FOR USE



BY ADDING COLD WATER

The little Church on the label of every package.

EVERYBODY wants ALABASTINE, and why? Simply because it is PERMANENT and SANITARY; is easily applied, and SELLS ON ITS OWN MERITS. Time spent in trying to sell worthless imitations that have neither proof of origin, nor record of value, is worse than lost.

Buying what won't sell ties up capital, and causes real want for necessaries. ALABASTINE WILL SELL, and affords a good per cent. of profit; is a staple in every Hardware and Paint business, as much so as sugar in a grocery store.

ORDER EARLY. Trade lost because you haven't goods in stock, is energy thrown away.

ALABASTINE is made in Canada, by Canadian labor, and from rock taken out of Canadian mines. The trade supplied by Wholesale Hardware and Paint Dealers. Also by

THE ALABASTINE CO., Limited, - - PARIS, ONT.

GLOBE PAINTS

Bank of British North America, for alterations to their office, corner of Yonge and Wellington streets, to cost $30,000 ; Burke & Harwood, architects.

TENDERS FOR IRON PIPE FOR ST. JOHN.

The St. John, N.B., Water and Sewerage Board, at a meeting held last week, received tenders for 184 tons of iron pipe. Among the tenderers were Singleton & Dunn, Glasgow ; Montreal Pipe and Foundry Co. ; United States Iron Pipe and Foundry Co., Philadelphia ; R. D. Wood & Co., Philadelphia ; Wm. Jacobs & Co., Chicago. The board decided to accept the tender of Singleton & Dunn, which was as follows : 4-in. pipe at $29.40 per ton ; 6-in., $28.22 ; 10 and 12-in., $27, with the addition of 1s. 3d. for freight, insurance and inspection, and 2 per cent. commission. It is understood that these figures include the duty, but inquiry will be made, and, if this understanding is incorrect, the tender will be reconsidered.

WATER CONDENSATION

In reply to a correspondent who is troubled with water condensation on the lead pipes of the main supply to a large organ driven by hydraulic power, which supply runs through a kitchen where there is a hot-water tank, an exchange says : "This trouble is entirely due to the warm, moist air of the kitchen coming in contact with the cold pipe. It is quite a common occurrence. The pipe should be covered with some material so that the air which reaches it will not be cooled. Hair felt will do, but it may look untidy. A double thickness of felt carpet will do, or a wooden cover packed with felt. On some passenger vessels where the iron joists across the saloon ceilings dripped with condense water a perfect remedy was found in first varnishing them, then sprinkling them thickly with cork in a coarse powder, and finally painting over this. The American Radiator Co.'s new catalogue shows a sectional pipe-covering which looks neat."

BUILDING NOTES.

BUILDING Inspector Chausse expects that over $5,000,000 will be spent in building operations in Montreal this year. Among the larger expenditures will be $1,000,000 for the C.P.R. shops ; $250,000 for the new Notre Dame Hospital ; $100,000 for the Polytechnic School; $250,000 for the new Corn Exchange ; $150,000 for the Imperial Bank building ; $350,000 for additions to the Bank of Montreal ; $250,000 for another elevator for the G.T.R.

Two new elevators are to be erected in Regina, N.W.T.

Moir, Son & Co., Halifax, have suffered heavy loss by fire. They carried $60,000 insurance and will rebuild.

Port Arthur, Ont., Board of Trade building was destroyed by fire on Saturday. The loss was about $6,000.

H. C. Stone, architect, Montreal, has prepared plans for a five-storey factory for The Hudson Bay Knitting Co., on Lagauchitiere.

Notwithstanding the stiffening in the lumber market, a building boom is anticipated in Ottawa throughout the coming year.

H. Radford will erect a $10,000 warehouse near the building to be put up by The Great-West Saddlery Co. on Market street, Winnipeg.

Hutchinson & Woods, architects, Montreal, have prepared plans for three additional storeys to L. Graedinger, Sons & Co.'s premises, St. Peter St., Montreal.

The Dominion Paving and Construction Co., Toronto, have acquired a lot in Vancouver on which they will erect a $10,000 factory for the manufaeture of carbolite and carbolineum, wood preservatives.

Alderman Sharp, of Winnipeg, says that a company is being formed in that city to manufacture artificial stone from sand or gravel and cement. He himself is going to have a $20,000 building constructed of this material.

Architect Griffith, Winnipeg, has prepared plans for a five-storey hotel of modern design for Mr. Wilks on McDermott street, Winnipeg ; for a 20-bedroom boarding-house for Mr. Campbell on Smith street ; for a new Methodist church

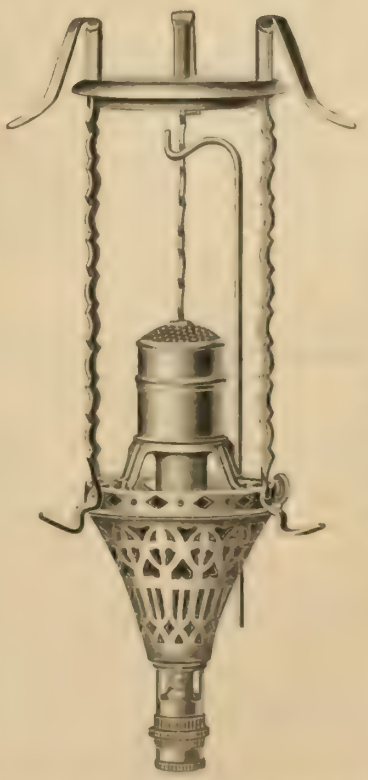
AUER LIGHT CO., - - MONTREAL.

No Black Mantles

WITH THIS BURNER



The only perfect gas burner yet made.

Has adjustable Bunsen to suit any gas burner.

Works equally well with Natural Gas—Artificial or Gasoline Gas.

If your gas lights give you trouble, this Burner will relieve all trouble and give the most perfect light.

Price 35c. each,

for either post or gallery burner.

A well-assorted stock of Oil Lamps always on hand.

THE ROCHESTER LAMP CO., of CANADA

at Carberry, Man.; for an $8,000 house for Mr. Bargen, Plum Coulee.

Architect Chesterton, Winnipeg, has completed plans for a Normal school at Manitou, Man.; for an Anglican church in the same town, and for a warehouse for The J. I. Case Co. at Regina, which will be 100x148 ft., frame building, metal clad.

The Adams Wagon Works, Brantford, Ont., are so busy that a larger factory is talked of. It is estimated that about 25 or 30 additional hands will be employed. No plans for the extension have yet been drawn up, says John Sanderson, of the company.

H. Simpson, architect, Toronto, has prepared plans for a $50,000 furniture store and warehouse for J. F. Brown, which is to be erected opposite Eaton's on Yonge street. It will be five storeys high and will be built of structural steel throughout.

Architect S. Hooper, Winnipeg, is preparing plans for the new Land Titles office, which is to have marble wainscotting and tile floors. The building will be fireproof and contain 12 large vaults. He is also preparing plans for a four-storey 50x75 ft. office building on the corner of Ross and Princess streets for N. Bawlf.

THE STANDARD IDEAL SANITARY COMPANY.

The new factory which The Standard Ideal Sanitary Plumbing Co. are erecting in Port Hope, Ont., is progressing steadily. The factory is a large and well-constructed one, but the company have decided that it is not quite big enough for their purposes, and so are having plans prepared for an addition which will be 93x45 ft. in size.

This new company are conducting the business with an energy and spirit which is eminently pleasing and which will win for them the best opinion of the trade.

AN AUSTRALASIAN COMMENT.

THE happy relations that exist between employers and employes in Canadian plumbing establishments is a matter for congratulation. The following comment by The Australasian Hardwareman on a typical incident, reported some weeks ago, is interesting: "A pleasing incident is related in connection with a large plumbing establishment in Ottawa, Canada. At the marriage of one of the principals of the firm a presentation of a very handsome secretaire was made by the foreman, on behalf of the numerous artisans employed. The appreciative kindness shown by the firm to their employes was alluded to in making the presentation. In accepting the present the recipient ascribed much of the success of the business to the happy relationship existing in the establishment. He always kept his employes' interests in mind, and was glad to know that they appreciated the fact. This spontaneous co-operation between employer and employe is a feature of American and Canadian trade and manufacture, and is doubtless a great factor in producing the success characteristic of these countries."

PLUMBERS' BANQUET IN HAMILTON

On Monday evening the Hamilton Master Plumbers' Association held their annual banquet at the Waldorf hotel, when, in addition to about 60 members of the craft, they entertained about a dozen or so visitors from Toronto, including A. Purdy, W. Mansell and W. Meredith, representing the Toronto association.

Geo. Stevenson, president of the Hamilton association, occupied the chair, performing his duties with tact and skill.

After an excellent dinner the following toast list was honored, most of the speeches being bright, interesting, and thoroughly appreciated:

King and Country—Responded to by singing of the National Anthem

City Council—Responded to by Ald. H. S. Wallace and W. M. Findlay.

National and Provincial Associations—Responded to by W. Meredith.

Toronto Plumbers' Association—Responded to by W. Mansell.

Board of Health—Responded to by J. S. Boothman and S. Howard.

Manufacturers—Responded to by Messrs. Patterson, Travis and McNichol.

Plumbers' Supplies—Responded to by Messrs. Somerville and Armstrong.

Journeymen Plumbers—Responded to by Webb Harris.

The Ladies—Responded to by Mr. Huffman and W. Meredith.

During the evening, A. Rodgers, on behalf of the local association, presented a handsome pipe to W. J. Clark, retiring secretary.

In addition to the speeches some excellent music and recitations were given. The affair was in every way a success, a credit to the Hamilton association.

TO REPAIR CAST IRON SINKS.

Householders are often wedded to their kitchen sink, or object to the woodwork, etc., being disturbed in order to replace the sink with a new one, says The Australasian, Hardwareman. The plumber can meet their wishes in these cases, and repair cracked cast-iron sinks by adopting the following method: Apply a mixture of glycerine and litharge, of the consistency of cream, to both sides of the split, heating up the cast-iron with a lamp until the litharge has hardened. Duplicate this treatment, and a very effectual result will follow. So treated, the sink will stand the test of hot and cold water for many years to come.

PLUMBING AND HEATING NOTES.

R. F. Elliott, of Elliott Bros., Kingston, was in Toronto and London, Ont., this week.

The Goderich, Ont., Organ Co. are making capital progress with their large new factory.

Mashinter & Co., Toronto, have the contract for plumbing and hot-water heating a house in Rosedale for A. S Rogers.

FINANCE AND INSURANCE

THE day has gone by when Canadian financial, insurance and banking institutions confined their operations to the limits of the Dominion. During the past couple of years the tendency to expand and to invade other countries has become quite marked. Some of our banks have now branches in different parts of the United States and in the West Indies. Our insurance companies have followed suit. Among the latest of the latter class to invade the United States is the Manufacturers' Life Insurance Co., of Toronto. It is now arranging to establish a branch in Michigan, and a deposit of $100,000 in bonds of the Michigan Central Railway Co. has been made by that company with the State Treasurer as a preliminary step to doing business there.

* * *

During the last session of the Dominion House of Commons it will be remembered that the C.P.R. obtained authority to increase its capital by $20,000,000 in order to procure funds for improving its system. Large as this sum was, it is proposed by the Pennsylvania Railroad Co. to expend an amount far in excess of this figure. The sum it proposes to expend is $67,000,000 on its line east of Pittsburg.

* * *

It is asserted that some of the steel manufacturers in the United States have succeeded in turning out a steel tie for railroads at a price which will allow of its general use. Of course, this is something that has long been desired, and if the present efforts are as successful as claimed, it should, no doubt, appreciate the value of the steel stocks on the markets. It is estimated that in the United States alone about $10,000,000 per year would be expended on steel ties if they come into general use.

* * *

The annual report of the Merchants' Fire Insurance Co. showed a most gratifying condition of the company's affairs. The gross pemium income was $55,725.31, and the number of policies in force, 7,896.

* * *

The coming of age of The Toronto General Trusts Corporation, which was established in 1882 by the present managing director, J. W. Langmuir, was marked by the submission to the shareholders at the annual meeting on February 25 of a financial statement of the year 1902, indicating continued prosperity and increasing confidence in this pioneer amongst Canadian corporations which undertake the duties of a trustee. The profits of the year's operations of the company under consideration, while of a very satisfactory charactor to the shareholders, bear a very moderate ratio to the $20,000,000 of estates in its care.

* * *

During the year 1902 the deposits with The Canada Permanent and Western Canada Mortgage Corporation increased $176,610.71, while the amount invested in its currency bonds increased $395,619.32. Thus, the amount of Canadian funds for which this company has afforded a safe and profitable investment has increased in one year by the large sum of $572,430. Following as it does similar large increases in previous years, this may be taken as another indication of the remarkable prosperity our Canadian people are enjoying. We say "Canadian" people, because neither its depositors nor bondholders are confined to the city of Toronto, but are to be found in every Province and Territory of the Dominion. It also clearly indicates the confidence which all classes of the people have in the Canada Permanent, a trust which is well merited, as it is based upon a solid foundation of capital, reserve fund and assets. Its paid-up capital of $6,000,000 is equalled by only three of our largest banks. Its depositors, either in Toronto or elsewhere, are afforded every customary facility. Accounts may be opened and money deposited and withdrawn by mail without any inconvenience. Its bonds are a legal investment for trust funds.

* * *

In their weekly letter of February 27 Amelius Jarvis & Co., Toronto, say, in part, as follows, regarding the local stock market as far as banks are concerned:

> The public here have also shown considerable attention to certain bank stocks. Dominion Bank has advanced several points. We have not been able to obtain reliable information as to the cause of its sudden rise. A bonus is hinted at, but no official information can be obtained. Bank of Ottawa sold yesterday at 220, closing with a bid at that price, none being offered under 223. This is, of course, ex-allotment, and is high-water mark for the stock. At the risk of repitition we would say that we believe this stock is not as high as it deserves to be when one considers the splendid condition of the finances of the bank. The stock of the Bank of Commerce has always been selected by us as an excellent investment for our clients. We have also felt that, besides a fair return upon their money, considering the security afforded, they have, in addition, a very good chance of substantial increase in the price. Within the last few days there has been heavy buying of the stock. Under its influence the price advanced sharply, sales taking place yesterday at 168½, the stock closing with 168½ bid, 169 asked; while this morning the price advanced still further, the stock selling at 170. This bank has for some years shown a policy successfully combining sound business methods with great progressiveness. A short time ago they absorbed the Bank of British Columbia, which had a very strong hold upon the business of British Columbia. There is still a portion of Canada where the bank is practically unrepresented, that is the Maritime Provinces. Yesterday an announcement was made of an increase of the capital of the bank from $8,000,000 to $10,000,000.

* * *

The bank of Toronto will shortly open three new branches in Toronto and Montreal. One at the corner of Queen and Spadina avenue, Toronto, as soon as their new building at that prominent corner is completed, and one at the corner of St. Catherine and Guy streets, Montreal. The office is in the Board of Trade Building, Montreal, to which reference was made in our last issue. This bank is giving public notice of its intention to apply to the Treasury Department for authority to increase its authorized capital from $3,000,000 to $4,000,000.

* * *

FINANCIAL AND INSURANCE NOTES.

The Royal Bank will shortly open branches at Pembroke and Prescott.

A new branch of the Merchants' Bank of Canada has been opened at Olds, Alberta.

H. H. Beck has been reappointed managing director of The Manitoba Insurance Co.

E. R. Blanchard, cashier of the Bank of St. Hyacinthe, Que., died suddenly on February 15 of hemmorrhage of the brain.

Herbert Fox, accountant of the local branch of the Standard Bank, Kingston, is joining the staff of the head office in Toronto.

The clearing house of Winnipeg was established in 1893, and the first full year's clearing was $50,311,000. This increased to $188,370,000 in 1902.

Toronto Hardwaremen Enjoy Themselves.

The Hardware Section of The Retail Merchants' Association Entertain Their Friends.

UNITY and co-operation are two characteristics that have tended to make the hardware section of the Retail Merchants' Association of Canada an influential factor in hardware retailing throughout Ontario. These qualities, together with an enjoyable feeling of good fellowship, predominated at the oyster supper given by this organization on Wednesday evening. The representative character of the 75 or so representatives of hardware manufacturers, wholesalers and retailers present may be judged from the following list of those present:

Edwin R Rogers, chairman. T G Dexter, H S Howland, Sons & Co., Limited; G W Collins, The Collins Mfg Co; H T Eagen, Wood, Vallance & Co., Toronto and Hamilton; H C Clucas, Canada Paint Co; John Caslor; 628 Queen street west; A B Caswell, HARDWARE AND METAL; G Monkhouse, Canada Paint Co; C F Moorhouse, 220 Queen street east; J E R Ade and T B Williamson, H. S Howland, Sons & Co., Limited; Samuel Hobbs, 1434 Queen street west; J. Nicholson, 203 Palmerston avenue; F. G Sharpe, Consolidated Plate Glass Co., Limited; Frank H. Till, Toronto Plate Glass Co; James Shaw, Pilkington Bros, Limited; Edwin Hill, ptnr., Toronto Plate Glass Co; S. J. Thompson, H F Dew and Walter H Turner, Rice Lewis & Son; Earnest M Caslor, 628 Queen street west; W J Sheppard, R T Miller and Thos P Padgett, Toronto Junction; Jas F Smyth, United Factories, Limited; George Nicholson, M & L Samuel, Benjamin & Co., W C McFarland, 391 Parliament street; George Large, 124 Queen street east; James Cole, Parliament street; Richard Jones, Bracondale; T. Taylor, Yonge street; G B Lara, Bloor street west; B. Sherman, Richmond street west; H. J McAdie, Sanderson Pearcy & Co; Fred E Ellis, Albert Welch; J W Shorney, Toronto Lead & Color Co; Walter J Bolus, The W J Bolus Co; W H Allison, The Canada Paint Co; E W Hickson and G M Binns, Kemp Mfg. Co.; George Matthewson, 744 Queen street east; J. A. Mathewson, 319 Yonge street; F W Shorney, Toronto Lead and Color Co.; Harry Holland, Imperial Varnish & Color Co.; Harry J. Page, Assessment Dept. City Hall; E. T. Dean, Stewart & Wood; E Martin, Wm Batters and W J Hallarn, Gurney Foundry Co., W J Good and F E. Paddon, Canada Paint Co.; H. Henderson, Toronto Lead & Color Co.; A. E. Henry, Kemp Mfg Co., Geo H Smith, Rice Lewis & Son; Jno. D. Laidlaw, McClary Mfg Co., S H Cutts, Rice Lewis & Son; J. E. Bennett, Rogers Hardware Co.; J. S. Wood, T. Eaton Co., S J Greer, Harry Marks, Lyons & Marks; John Willmot, president, Retail Merchants' Association; George J St Leger, executive, Retail Merchants Association; D O. McKinnon HARDWARE AND METAL; Richard W Crashley, The Jas Robertson Co., Limited; George Pearsall, 417 Yonge street; Max Morell, Lewis Bros & Co., Montreal; A D Smith, R P Crashley E Lawrence, M W Shepherd, H S Dawson, J W Peacock, E M Trowern, general secretary

After the oysters and other viands had been enjoyed by the company, Chairman Rogers, on behalf of the Association, expressed his pleasure in welcoming so many representative hardwaremen to this, the most festive meeting the body had yet held. He hoped that from the enthusiasm gathered at this meeting, they would be able to look forward to a large increase in the interest taken in the work of the Association, the aim of which was to benefit all its members without doing any injury to other branches of the hardware trade.

The opening toast, "The King," was enthusiastically responded to with musical honors. "Canada," was next proposed by Chairman Rogers, in a few warm, patriotic words. He called on J. St. Ledger for the response. Mr. St. Leger, after a brief reference to the magnitude of Canada, expressed the conviction that although Canada had magnitude and natural wealth, these were not her greatest assets, as she had within her bounds the greatest possession that any country could have, viz., men of high purpose, noble thought and patriotic motives. In view of the large number of young men present, Mr. St. Leger felt impelled to emphasize the fact that in Canada, as in all other countries, the young man who is going to succeed is bound to be the one who takes an interest in his work, who is inspired by the ambition to produce the best article, to do the best work possible, to be honest before God and square before his fellowmen. He was proud that Canada possessed such a large proportion of such men.

"The Hardware Manufacturers" was the next toast. Chairman Rogers, after a few complimentary references to the progressive spirit of Canadian manufacturers, called on G. M. Collins, H. Clucas, James Shaw and G. M. Binns, W. J. Hallarn and Wm. Batters for the responses. The first four first-mentioned gentlemen expressed their delight at being present and their goodwill toward the retailers represented by the Association. Their speeches were all brief, however, being in each case the maiden speech of the giver.

Mr. Hallarn, known to the trade as "Gurney's general jollier," had been a retailer himself and, though now representing a manufacturing house, felt he could make a suggestion out of his own experience. "If," said he, "the retail hardwaremen paid as much attention to their prices as the manufacturers do to theirs; if they conducted their business along their own lines without paying attention to what neighboring rivals were doing, and if they got together regularly at meetings of the Association, they would have more comfort, more pleasure and more profit in their business." He felt that there was not a manufacturer in Canada who did not desire the welfare of the retail trade.

In proposing the toast to the "Wholesale Hardware Association." Mr. Rogers pointed out that while some retailers believed that the wholesale dealer was not a necessary factor in business life to day it was a fact that the Toronto hardware retailers and their Association had no better friends than the wholesale houses throughout the country. He called on T. G. Dexter, of H. S. Howland, Sons & Co., Limited, Toronto, and H. T. Eager, of Wood Vallance & Co., to respond to this toast.

Mr. Dexter expressed his regret that the president of his company, Peleg Howland, was unable to be present. He felt that between the two bodies, the wholesalers and retailers, there should be a cordial bond of sympathy. This bond would be increased as the retailers' organization grew in strength. As a member of the Wholesale Hardware Association, he had learned the value of such an organization, which made it possible to bring pressure on its own members and on the manufacturers to keep prices at a basis that would give all, at least, a living margin on goods handled. He was sorry that the retailers had not found it as easy to perfect their organization as it should be. The retailers must come together and know each other better if they are to get the best results out of their business.

Mr. Eager had been interested in associational work for some time and was convinced that if the hardwaremen would keep together and work for more power, not only in Toronto and Hamilton, but throughout Ontario, their influence would soon become a great power for good throughout the Province.

"The Retail Merchants' Association of Canada" was proposed by Vice Chairman John Caslor and responded to by J. Willmot, president of the Toronto branch, and General Secretary E. M. Trowern. Mr. Willmot's address was an enthusiastic peroration on the value of organization. There had never been a time in history, he believed, when there was more reason for retail merchants getting together to protect their own and their customers' interests, than now. He referred to the fight against trading stamps as an instance of what unity and organization could accomplish.

Mr. Trowern felt that the speeches of the evening had demonstrated to all the necessity of a stronger organization for the retailers. The representatives of the wholesalers and manufacturers had shown their willingness to unite in any good cause with the retailers, so, if the latter got together, a grand work could be done. The hardware section of the Association had been started in a very small way only a few years ago, yet, had slowly, but gradually grown in strength and vigor until it had become a power in the land. He requested the assistance of travellers in convincing retailers who were not members of the Association that such an organization would be to their advantage.

The toast, "Commercial Travellers and Warehousemen," was proposed by George Pearsall, who claimed to be the oldest hardware dealer in Toronto, having been

Canadian Representative: **ALEXANDER GIBB**, 13 St. John St., MONTREAL.

75 YEARS. *ESTABLISHED 1825.* *75 YEARS*

at the trade 25 years. He called for responses from Messrs F. Smythe, Max Morris, [illegible] and T. B. Williamson. All of these gentlemen claim that the "Knights of the Grip" were the most sociable race of man extant; that they loved their neighbors with an undying love and that each one of them represented the largest house of its kind either in Canada, America or under the British flag. All of their speeches were warmly received, showing the happy relations existing between Toronto travellers and retailers.

"The Retail Hardware Section" was proposed by D. O. McKinnon, associate editor of "Hardware and Metal," who, on referring to the great possibilities of such an organization, suggested that the greatest good to all branches of the hardware business would be obtained when manufacturers, jobbers and retailers had their respective organizations, yet combined together for the good of all. He suggested that enthusiasm in such work could best be sustained by a publication in the trade press of full reports of all meetings held, as what was of importance in Toronto, Hamilton, Brantford or London, would, as a rule, be of interest to hardware dealers throughout the Province. The trading stamp light was an instance of this. He called on Samuel Hobbs, John Caslor, W. C. McFarland, S. J. Greer and M. W. Shephard.

Mr. Hobbs said he was not a speaker, yet he had received such enthusiasm and so many good ideas that he could not fail to express his pleasure in being a member of the Association and present at the gathering.

Mr. Greer said it took the starch out of him to make a speech, but he felt that he owed it to the Association to confess that at one time he had been an opponent of the organization. He had, however, been converted and had not missed a meeting since his first. He felt everybody could receive the same inspiration from the meetings that he had.

Mr. Caslor claimed to be the father of the Association. He had long been convinced that more money could be made by every member of the trade and more satisfaction obtained from business if there were less petty jealousy and more unity of action among members. He felt that his opinions had been more than justified by the success of the organization, which he and the late Mr. Unitt had promoted. When they started they had but 16 members. Now they had 75.

Mr. Shepherd had had a happy time and he could see no reason why his competitors should not always make things pleasant for him, and why the representatives of his creditors, the jobbers and manufacturers, should not also assist in making him happy.

Mr. McFarland, while not an orator, was enthusiastic in his praise of the value of the Association, and wished every hardwareman in the city and throughout the Province might recognize the influence for good in their lives such an organization might be.

The next toast, "The Ladies," was responded to by three of the best-looking bachelors present: A. E. Henry, John D. Laidlay and J. B. Reade. Needless to say the tributes the fair sex received from such gallants were of the most enthusiastic nature.

In proposing the final toast, "The Press," Chairman Rogers said that there were many levers in business life, but the greatest and probably the most useful was the "Press." A. B. Caswell, advertising representative, and D. O. McKinnon, associate editor, "Hardware and Metal," responded briefly.

An impromptu toast, which, however, proved to be one of the most acceptable of the evening, was proposed by E. T. Lean, who asked all to join with him in toasting the chairman of the evening, whose tact and skill had contributed so largely to the enjoyment of all.

Interspersed during the programme several musical selections were given by Messrs Bennet and Martin, entertainers. These were so thoroughly appreciated that encores were called in every case. At the completion of the toast list Chairman Rogers called on all to join hands and sing "Auld Lang Syne," which concluded what was probably the most successful and enjoyable meeting yet held by the hardware trade of Toronto.

FIRE AND BURGLAR-PROOF SHIELD.

A new, novel and effective device for the protection of wealth from fire or burglars is soon to be introduced to the public. The idea consists of a shield of nickel steel, with double, hollow walls filled with liquid which cannot be penetrated without disaster to the operator. In case of attempted penetration, the liquid contents, subject to high pressure, would mean death, sure and swift, to the burglar. The door will be operated automatically, on the hydraulic system, from within the shield itself, and when closed forms part of the shield proper, presenting an unbroken surface on all sides to any who may have evil designs on the contents of the safe or vault in the interior. The device can be made any size, suited to any kind of vault or safe. The patent applied for is controlled by G. A. Stanley and J. M. Ross, the inventor, of Lucan, Ont.

OLD HARDWARE FIRM DISSOLVED.

The old reliable hardware, established by John Rae in 1874, passed out of existence last week, Mr. Rae having sold out to L. I. Hunt & Son, who take immediate possession. General regret is felt because Mr. Rae found it necessary to take this step. He is one of our oldest merchants, and during his long business career amongst us he has always proven himself to be a straight-forward, big-hearted gentleman. Mr. Rae and his estimable family will continue residents of our town.—Forest, Ont., Free Press.

Apollo galvanized iron commands more money and shorter credit—at wholesale—than any other—but saves the worker money.

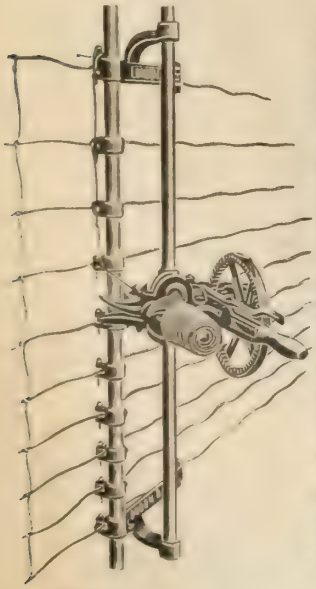
A FACT SAYS WEBSTER, "IS THAT WHICH IS REALITY,"



It is a fact that it costs more for labor to weave wire fences in the factory and stretch it afterwards than to do it in the field with a LONDON.

It is a fact that heavier, stronger and better built fences are being built all over this country with LONDON FENCE MACHINES.

It is a fact that there is as much profit to the dealer in selling LONDON MACHINES and COILED WIRE as in roll fencing.

The extra cost of roll fence is in the factory; the trouble with it is in erecting. It can't be done perfectly.

Sell your farmer friends a LONDON. It will build a perfect fence and win their approval every time.

Write for prices.

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, MAROH 14, 1903. NO. II.

COMMENT ON CURRENT TOPICS.

IN Manitoba last year, 168 joint-stock companies filed reports in the Provincial Secretary's Department, against 111 in 1901. Of foreign corporations there were 75 against 57. Manitoba will eventually become a great manufacturing and commercial centre as well as a great wheat-growing country. And those who prophesy that Winnipeg will be the "Chicago of Canada" are not likely to prove false prophets.

* * *

A couple of generations ago Toronto was called "Muddy York." To-day it is called "Muddy Toronto."

* * *

In making a raid on cotton in New York the other day, the bears were possibly bent on providing themselves with garments for summer wear.

* * *

Electricians appear to be getting control of the atmosphere, but there are yet no signs of anyone mastering the turbulent waves of the ocean. The way the big ocean liners have been buffetted about lately forcibly reminds one of this.

* * *

It is a good thing to have an encyclopedia in your library, but you require something more than an encyclopedia in your head; you require a thinker.

* * *

The agitation for smoke consumers is becoming quite pronounced in Toronto. This is one of the aftermaths of the coal strike, for had there been more anthracite there would have been less bituminous coal used, and consequently less smoke to cause annoyance.

* * *

It does not follow that because Vermont has discarded its 50 years of prohibition for a high license system, the surplus supply of water in that State will be any larger.

* * *

One of the political speakers in North Ontario blamed Providence for the elongated character of that constituency. This is a new species of politico-religious belief, and possibly is born of the idea that those who gerrymandered the constituency were verbally inspired.

* * *

The two locomotives which met on the same track near Acton, Ont., the other day have not since been able to move. Locomoter-taxia is probably the trouble.

* * *

Should the prohibitionists succeed in abolishing the liquor bar in Ontario we shall still have the legal bar to deprive us of our cash.

* * *

Although the Conservative party in the Ontario Legislature is still in the cool shades of the Opposition benches, it doubtless finds the temperature several degrees warmer than in the last House. The thought of what might have been, and in fact, what nearly came to being a reality, must naturally, however, be depressing. But one cannot tell an hour or a day may bring forth in political matters, although it must be confessed that the immediate future does not promise to bring defeat to the Ross Administration.

* * *

And so the Dominion Government has again decided to call for tenders for a fast Atlantic steamship line. Canada has experienced so many slips between the cup and the lip over the fast Atlantic steamship service during the past six or seven years that we sometimes almost despair of ever getting the cup to our lips; in other words, of ever getting an up-to-date line equal to that running out of New York. Let us, however, be not faithless but believing. The fast line is a little slow in coming, but it will reach harbor some day, although in the meantime some of us, like faithful Abraham, may "cross the border" before the desideratum is secured.

* * *

In the King's speech, at the opening of the Ontario Legislature, better accommodation is promised for the insane of the Province. It is to be hoped that the promise will be made good. A great deal has been done, but until there is no longer a necessity for committing to the common gaols the poor unfortunates bereft of reason a great deal more must be done.

* * *

Although the Liberal party in Ontario holds the record under the British flag for continuous tenure of office, His Majesty's Royal Opposition can boast (if it so desires) of holding the record for continuous occupancy of the Opposition benches. There may not be much consolation in this, but a record is better than nothing.

* * *

The grain crops in Canada have been so healthy the last couple of years that they have been sufficiently potent to lift heavy mortgages off many farms.

* * *

Two or three of the municipalities in Ontario appear determined to hammer away at the Bell Telephone Company. They evidently like the ding-dong sound.

* * *

Marconi has at last induced the British Government to allow his wireless telegraph station at Poedlin, Cornwall, to be connected with the inland telegraph system of the country. Hitherto the nearest telegraph station to Poedlin was about two miles away, but permission officialdom

opposed bridging the distance. But officialdom, like the ether of space, has been at last compelled to conform to Marconi's will.

* * *

There was a political meeting at Zepher, Ont., the other night and as the speeches were political they were not as the gentle zephers about which the poets write.

* * *

While C. R. Devlin is now the man for Galway, it is evident the Dominion Government no longer considers him the man for Canada as an immigration agent.

* * *

Toronto has lost its suit against The Consumers' Gas Co., and now the legal gentlemen who had charge of the case are busy explaining that they expected the city would lose its case.

* * *

A meeting was held in London, Eng., a few days ago to discuss the food supply in case of war. What is troubling Canada most just now is how to supply Great Britain with food in time of peace. We have the surplus food, but not the adequate transportation facilities.

EMPLOYES ENJOYED A DANCE.

The McClary Manufacturing Co., Limited, London, Ont., celebrated the opening of the warehouse erected to replace the one recently destroyed by fire with a dance for the employes in the immense third flat of the new building, where there is a floor space of 200 x 60 ft. The flat is floored with hardwood, which was excellently waxed. The room was well illuminated and nicely decorated, and when the dancing was in full swing the sight was one of grace and charm. Like everything else undertaken by this company, the affair was a complete success.

NEW HARDWARE FIRM.

Moore Bros., hardware, stove and tinware dealers, Georgetown, Ont., have disposed of their business to Anthony & Howes. Mr. Anthony is an old Georgetown boy, having spent his school-boy days in the town. From here he went to Brampton, where he spent some years in the employ of Peaker & Son, and latterly he has been enaged in Wiarton. Mr. Howes is a brother-in-law of Mr. Anthony, and has had some years experience in the business. Stock-taking is now in progress. The firm will be ready for business in a few days, and cordially solicit a liberal share of your patronage.

THE BINDER TWINE TARIFF.

Editor "Hardware and Metal":—An article appeared in The Mail and Empire of January 8, 1898, announcing the fact that a deputation from the cordage manufacturers had waited on the Government at Ottawa on January 7 to insist upon the duty on binder twine being restored.

It was represented to the members of the Government, in the strongest possible way, that absolutely nothing short of immediate liquidation awaited the oldest, largest and most important cordage factory in Canada, unless the tariff was increased. Figures were piled up in an astonishing way to prove the correctness of their contention. The article in question was severely criticised by those opposing the reimposing of the duty. It was shown by them that the figures were not only padded, but an attempt had evidently been made to deceive the Government with grossly exaggerated statements.

The facts brought out were of a most startling nature. They undertook to show that a huge combine was in existence, claiming that this combine had agreed to subsidize or purchase all the cordage factories they could get hold of, enormous prices being paid for the factories bought, and princely salaries paid to the others to close down, the evidence proceeded to establish these facts; it was so conclusive that no attempt was made to disprove it.

The duty was not restored—the oldest, largest and most important cordage factory kept right on doing business in the old way; not only that, but new twine factories have been organized, and are in operation to-day in spite of the statement made by the cordage company that they would have to go into liquidation, if the traiff was not reinstated. Not only has there been six new factories started in Canada since the duty was taken off, viz.: Walkerton Binder Twine Co.; The Ontario Farmers' Cordage Co., of Brantford; The Richelieu Cordage Co.; The Chatham Binder Twine Co.; The Canadian Cordage Co., of Peterboro', and The Brandon Binder Twine Co., but the old ones still exist. The formation of these companies is evidently due to the enormous profits made by some of them, as shown by their statements, showing 60, 90 and 100 per cent. per annum, or an average of 83 per cent. during the years 1896, 1898 and 1900; and now we find the same element at work to induce the Government to put on the duty. Meetings of the manufacturers have been held. Deputations have been sent to Ottawa to interview the Government, waxing eloquent, no doubt, as some of them repeated the same old tale of woe that was poured into the ears of the Cabinet Ministers, when a similar deputation waited on the Government on January 7, 1898, a full report of which was given at the time in The Mail and Empire of January 8, 1898. They are doing all they can to induce the Government to help them to take some more money out of the pockets of the farmers of this country, by putting a duty on binder twine. Padded statements have been presented as formerly. A sensational writer has been engaged to write it up. A circular, under the heading of "The Binder Twine Situation in Canada," of which some 40,000 have been circulated broadcast over Ontario, filled with the same old mis-statements, and grossly exaggerated, the following being a sample:

The first proposition starts off with a mis-statement intended to deceive. They state that binder twine is manufactured principally from manila fibre, on which there is an export duty of ⅜ of a cent. per lb. coming to Canada. Now, what are the facts? From 85 to 90 per cent. of the binder twine made, used and sold in the United States and Canada is made from sisal fibre, on which there is no duty. They state that over 90 per cent. of the binder twine manufactured in the United States is made by the large agricultural implement companies. Outside of the two large agricultural companies, who manufacture twine, there are some ten or twelve makers of twine in the States, and it is estimated that they make from 40 to 50 per cent. of the twine manufactured in the States.

They assert, that while there is no duty on twine coming into Canada, there is a duty of 45 per cent. on twine entering the States. This statement is intended to deceive or mislead. There is no duty on sisal or twine running 600 ft. to the lb. going into the States from Canada. There is a duty of 45 per cent. on twine running 650 ft. to the lb., but there is so little of this length of twine made, and the Canadian 650-ft. twine is so inferior in quality, it would not be sold in the States, even if there were no duty on it.

Sisal fibre is grown in Mexico and is free of duty. The Canadian maker can

WIRE NAILS
TACKS
WIRE

Prompt Shipmen

The ONTARIO TACK CO.
Limited
HAMILTON, ONT.

buy as cheaply as the American maker, and as fully 85 to 90 per cent. of all binder twine made is manufactured from sisal fibre, and as sisal-fibre twines are admitted to the United States from Canada free of duty, the American manufacturer has no advantage over the Canadian manufacturer.

They state that the American harvest is earlier than the Canadian, and the American makers are only too glad to dispose of their surplus twine at any figure. The harvest in Ontario and Quebec comes at the same time as it does in the Central West, Manitoba is only a little later than Minnesota and North Dakota, and as the American cordage manufacturers export thousands of tons of twine every year to Europe and other countries, where the harvests are either later or earlier than in America, there is a continual demand for it, consequently they have no "surplus twine to offer at any figure."

In letters of red they ask the question, What will be the result if the Canadian Government do not give the Canadian manufacturers some protection? and answer it with the same stock argument used in 1898: The factories must close and binder twine will cease to be manufactured in Canada, just what they tried to make members of the Government believe in 1898. Strange that they would try to hoodwink the Government in this way, knowing that all the twine factories that were then in existence are still in operation now, and no less than six new twine factories have been organized since then and are now running.

Their contention that hemp for the manufacture of binder twine has to be purchased in August and September is wide off the mark.

It is perfect nonsense to talk of purchasing all the hemp for next season's harvest during these two months, for, as already intimated, nearly all twine used is of sisal hemp. It is raised in Mexico, and a sailing vessel will make the trip to New York in about eight days.

H. T.

Toronto, March 11, 1903.

PROMINENT SADDLERY MAKER DEAD.

S. C. Skinner, of The Skinner Company, Limited, Gananoque, Ont., died in that town on Saturday last. Deceased had been in business in Gananoque since 1857, when he entered into partnership with his father and brother in the manufacture of hames, scythes, snaths and saddlery hardware, which business has widely extended in the years that have gone. Mr. Skinner was one of the leading citizens of Gananoque, and was highly esteemed by all who knew him.

Absolutely Trustworthy.

A VARNISH STAIN THAT IS ALWAYS RIGHT . . .

The Sherwin-Williams Varnish Stain is a specialty you can rely on. It is a leader and a trade getter. Practical tests and the market it has found prove this.

It is a product that is always in demand. There is no particular season for selling it. It is constantly being used for decorative purposes.

Your customers will find The Sherwin-Williams Varnish Stain always right, and it will be a continuous advertisement for your paint business.

The Sherwin-Williams Varnish Stain stains and varnishes new and old wood at one operation. It imitates the natural wood and gives a good lustre. It is serviceable and decorative. Put up in convenient sized packages, ready for use in oak, cherry, mahogany, rosewood, ebony, walnut, golden oak and green.

If you haven't our product in stock, write for prices and full particulars. Some good advertising features go with it. Write to-day.

CHAT

FORT WILLIAM is to have another large grain elevator. The contract to build a 2,000,000-bushel elevator has been granted to the MacDonald Engineering Co. by the C.P.R.

The C.P.R. and G.T.R. have announced their intention of opening up offices in Bristol, Eng.

J. G. James, of London, Ont., has purchased the hardware business of J. G. Ryan, Port Dover, Ont.

J. C. Wanless, hardware dealer, Chatham, Ont., is having his store overhauled and remodelled. When completed, it will be one of the brightest and most convenient in Chatham.

James Corbett, one of the founders of The Corbett Foundry and Machine Shops, Owen Sound, died in that place on Wednesday last after a lingering illness. His sons continue the business.

Thos. B. Macdonald, of Park Hill, Ont., who has been spending the last five months in California, will, on his return this month, open a new, up-to-date, stock of hardware, stoves and tinware.

Fire broke out in the hardware store of W. J. Muirhead, Carleton Place, Ont., last week. Timely assistance was given by the local fire brigade. The building was saved, though much damage was done to the stock.

Fred. J. Prossons, son of R. Prossons, of Ashdown & Prossons, Swan River, Man., has left the J. H. Ashdown Hardware Co., Winnipeg, and entered the employ of Geo. D. Wood & Co., Winnipeg, as warehouse clerk. H. W. Gibson, for the last six years representative of the J. H. Ashdown Hardware Co., has joined the travelling staff of Geo. D. Wood & Co.

BUSINESS CHANGES.

DEEDS OF TRUSTS, ASSIGNMENTS, COMPROMISES

A meeting of the creditors of Lamb[illegible] & Ellis, contractors, Montreal, was held on March 9.

A statement of assignment has been filed in the case of Carrier & Co., contractors, Montreal.

John Dupont, tinware merchant, Ayton, Ont., has assigned to Robert H. Fortune.

J. Maguire & Co., general merchants, of [illegible], Ont., have assigned to Daniel Dayes.

[illegible] & Caron are provisional guardians for A. Lavallee & Co., contractors, Montreal.

Thos. O'Leary, general merchant, of [illegible], Que., is offering to compromise at 25c. on the dollar.

Willson & Ingram, agricultural implement merchants, Sintaluta, Man., have assigned to J. F. Middlemiss.

T. Fournier, general merchant and tinsmith, Cedar Hill, Que., is offering to compromise at 30c. on the dollar cash.

INCORPORATIONS AND CHANGES.

The Standard Paper Box Co., Montreal, have obtained a charter.

Ulric Beaulieu, tinsmith, of Berthier, Que., has removed to Sorel.

J. Leonce Valois, tinsmith, of Berthier, Que., has removed to Sorel.

John Galipeau & Co., Montreal, have been registered as plumbers.

The Manitoba Iron Works, Limited, of Winnipeg, have been incorporated.

George Rambo, tinsmith, Merlin, Ont., has been succeeded by Rambo Bros.

L. C. Carstedt, tinsmith, Elmwood, Ont., has removed to Moorefield.

The Manitoba Linseed Oil and Paint Co., Winnipeg, is applying for incorporation.

The Belmore Bay Gold Mining Co., Limited, Sault Ste. Marie, Ont., have obtained a charter.

R. C. Jamieson & Co., Limited, Montreal, manufacturers of paints, have been incorporated.

Sandford Furniture and Woodenware, Limited, Fenelon Falls, Ont., have obtained a charter.

The Norwich Broom and Brush Company, Limited, Norwich, Ont., have obtained a charter.

J. & P. Schwartz, lumber and grain merchants, Altona, Man., are adding implements to their stock.

C. B. McCallum, agricultural implements, Innisfail, has been succeeded by The McCallum & Thorne Co., Limited.

A co-partnership between John R. Francis, of the firm of J. R. Francis & Co., hardware merchants and undertakers, Sydney Mines, N.S., and Philomene Bernard has been registered.

SALES MADE AND PENDING.

W. N. Buck, general merchant, of Port Rowen, Ont., has sold out.

A. S. Baker, general merchant, Hilton, is advertising his business for sale.

W. Esau & Co., general merchants, of Winkler, have sold out to M. Calop.

C. B. Frelford, general merchant, Tara, Ont., is offering his business for sale.

C. Parker, grocer and hardware merchant, Smith's Falls, Ont., is selling out.

Wm. Bone, painter, Hutonburg, Ont., has sold his stock at 71½c. on the dollar.

Nesbitt Bros., general merchants, Wellwood, are advertising their business for sale.

AN UNDISPUTED FACT.

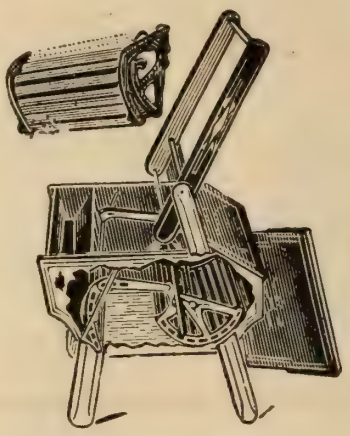
are absolutely safe; accidental discharge impossible. Millions are in use, all giving perfect satisfaction. The trade prefer them and the public demand them because they are "Honest goods at honest prices."

IVER JOHNSON'S ARMS & CYCLE WORKS,

New York Office: 99 Chambers St. FITCHBURG, MASS.



Vollmar Improved Perfect Washer

It has a most enviable record. A perfection of its kind—will wash more clothes in less time, do it better and easier, with less wear and tear, than any other machine. Prices on application.

COLBORNE, Sept. 10th, 1902,

Messrs. WORTMAN & WARD MFG. CO., LONDON,

DEAR SIRS,—We have used the washer again and find that further use increased its value to us. The girls are simply delighted with it, as they can do the washing and be presentable for callers if need be.

MRS. R. WEEKS.

The above is a sample of the many kind words said about the Vollmar. (Use the street No. when addressing us.)

The Wortman & Ward Mfg. Co., Limited

No. 1500 William Street, London, Ont.

J. A. Werner, tinsmith and grocer, of York, Ont., is advertising his business for sale.

The A. Pickard Co., general merchants, Exeter, Ont., have sold out to Rowe & Snell.

The assets of the hardware stock of L. Harry Gaudry, Quebec, were sold on March 11.

The Rideau Paper Box Co., Ottawa, have sold out to The Ottawa Paper Box Company.

Brunt & Denning, general merchants, of Kerwood, Ont., have sold out to John Denning.

A. Widdifield, general mecchant, Lawrence Station, Ont., has sold out to Samuel Wildon.

J. P. Shannon & Co., hardware merchants, Killarney, have sold out to Jas. McNaughton.

G. B. Hearn, general merchant, Richard's Landing, Ont., is advertising his business for sale.

Moore Bros., hardware merchants, of Georgetown, Cnt., have sold out to Anthony & Howes.

L. G. Jourdain, hardware merchant, of Three Rivers, Que., has sold out to Arthur and Eugene Panneton.

PARTNERSHIPS FORMED AND DISSOLVED.

Ballantyne & Co., plumbers, Montreal, have dissolved.

Martel & Puize, sewing machine merchants, Montreal, have dissolved.

Connell & Clement, agricultural implement agents, Arcola, Man., have dissolved.

Amiot, Lecours & Lariviere, hardware merchants, Montreal, have dissolved partnership.

A. Joly & Co., painters, Montreal, have dissolved and a new partnership has been registered.

FIRES.

T. H. Donville, general merchant, Halifax South, Que., has been burned out.

W. J. Muirhead, Carleton Place, Ont., had his hardware stock damaged by fire and water; insured.

DEATHS.

John H. Praten, carriagemaker, Watertown, Ont., is dead.

George Boxall, stove and tinware merchant, Toronto, is dead.

Jos. Arseneau, of the firm of Gauthier, Arseneau & Co., general merchants, Little Cascapedia, Que., is dead.

MACHINERY

A SHORT TREATISE ON GAS ENGINES.

By GEO F. BARNARD

Of late considerable attention has been paid to gas and gasoline engines as a means of generating power, and only recently has its economy been demonstrated and its practicability proven. The steam engine will always have a field, but there are a great many instances in which it has had its day. Electricity is not, when sifted to a fine point, so much a power as it is the substance of a power applied. Although gas and gasoline engines are made up of parts having a general similarity to those of the steam engine and with like functions, they have one fundamental point of difference. The steam engine derives its power from the chemical conversion of fuel into heat, by means of combustion which takes place in the furnace under the steam boiler.

The gas engine is an internal combustion engine, whose piston is driven directly by the expansion caused by the heat of the combustion of a charge of gaseous fuel ignited at the proper moment within the walls of its cylinder at each power-producing stroke.

The fuels principally used are gas, gasoline and petroleum. The quantity required per h.-p. depends largely upon the quality of fuel. These engines are capable of being operated on either one gallon of stove gasoline, 74 deg., 170 ft. of city or artificial gas, or 15 ft. of natural gas per h. p. per 10 hours.

By means of governors a gas or gasoline engine automatically regulates or measures the amount of fuel at each power stroke proportionate to the amount of work it is called upon to perform; charges its own cylinder with combustible gases; ignites this charge thus taken and confined, by means of a hot tube igniter or electric spark, and the resultant mechanical force thus created with the minimum loss is instantly transmitted to shaft and flywheels, and from pulley to belt. The gas engine's furnace or firebox is its cylinder clearance and port cavities. One of the latest improvements is a gasoline attachment, which measures the exact amount of gasoline required, thoroughly mixing it with the ingoing charge of air, giving always the proper mixture. This device can be varied at pleasure to produce the proper mixtures and can be locked in position.

A certain part of steam, after it has performed its function in the cylinder of the steam engine, is exhausted into the atmosphere with a great percentage of its initial energy removed. The same rule applies to the gas engine. After combustion has taken place, a certain residual product remains in the shape of water and carbonic acid gas. This residue is removed at one sweep of the piston following upon the combustion stroke, and all are of the nature of a gas.

In up-to-date engineering practice, and for stationary purposes, what is termed the "four-cycle" engine is used, as this type possesses a great advantage over what is known as the "two-cycle" in point of economy.

The primary requisite of the "four cycle" is the "admission" of the charge which enters the cyclinder during the outward stroke of the piston; this completed, the valve, which admits the charge, closes, and the mixture in the cylinder undergoes "compression." When this compression is carried to the highest possible point, the charge is ignited and expansion takes place. Following the expansion strokes the products must be discharged or exhausted through a valve provided for that purpose. Admission, compression, expansion, and discharge form the four cycles.

The two-cycle engine keeps the mixture under pressure and admits it to the cylinder without previously clearing out the exhaust. This form of engine takes a charge every revolution, and is used quite extensively for marine purposes.

The conditions which usually prevail in installing an engine of 200 h.-p. differ very materially from those which exist in the case of a four h.-p. The consequence is no one type of engine will answer all the varied requirements. An engine of the 200 h.-p. type would require an auxiliary device, such as a compressed air tank or small starting engine to turn it over. The four h.-p. can be readily started by hand. Again, the same style of engine that would be used for running an electric-light plant, would be out of place furnishing power for a sawmill. The agricultural gasoline engine, that is, an engine mounted on wheels, for use on farms and plantations located a great distance from a railroad, is a machine that quite a number of manufacturers are devoting their attention to.

There might be many other special conditions which would make the gas or gasoline engine preferable, but no exact rules can be made in this matter, without a knowledge and careful study of existing conditions in each individual case in which an engine is required.

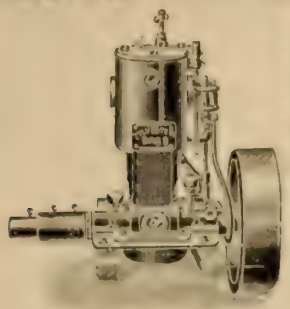
WHY THE ENGINE STOPPED.

I heard a story the other day about an oil engine, which my readers may rely upon as being true, writes "Vulcan," in Ironmonger. A well-known firm of oil engine makers supplied one of their motors to a customer in a neighboring county, and, as usual, the man who fixed the machine up filled the tank with oil before leaving the purchaser's premises. As the tank held about a barrel and the engine only ran intermittently, all went well for some weeks, until one day an urgent message was received by the makers begging them to send a man over at once, as the engine had jammed and wouldn't work. Judge of the man's amazement as well as amusement, on finding that the sole reason why the engine refused to run was because the oil was exhausted. The attendant evidently thought that the oil, like that in the widow's cruse, wasted not with the using, but would endure as long as the engine.

ONE OF LONDON'S BUSY FIRMS

On Thursday last three boilers for British Columbia were completed and tested by the Dominion inspector for a working pressure of 120 lb. to the square inch, in compliance with the stringent British Columbian laws. At the same time a second large retort, 78 in. diameter by 37½ ft. long, for The Montreal Silicate Brick Co., was being loaded for shipment. Other boilers are now under construction for Manitoba and New Brunswick, in addition to several for Ontario users, including among them four large Scotch boilers, with corrugated internal furnaces, designed to carry a working pressure of 160 lb. One of these is for A. Nelson, of Tilbury, Ont., for his electric station, and the other three are for the new works of The McClary Manufacturing Co., of London, and will be used to supply steam for two of this firm's "Peerless" self-oiling engines of 170 and 70 h.-p. respectively.

THE SYLVESTER GASOLINE ENGINES AND LAUNCHES.



Awarded the Bronze Medal (the highest prize) at the Toronto Industrial Exhibition 1902. The simplest, most reliable, economical and substantial Engine on the market. Can be used any place, by any one, for any purpose. Sizes 1½ to 16 horse power. Stationary, portable, and marine. Also extra fine Gasoline Launches, best in the market. Write for Catalogue "H" and testimonials.

MACHINERY AND ELECTRICAL NOTES.

The [illegible] Montreal, which was burned on Monday, will be replaced by a [illegible] will be built by The Dominion Engine Works, Limited, Lachine.

The Hamilton Pump Co., Brandon, Man., are putting up a large building and will equip it with modern machinery, in order to increase their output.

A 25 h. p. "Wm. Watte & Son" portable engine and boiler, on wheels, was shipped to Nogar & Appleby, Wall's Siding, Scotia Junction, by H. W. Petrie, Toronto.

A 4 h. p. "Haggas" gas engine was purchased by R. H. Harrison, Woodstock, Ont., from H. W. Petrie, Toronto, for the purpose of running his cake machines and dough mixers.

The Nova Scotia Steel Co. has had such an excellent year that they issued last week a half-yearly dividend of 3 per cent., as compared with 2½ per cent. dividend for the same period last year.

A "Housey" gas engine was sold to Ramsay Bros., Woodstock, Ont., for the purpose of truning an ice-cream freezer by H. W. Petrie, Toronto. This class of engine is fast becoming popular for work of this kind.

A fine upright boiler was shipped by H. W. Petrie, Toronto, to W. H. Collinson, of the Meadowbrook Fruit Farm, near St. Catharines. This outfit is to be used for boiling a solution to spray upon the trees to prevent the presence of that well known scourge "San Jose Scale."

James Sherriff, manager of The Brandon Machine Co., Limited, Brandon, Man., while in Toronto, placed an order with H. W. Petrie for a 24 in. x 12 ft. "London" engine lathe, and a 24-in. "London" triple-geared iron shaper. Mr. Sherriff says business in his line throughout Manitoba is booming.

John A. Manley, Grand Forks, B. C., states that he has interested Chicago and Kansa City capitalists in a project which will involve the erection of a 2,000 ton smelter at Grand Forks. He also states that 2,000 ton h. p. will be developed seven miles from Grand Forks, on the Kettle River, and transmitted to the smelter.

Work on the new sugar mill at Raymond, N. W. T., is being vigorously pushed by C. M. Bradstock, the constructing engineer. There are about on the ground 50 cars of structural iron, 75 cars of machinery and about 10 cars of lumber for the building. The main building is 350x70 ft. In addition to this there are large boiler houses, machine shops, and switch and wagon sheds.

The famous Krupp Works at Essen, employ between 20,000 and 25,000 hands, most all of whom reside in dwellings belonging to the firm. In the great mill of Essen are 1,195 furnaces of various kinds; 286 boilers; 92 steamhammers, of from 200 to 10,000 lb.; 370 steamengines, with a total of 37,000 h.-p.; 1,724 different machines and 361 cranes. The 11 high furnaces produce about 600 tons of iron daily, and 2,735 tons of coal and coke are used each day for fuel.

Fred. Robinson, of Revelstoke, B.C., and Hewitt Bostock, of Vancouver, principal shareholders in The Fred. Robinson Lumber Co., have sold out to Minnesota lumbermen for $150,000. The new owners will largely extend the capacity of the sawmills of the company, and nearly every establishment in Vancouver which handles sawmill machinery and logging supplies has a representative in the Kootenay district, to share in the orders for machinery and supplies to be given in the next few weeks.

The fight between The Kingston Locomotive Works and their machinists continues with unabated bitterness. The striking machinists are still running small advertisements in the daily papers of the Dominion, warning other machinists to stay away from Kingston: at the same time, Hon. Wm. Harty has announced that if the strike is not settled by the end of this week the works will certainly be removed to Toronto. It is now well understood that The Canada Foundry Co., Limited, Toronto, do not intend to purchase these works, but will erect a locomotive plant of their own.

GERMAN TARIFF ON MACHINERY.

THE present German tariff on machinery is given in detail by United States Consul Oliver J. D. Hughes, as follows: Locomotives and portable machines pay a duty at the rate of 8 marks ($1.90) per metric centner (220.46 lb.); the duty payable on other machines depends upon the material which predominates; if chiefly of wood, 3 marks (71c.) per metric centner; of cast iron, 3 marks (71c.) per metric centner; of malleable iron 5 marks ($1.19) per metric centner; of other metal, 8 marks ($1.90) per metric centner. These are now to be superseded by a complicated arrangement of various "progressive rates," dependent upon weights. Thus, we find that locomotives weighing up to 10 tons are to pay 11 marks ($2.62) per metric centner; those weighing over 10 tons, 9 marks ($2.14); locomotive tenders, 5 marks ($1.19); engines, motors, from 3 marks, 50 pfennigs up to 100 marks (83c. to $23.80) per metric centner; sewing and knitting machines, without frames, 35 marks ($8.33; with frames, 20 marks ($4.76); curtain, lace and tulle machines, 10 marks ($2.38); machines for working metals, wood, and stones, 4 to 20 marks (95c. to $4.76); steam mowing and threshing machines, 9 marks ($2.14); spinning and weaving machines, 6 marks ($1.43); other machines, according to the weight, from 3.50 to 18 marks (83c. to $4.28); electro technical products, 6 to 60 marks ($1.43 to $14.28); incandescent lamps, 120 marks ($28.56); vehicles for rails, 5 to 12 marks ($1.19 to $2.86); other vehicles, 20 to 150 marks ($4.76 to $35.70); and bicycles, 150 marks ($35.70) per metric centner. It can be easily seen how hard it will be to have these rates applied uniformly, in view of the latitude allowed to the appraising officials.

MR. GERELL TO RETURN.

J. Gerell, who formerly had charge of the shipbuilding plant of The Bertram Engine Works, Toronto, and who is now engaged as manager of shipbuilding works in Sweden, has been secured to succeed A. Angstrom, who left The Bertram concern a few weeks ago to accept a similar position with The Canadian Shipbuilding Co., Limited. Mr. Gerell is expected in Toronto in a few weeks to assume his new duties.

NEW STEEL WORKS FOR NOVA SCOTIA.

Hants J. Logan, M.P. for Cumberland, N.S., is interested in a proposal to establish a steel industry at Parrsboro', N.S. When interviewed at Ottawa on Monday, Mr. Logan discussed the matter freely. "Such an enterprise," he said, "would have exceptional advantages, for Parrsboro' is an open port the year around, which is proved by the fact that coal is being shipped from there to New England points almost daily. The Springhill mines are quite contiguous, and there is a down grade from the mines to the water front. At Springhill, as is well known, the supply of coal is inexhaustible, and it is of the proper quality for the manufacture of steel, while to the northeast of the port lies the Cobequid Mountains, known to contain immense deposits of excellent ore. A railway from Parrsboro', 30 miles long, would tap these deposits. To the west of Parrsboro' there are also known to be deposits of iron, but so far only in small pockets.

"The Minas Basin, which is less than 20 miles wide, separates Parrsboro' from the County of Kings. Along the northern portion of the county, iron is known to exist, and at Torbrook, in Annapolis County, are very large deposits of ore, which carries 50 per cent or more of iron. It has been estimated by one of the best authorities that at Torbrook there are over 200,000,000 tons of this ore.

EDWIN H. GRENFELL & CO., LONDON, CANADIAN AGENTS.

INDUSTRIAL GOSSIP

THE U. S. Steel Corporation have decided to add a $9,000,000 tube plant at McKeesport, Pa. Two thousand men will be employed.

Stratford, Ont., has voted in favor of purchasing the plant, etc., of the Stratford Water Supply Co. for $98,000.

Higgins Bros.' sawmill at Metcalf, Ont., was destroyed by fire on Monday morning; loss $3,000. It may be rebuilt.

The Canada Cycle and Motor Co., Limited, Toronto Junction, are so rushed with business that night work has become a necessity.

A Prescott, Ont., despatch quotes Dr. Archbold, of that town; as authority for the statement that plans for a new starch factory to be erected there are being prepared.

An iron and steel plant is to be established at Seattle, Wash. The promoters have acquired several iron mines in British Columbia, from which they propose to get their ore.

The extension of The Greening Wire Co.'s plant in Hamilton is arousing considerable attention in that city. The new building will be fully 200 ft. long and large in proportion

Hon. F. R. Latchford states that 2,000 tons of steel rails in excess of the quantity first ordered will be needed for the Temiscaming railway, which the Ontario Government is constructing.

The output of the Dominion Iron and Steel Co. at Sydney, N.S., will be almost doubled this summer. The plate, scalp and rail mills will be in operation by July; also 400 coke ovens and four blast furnaces.

"It could be shipped by a railway which is being built to Victoria Beach, on the Bay of Fundy, and thence to Parrsboro', or by building a road to a port on the Minas Basin, the distance would be materially lessened."

A report has gained currency that some of the leading men interested in mica deposits in Ontario and Quebec will combine with the purpose of offsetting a movement of U.S. capitalists to control the mica business of the world.

J. D. Pennington proposes to establish refrigerator works in Dundas, Ont., at a cost of at least $20,000, and to employ more than 40 hands. He wants a loan of $15,000, which he promises to pay back at the rate of $1,000 per year.

The C.P.R. have let a contract for 140 miles of grading for their extension from Regina to Arcola, N.W.T., to Messrs. Foley, Locke and Larson, of Moosomin and Winnipeg. The track is also to be laid as soon as possible.

The Deseronto, Ont., Iron Co. have taken proceedings against the Rathbun Co., Deseronto and Toronto, for $15,000 for breach of a contract to deliver 85,000 bush. of charcoal per month, to be delivered daily in equal quantities.

Willis Chipman, civil engineer, Toronto, invites tenders before April 1 for materials and for the construction of three steel water tanks for municipal waterworks purposes, as follows: Trestle and tank at Bridgeburg, Ont., opposite Buffalo, N.Y., on the Niagara River; trestle and tank at Edmonton, Alberta, about 200 miles north of Calgary, N.W.T.; trestle and tank at Strathroy, Ont.

The engagement of men by The Deering Harvester Co., Hamilton, has been commenced. A dozen men are now employed in the woodworking department, in which a full staff will probably be engaged by April 1. The construction of the malleable iron foundry, which is to be 1,000 ft. long and 85 ft. wide, was started last week by Contractor Webb. The erection of this building has been delayed somewhat by the lack of structural steel, which is now being manufactured by the Hamilton Bridge Works.

CANADA'S FOREIGN TRADE.

Canada's foreign trade continues to expand in a satisfactory manner, as the comparative figures for the eight months ending February 28, this year and last year, will show:

IMPORTS

	1902.	1903.
Dutiable goods	$ 74 368 939	$ 84,571,984
Free goods	49,342,300	51,020,505
Total	$123,711,239	$135,592 489

DOMESTIC EXPORTS—SIX MONTHS.

	1902.	1903.
The mine	$ 24,617,043	$ 22,731,562
The fisheries	10,798,438	8,450,122
The forest	22,240,309	25,690,415
Animals and their produce	44 203,926	53,110,770
Agriculture	21,890,748	29 015,941
Manufactures	11,424,953	13,010,741
Miscellaneous	24,804	69,041
Total	$135,200,221	$152,084,622

NEW COMPANIES INCORPORATED

The Belmont Bay Gold Mining Co., Limited; capital, $1,000,000.

The Automatic Milk Agitator Co., Limited, London, Ont.; capital $20,000.

The Sanford Furniture and Woodenware Co., Fenlon Falls, Ont.; capital $100,000.

The G. A. Thorpe & Maddock Manufacturing Co., Limited, Toronto; capital, $100,000.

The Canadian Otis Elevator Co., Limited, Toronto: which is to be a branch of The American Co., which is of the same name.

The Muskoka Lakes Navigation and Hotel Co., Limited, Toronto; capital, $250,000; directors, Samuel Barker, Henry McLaren and R. A. Lucas, of Hamilton; A. P. Cockburn, H. C. McLean and F. J. Phillips, of Toronto; George Homer, of Gravenhurst, and M. S. Wilson, of Dundas.

The de Forest Wireless Telegraph Co. of Canada, Limited; capital, $2,500,000; directors, Alexander McKenzie, Edwin G. Long, Charles V. Bennett, George H. Templeton and James W. Ross, Toronto. The company will acquire the present and future inventions of Lee de Forest that bear upon wireless telegraphy, will conduct a wireless telegraph business, and will enter into arrangements with cities and municipalities to establish the new system. The head office of the company will be in Toronto.

Clare Bros. & Co., Limited, Preston, Ont; $290,000 capital; directors, Geo. A. Clare, Frederick Clare, Henry C. Hilborn, Berlin, Ont. The avowed purpose of the company is to make and sell all kinds of heating and cooking apparatus, castings of all kinds, household and agricultural implements, tools and machinery, and general machinery, and iron and general founding, hardware, electroplating and the purchase and sale of all kinds of metals, merchandise, tools and other things required or used by stove, tinware or hardware dealers or manufacturers, and the carrying on of all such business as is usually carried on in connection therewith or as incidental thereto.

RETAILERS VS. JOBBERS AND MANUFACTURERS.

Editor HARDWARE AND METAL,—I read with a great deal of interest in THE HARDWARE AND METAL of last issue the account of the hardware section of the Retail Merchants' Association entertaining their friends in Toronto. The idea of this so-called bond of union existing so peaceably and harmoniously in Toronto struck me with such force that I was compelled to ask myself the question: Why is it that the merchants in the towns and villages do not get along better together, apparently so much price-cutting going on? This question, no doubt, is brought up and discussed pretty freely, not only by the jobbers and manufacturers, but by their representatives who are in and out with them from time to time.

Now, Mr. Editor, this is a burning question, and one, I dare venture to say, touches the heart of many retail hardware merchants to-day, should they wish to speak out their mind on the matter.

You would infer from some of the remarks made at this meeting in question, that the retailers were pretty generally at fault, viz., too much price-cutting, petty jealousy, watching their neighbors' rivals to see what they are doing, etc.; otherwise they (the retailers) would have more comfort, more pleasure and more profit in their business. Those are Mr. Hallarn's views, and he furthermore states that he felt that there was not a manufacturer in Canada who did not desire the welfare of the retail trade. To this I am obliged to say that I am sorry things have changed since Mr. Hallarn's time expired in the retail business. However, we will excuse him this time. No doubt he didn't have his thinking cap on, or perhaps he partook too freely of oysters! Bear in mind I am not shielding retailers as a whole. Some of them, I regret to say, exercise poor judgment in many ways. But who are the people we have to thank, and, on the other hand, accuse for causing this sort of work? I ask my fellow-merchants to glide over the names once more of the paint and oil manufacturers and jobbers represented at this meeting. How many can you recognize who are in a habit of calling upon you, who habitually make it a practice of selling to your customers, authorized to do so by the heads of the firm they represent, quoting them prices equally as low as to the trade; and they make sure that the interests of all the consumers are looked after first. Then we, as dealers, are interviewed in this fashion (and very gentlemanly too, rubbing the palms of his two hands together): "Anything I can do for you to-day, sir?" If the reply is in the negative, "Well, how is it, I have called upon you so many times, and you invariably turn me down. For goodness sake, make me up something. I have been out so many days and have done very little, etc."

My question to him is this: "I suppose you have called on So-and-So," mentioning three house painters, two saw mills, grist mill and two small factories. His answer invariably is: "Well, if I don't, some one else will."

"Very well then, sir; should I buy from you, I wish you to inform me to whom I am to unload?"

Here, there is invariably a long pause.

"Now, sir, whenever you come to town again, I wish you to call in whether it be in winter or not, come in and get a warming, or be it for a chat, but for goodness sake don't ask me for an order, for we have feelings; so has a dumb brute."

A little incident happened not more than three weeks past, by a gentleman from Toronto representing a paint firm, with the same tune as above stated, and I learned afterwards, that he had, at the same time, two orders in his inside pocket.

Mr. Trowern "felt, that the speeches of the evening had demonstrated to all, the necessity of a stronger organization for the retailer." Quite true; also that the representation of the wholesalers and manufacturers had shown their willingness to unite in a good cause with the retailers. I truly hope so; but I think there are so many small so-called jobbers out to catch a little business, not only in paints and oils, but other lines I could mention, that our hopes may be in vain until the retailer wakens up to the fact that this trade is his, and he can get it by degrees in going after, same as I did, and in quoting the low prices on the right quality of goods.

It is just as J. Willmot stated very plainly in his address, that there had never been a time in history when there was more reason for retail merchants getting together to protect their own interests as well as their customers, and I am satisfied that the trading stamps were not the only grievance stamped in his head, had he been free to express his mind fully.

Mr. Dexter realizes the importance of a cordial bond of sympathy between wholesalers and retailers. He knows the value of organization, whereby prices may be kept at a living margin. This seems impossible with the retailer, so long as the wholesalers and manufacturers persist in selling to the consumer. When I inform you that it is a lamentable fact that the farmers now are being catered to by so-called jobbing houses, is there any bond or sympathy in that? Now, Sir, I may have curtailed my remarks a little on this sublect, but I thought it a very opportune time to express my views (after I saw the account of this meeting) on what seems to be possibly an attempt or first step to cause better feeling between the three existing bodies.

I certainly should like to hear what some of our other town merchants have to say on this vital subject. I feel, personally, that in expressing my views in this matter as I have done there are many others thinking seriously in the same line. And should we stand shoulder to shoulder and show the strength of "John Bull," which we can do, success is ours. Unity is strength, and I now strongly advise organization as quickly as possible, that our own interests may be protected.

RETAILER.

Fergus, Ont., March 11.

SPORTING GOODS.

The position has long been taken by HARDWARE AND METAL that hardware retailers should do the bulk of the retail business in sporting goods. An examination of the spring and summer goods catalogue, which has just been issued by Nerlich & Co., Front st., West, Toronto, emphasizes the strength of this position. Why should not baseball bats, mitts, masks, gloves, tennis nets and rackets, lacrosse sticks, croquet sets, footballs, express wagons, tricycles, hammocks, air rifles, toy garden tools, tops, marbles, flags, etc., be included in the regular stock-in-trade of every hardware store? It is as much a hardware line as cutlery, builders' hardware, or, in fact, any line in the shop. There is good profit in these goods; if carefully bought there is no likelihood of left-over stock. Moreover, by taking an interest in the sports and pastimes of the youth and children of his town, a hardwareman may aid materially in extending his connection. The matter is worth studying out, and we would advise every hardware retailer, whether he handles sporting goods or not, to secure Nerlich & Co.'s catalogue and examine the large variety of lines referred to. To those who have not yet interested themselves in the trade we would advise the present time as a suitable one to start.

The assets of J. C. Desruisseaux's general business, Leclercville, Que., are to be sold on March 19.

MAXWELL MOWER.
Inch Low Wheel

The Chief Floor Hinge

This has been brought out to overcome the objectionable features of the floor hinges at present on the market, which made it necessary to cut a large hole in the floor to receive the hinge, and as all the working parts were beneath the floor, it was impossible to prevent water and dampness from destroying the mechanism. ***Our Hinge*** is secured to the surface of the floor after it has been applied to the door, always bringing the door in perfect allignment before it is fastened to the floor. The tension of the Spring is regulated at any time after the door is hung, permitting the swing of the door to be adjusted as desired. Ask your jobber to show you a sample manufactured by

THE VALUE OF THE CHEMIST.

IN the last annual report of the Ontario Agricultural College, reference was made to the resignation of Dr. A. E. Shuttleworth, professor of chemistry. After paying a tribute to his ability the statement was made that he had accepted a position from the Ontario Beet Sugar Co. at a much larger salary than was being paid him at the college.

This reference to the salary question raises an interesting point. It is fortunate that while the college has lost Professor Shuttleworth, he has not been lost to the country. Too frequently after having trained men in this country in chemistry and other branches of science they have received such flattering inducements from the United States that many of them have been lost to us.

It is a common complaint that chemists are not recognized at their worth in Canada. There is unquestionably a great deal of truth in this. The importance of the chemist in the laboratory is becoming more and more necessary in nearly every branch of manufacturing industry. At the same time, however, we do not appear to be setting a very high value upon him, if the remuneration we, as a rule, offer him can be taken as a criterion.

Instances have been known where a manufacturing concern has offered proficient chemists the magnificient sum of $10 per week. One man who was offered this sum went to the United States, and there secured a situation from $2,000 to $3,000 to start on.

Some manufacturing concerns may have the excuse that they cannot afford to pay a chemist even a moderate salary, much more a large one, but with the Ontario Government there should be no such excuse. The Government ought to have been able to have paid Professor Shuttleworth fully as much as any private commercial enterprise.

Governments as well as private commercial enterprises, have evidently yet a great deal to learn before they can value men at their true worth.

A CALL FOR ORGANIZATION.

THE attention of the retail hardware trade is drawn to a letter, which is printed on page 52 of this issue, in regard to the formation of a retail hardwaremen's association in the County of Simcoe.

While this letter more strictly interests the hardwaremen in the county named, it should be of more than a passing interest to the retail hardwaremen in every part of the Dominion where at present no such organization exists.

If organization served no other purpose than bringing the hardwaremen together and getting them acquainted, its existence would not be in vain, and an important step would be taken towards remedying the grievances which exists in the trade, for a great deal of the unpleasant competition which sometimes exists among members of the retail hardware trade is largely the result of a lack of acquaintance among those engaged in it.

As far as the hardwaremen in Simcoe County are concerned, it is to be hoped there will be a ready response to Mr. Otton's call to his fellow-hardwaremen to get together and organize.

WAKE UP, SIR RICHARD.

WOMEN are not likely to hold any position of importance in the new Department of Commerce at Washington. At any rate, this is the intention of Mr Cortelyou, the Secretary of Commerce. He claims that men are better workers, particularly in important positions. It yet remains to be seen whether Mr. Cortelyou will be able to carry out his intention, and certainly he has yet to encounter the wrath of Susan B. Anthony and other champions of woman's rights.

Without discussing the merits of Mr Cortelyou's position, as to whether men or women are most efficient workers, Mr. Cortelyou's intentions are undoubtedly good. He recognizes that the Department of Commerce is an important one, and that it may be administered efficiently. He conceives that, in order to carry out his purpose, he must employ the best assistants possible.

We do not know what the views of Sir Richard Cartwright, the Minister of the Canadian Department of Commerce, are in regard to the question of women for carrying on the detail work of his Department. Probably he has never given the matter thought. Certainly, his Department is not carried on with energy or enterprise, whether his assistants be men or women.

Unlike Mr. Cortelyou, he evidently does not think the Department is an important one. At any rate, he does not evince any concern for it. Time and again the business men of this country have asked for important changes, and rarely, indeed, has he acceded to their requests. The Department is one of the most important in the Government, and yet it is administered in a most perfunctory manner. There is no portfolio in the Dominion Government in which the policy of drift is so persistently pursued.

Hon. W. S. Fielding, Sir Wm. Mulock, Hon. Wm. Paterson, Hon. Sydney Fisher are all men of energy and zeal for the duties of their departments. It is a pity that Sir Richard Cartwright has not caught some of their spirit. In the meantime the commercial interests of the country are suffering.

THE GAMEY BRIBERY CHARGES.

NOTHING in political affairs in Canada for many years created such a sensation as the charges which were made in the Ontario Legislature on Wednesday afternoon against the Hon. J. R. Stratton, Provincial Secretary.

While the charge of attempting to buy up the Legislature of Ontario nineteen years ago created an immense sensation, it is doubtful whether it was as great as that just created by Mr. Gamey's allegations. The charges in that instance were made against private members of the House, and in this instance they are preferred against a Minister of the Crown. It is this that gives them the greater seriousness.

If Mr. Stratton is guilty, his guilt is greater than could possibly be that of a private member of the House. He says emphatically that he is not guilty. Mr. Gamey just as emphatically declares that the $4,000, which he received and alleges to have shared with Frank Sullivan, came from the hands of Mr. Stratton.

We have no desire until the guilt of Mr. Stratton has been established, to pronounce him guilty, but there certainly must be an investigation, and an investigation that will satisfy every one. Premier Ross has promised this investigation, and proposes that it shall be made by two judges of the Supreme Court of Judicature or by the president of that court and two other officials to be appointed by the Government without reference to the House.

There may be some objection to the manner of appointing the judges. Under the extraordinary and unfortunate circumstances which prevail it would be much better if the House was given full freedom in the making of the appointment. The charges are too grave to permit of the slightest suspicion in regard to the constitution of the commission or as to its method of appointment.

It is to be regretted, indeed that the leader of the Opposition has declared against the proposal to submit the charges to a commission of judges. His proposal that the charges should be referred to a committee of the House will, we are convinced, not appeal to the sense of justice which we believe prevails in the country.

If the commision is to be impartial its members must be taken from the Judiciary and not from the Legislature. If the latter course were adopted, the commissioners would, of course, be selected from both sides of the House with in all likelihood a majority of one or more from the Government side. And no matter how impartial the gentlemen composing it might be, it is only natural that where a point could be strained either in favor or against the accused Minister it would be, for the fate of the Government as well as the guilt or innocence of Mr. Stratton depends upon the verdict of the commission. For this reason it must be insisted upon that the commission shall be selected from the Judiciary.

In the meantime it is not a time for the exultation of one party at the expense of another. It is a time for serious reflection. It is quite true that Mr. Stratton is a party man, but it is equally true that he is a member of a legislative body whose very existence is a symbol of jutice and freedom, and besides, is a Minister of the Crown.

If, therefore, he is as guilty as the charges against him allege, it is not the party to which he belongs that would alone suffer, but the reputation of the Ontario Legislature in particular and that of the Parliamentary system of the country in general, as well.

MAKE USE OF THE TRAVELLER.

I had made one or two calls and found that any subject but the atmospheric conditions would not be tolerated, so I suggested to one man who had no less than three clerks in the store—doing nothing—that we make a window display. The idea found favor with the proprietor. I at once secured a frock coat, got right down to work and succeeded in arranging a very neat and tasty display—excuse my modesty. Accidently we found that a certain line was getting low. Result—an order for several cases of that particular line; a knowledge of his best seller in our line; and of his stock of our other goods. We got nearer our customer; we did him a favor; we did our firm some good; and I was certainly benefitted. He said, "Thank you very much; come again." Boys, when you feel that the weather is too bad to travel much, fall in with some man and trim your sails and make sales by trimming his window.

The above is from a commercial traveller's letter and suggests that frequently a dealer may get excellent ideas on window trimming from travellers who call on him. Going from place to place, visiting all stores from the largest to the smallest, they must come across a number of clever displays of goods which could be repeated by other dealers to advantage.

Very often dealers do get good ideas in this way in arrangement of the store-fixtures, etc. But it is not the traveller's business to look after these things and he seldom opens the subject unless prompted by his customer.

MEETING DEPARTMENTAL STORE COMPETITION.

THE article in last week's issue in regard to the invasion of the territory of the local merchants in Manitoba by the department stores in the eastern cities has naturally attracted a great deal of attention, particularly on account of specific cases given in regard to the way this trade is secured.

It is obvious to everyone that these department stores are largely cutting into the field of the local merchants, not only in Manitoba and the Northwest, but in every part of the Dominion, through the medium of advertising.

Besides advertising in the ordinary way, the department stores are always looking about for ways and means of reaching customers. We know of an instance of a daily paper in a certain town which supplied a department store in Toronto with a list of its subscribers, the list being required by the department store for the purpose of mailing circulars and catalogues to that particular paper's readers. The price paid for the list was $150.

There is no more effective way for minimizing the influence of the department store than by the local merchants giving all publicity that is within their power to the goods which they carry in stock. The department stores frequently advertise bargains, but the great majority of the prices they quote would not be sufficiently attractive to get the business if they were compared with the figures at which the local merchants can sell their goods.

It is this fact that needs to be impressed upon the consumer, and the only way that this can be done is by means of publicity. One of the best mediums for this purpose is the local newspaper. An advertisement in the local newspaper, as a rule, is the cheapest thing which the country merchant gets.

Besides advertising in the local papers, merchants should elicit the sympathy and co-operation of the local publishers in educating the consumers to the fact that their requirements can be supplied just as cheaply, if not more so, than by the large departmental stores in the chief trade centres of the country.

CONTROL OF ELECTRICAL ENERGY.

IT was announced at the opening of the Ontario Legislature on Tuesday that the Government would introduce a Bill dealing with the question of municipal control of electrical energy. This decision on the part of the Government is, no doubt, the result of the agitation of the last month or two over the chartering of a fourth company for the development of electrical energy at Niagara Falls.

Large as will be the electrical energy that will be developed by the four companies in question, it will be almost infinitesimal, compared with the electrical energy possible of development at the Falls. At the same time, however, it is only proper that the Legislature should provide safeguards for the future.

We are only on the borderland of electrical possibilities, and we cannot afford to barter away our possibilities for a mess of pottage, as we now seem inclined to do.

Municipal control may, perhaps, not be the best safeguard, particularly in view of the general unsatisfactory manner in which municipal affairs are often managed. At the same time the rights of the public must be respected, and if municipalities desire to go in for municipal ownership of electrical power, it is only right that they should be able to do so. At present the securing of this is no easy task, as Toronto learned from experience a year ago when applying for authority from the Ontario Legislature to transmit electrical energy from Niagara Falls. Someone has said that the people should have the power to do wrong if necessary. There is a good deal of wisdom in this remark, for it is by having this power that it will learn to do right. If municipalities make mistakes, they must learn by experience to avoid them. Greater injustice is, as a rule, done by denying the people freedom of action than is likely to result from liberality in this particular.

The Legislature should be able to pass an Act safeguarding the interests of all concerned. This will prevent one municipality depriving another of its rights to develope electrical energy and private corporations from discriminating against this or that town or city.

Electricity promises to be the great motive force in the manufacturing industries of Canada before a great while. If electrical energy is monopolized, the manufacturing industries of the country must necessarily be affected as well as the rights of municipalities interferred with.

It is now generally conceded that Canada has been over liberal in her dealings with railway corporations. She has given in bonuses and loans, not counting land grants, nearly $250,000,000 to the railway companies, while she has, at the same time, practically no voice in the regulating or control of the freight rates of those railways, much to the detriment of the commercial interests of the country.

Let us be careful that we do not repeat, in regard to the electrical companies, our mistakes in regard to the railway corporations.

RETAIL PRICE OF COILED WIRE.

SOME misunderstanding appears to prevail among retailers in regard to the proposal of the Coiled Wire Association as to the selling price of coiled wire. A hardware dealer in an Eastern Ontario town, for instance, writes as follows :

> It would be a detriment to all the merchants handling that wire. The No. 9 wire will cost, delivered at his town, $2.83. Just imagine a merchant handling that wire from the railway station to his warehouse and re-weighing out to a customer for the small advance of 7c. per 100 lb., and on No. 12 wire a similar advance. We sell Nos. 9 and 12 at $3.25 per 100 lb., and do not consider it any too much profit. It is only an average of 8 per cent.

From what we can gather, it is not the intention of the Coiled Wire Association to confine the selling price of wire to an advance of 15c. over the cost figure in small lots, but to suggest to the retail trade that this be the minimum advance. We are assured by a member of the Association that this is their intention ; in fact, in the circular which they recently sent out to the retail trade they say : "We suggest that at least 15c. be added to the delivered cost price in small lots." The advance, therefore, that they suggest is the minimum, and not the maximum, thus leaving the dealer the option of getting as high a figure as he possibly can. It is also, as a matter of fact, optional in regard to the minimum price.

The Association was induced to take this matter up on account of the low prices at which some of the retailers in the country were selling coiled wire, as a result of competition among themselves, the latter, in some instances, selling at a lower price than they even paid for the wire.

It is to be hoped that the retail trade will, as the Association suggests, aim to secure, at least, an advance of 15c. on the cost price, and as much more as in justice, circumstances will allow.

AGITATION FOR AGRICULTURAL COLLEGES.

THERE is quite an agitation in the Maritime Provinces and in Manitoba for the establishment of agricultural colleges. The good work that has been done by the Ontario Agricultural College at Guelph no doubt stimulates the desire for these colleges. The scientific farming which is becoming so marked in Ontario is to no small extent due to the College at Guelph, which yearly sends out large numbers of graduates fitted for the work of scientific farming. The day when science and agriculture were thought to have no connection with each other is long past, and it is a good sign to see farmers and fruit-growers in the other Provinces agitating for what they recognize is so necessary to the agricultural life of the country.

In Halifax, the other day, Professor J. W. Robertson, Commissioner of Agriculture, who has probably done more for the development of Canada's agricultural industry than any man in the Dominion, said that there were 100,000 young men in Canada between the ages of 16 and 18 years of age who were preparing to be farmers.

Whether this number is exact or not we cannot say, but the number must be large and will, during the next few years, certainly very largely increase, particularly in view of the rapid development of the agricultural resources of Manitoba and the Northwest.

The business men of Canada, as well as the farmers, are interested in having these young men well trained. The more proficient the farmers are the more wealth do they create ; and no class is more interested in the creation of wealth than the business men of the country, they indirectly sharing in it.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, March 13, 1903.

HARDWARE.

THE rush continues unabated in all lines of spring goods, but the drawback that faces the trade is the great difficulty of securing goods to meet the immediate demands of the customers. There is a brisk movement in lawn mowers, screen wire cloth, barb wire and poultry netting, fence wire and cant hooks. We would suggest to our readers the advisability of purchasing their supplies of bolts and nuts as early as possible, as the stock on hand is limited and prices, in all probability, will advance. There has been an advance of 10 per cent. in the price of screws in Canada and 30 per cent. in the United States. An advance has also taken place in the discounts of fittings, which are now quoted at the following figures: Malleable pounds, 20 per cent.; ditto unions, 55 per cent.; ditto plugs, 50 per cent.; ditto brushings, 50 per cent. Pressed spikes are very firm at the advanced price of last week, and another increase is looked for.

CANT HOOKS.—There is a brisk movement in cant hooks and the prices are firm. Our quotations are: No. 12, $10; No. 8, $11.50; No. 8a, $11; No. 2, $12; No. 7a, $16; No. 6a, $14.50; No. 5a, $11.50

LAWN MOWERS.—A good business is being done in this line. Our quotations are as follows: 10½ in. wheel x 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00 Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—The past week has been exceptionally heavy and some large orders have been booked. We quote as follows: $2.80 per 100 lb. f.o.b. Montreal; $2.45 f.o.b. Cleveland in carlots of 15 tons, and $2.67½ f.o.b. Cleveland in smaller lots.

GALVANIZED WIRE.—Sales are reported good in galvanized wire. Our quotations are as follows: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—The demand has improved somewhat during the past week and orders are arriving daily. Our quotations follow: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FENCE WIRE.—A fair trade is reported in fence wire at unchanged prices. The discount is 25 per cent. with the following extras: 1 and 2 lb. hanks, 25c. per 100 lb; ½ lb. hanks, 37½c. and ¼ lb. hanks, 50c.

BRASS AND COPPER WIRE.—The market continues to be firm with a tendency to higher prices. The discount is still quoted at 60 per cent.

PRESSED SPIKES.—Several inquiries have been received since our last report. The discount is 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—The spring trade is very heavy and the market firm. We quote as follows: $3 per 100 lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

Have You Ordered Your Stock of

Milk Cans and Dairy Trimmings?

WIRE NAILS.—There is a good demand for wire nails. We quote: Carload, $2.40 and small lots, $2.45 per keg f.o.b. Canadian ports, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—The prices of horse nails are very uncertain and subject to change without notice. Quotations are as follows: "M" brand, "Oval" and "New City" heads, 55 per cent. "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off. "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—The market is steady and prices unchanged. We now quote: Iron shoes, light and medium pattern, No. 2 and larger, $3.40, No. 1 and smaller, $3.65, snow pattern, No. 2 and larger, $3.65, No. 1 and smaller, $3.90, X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.55, No. 1 and smaller, $3.80, featherweight, all sizes, 0 to 4, $5.10; toe weight, all sizes, 1 to 4, $6.35. Shoes, more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—A good movement is reported in rivets and burrs, and the discounts are quoted as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—The stock is limited and the demand large. An advance in prices is looked for. The discounts are: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent., machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—There has been an advance in the prices since our last issue, and we quote: Round head bright, 82½ per cent.; flat head bright, 82½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—There is a steady demand at unchanged prices. We quote as follows: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 10½c.; single lathyarn, 10c.

BUILDING PAPER.—The movement in building paper is reported as being brisk. Quotations follow: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 55c. per roll, tarred fibre, 60c. per roll. O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—There is a heavy demand for March and April shipment. The ruling price is $1.10 per 100 square feet.

FIREBRICKS.—Inquiries are coming to hand daily. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—Contractors are placing some large orders at present and the prospects look bright for a big season. We quote

Ferrona Pig Iron

And SIEMENS MARTIN

OPEN HEARTH STEEL

Canadian cement, $1.90 to $2.25; German, $2.20 to $2.50; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl ex store; and American, $2.10 to $2.20 ex cars.

SNOW SHOVELS. We quote as follows: Hardtext, $2.25 to $2.40; "Victor," 40 per cent off; steel railroad shovels, 48 and 5 per cent off.

FIRE SHOVELS. Very little trade is reported in fire shovels. Discounts: No. 70, 38½ to 40c. per doz.; No. 55, 55 to 60c.; No. 5, 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c. "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

COAL HODS. A small stock will be carried over, and our quotations are as follows: Japanned, 16-in., $4.50 per doz.; 17-in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS. There is a steady trade doing in lanterns, and our quotations are as follows: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dash-board, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

METALS.

The metal market has been very active during the past week, and several changes have been noted. Ingot copper has been advanced 25c. per 100 lb., and the market is firm. Ingot tin is reported to be higher, and the advance is said to be due to speculation, but the prices on tin vary according to the amount on hand, to arrive, in exporters' stocks, etc. The Dutch Government, which, to a certain extent, controls some important producing markets, is offering higher prices, which will likely affect the general market. An advance may be looked for any day. Tin is a good purchase at the present prices. We might add that it is 1c. per lb. higher in London, Eng., today. There is no change in tinplates. A small advance in one line is quoted from London this week, but the general tone of the market is steady at unchanged prices. The feeling, however, is that the position of tin would justify some advance in tinplates. Pig lead has again advanced in price and is now quoted at $3.35 in carlots. Spelter is very strong and prices are stiffening in the producing markets. Solder has also advanced 1c. per lb., and a further increase of from 2 to 3c. is expected in the near future. The English market is firm on galvanized Canadas and half-bright Canadas. No advance is reported, although operators expected one, especially in view of the recent advance in spelter, which is considerably higher and firm at the advanced price. Locally, however, no change has as yet been reported.

BAR IRON. There is a brisk demand, but there is still a scarcity in some lengths. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25 and forged iron, $2.30.

BLACK SHEETS. A good movement is reported, and the prices are firm. We quote as follows: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON. The prices remain unchanged and the market is active. We quote: No. 28, Queen's Head, $4.40; Apollo, 10¾ oz., $4.30, Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand, $4.05.

We Warrant the Product of our Dominion Works

to be equal in every respect to the goods manufactured in either of our American factories.

First Quality Material and skilled workmanship, combined with an experience of fifty years in the manufacturing of **FILES** and **RASPS**, enables us to supply our customers with First Quality goods at very reasonable prices.

Every business transaction is weighed by one standard.

Will It Pay?

If you handle ***oil of any kind*** and are considering the purchase of a

BOWSER

Self-Measuring

OIL TANK

Let us ask you a few questions:

Is it worth 10 cents a Day to handle your oil without waste?

Is it worth 10 cents a Day to sell your oil without loss of time and labor?

Is it worth 10 cents a Day to have no leaky, dirty measures and funnels to handle?

Is it worth 10 cents a Day to keep your oil room neat and clean?

We might propound a hundred questions equally as pertinent. If any one of these is worth 10 cents a day, is not the combination of the many worth more than the cost of a **Bowser Self-Measuring Oil Tank,** which will give you all these advantages.

Let us give you full particulars. Ask for Catalogue "A."

The Metallic Roofing Co., Limited,

TORONTO WINNIPEG MONTREAL

For less than case lots 25c. extra is charged.

LEAD PIPE.—There is a brisk demand for lead pipe. We quote as follows: Composition and waste at 8c. and ordinary at 7c. The discount is 37½ per cent.

IRON PIPE.—Business is good at last week's quotations. Standard pipe, per 100 ft., in lengths under 19 ft.: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, 110.55; 1½, $12.75; 2 in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1 in., $9.55; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—The reports are good as regards tinplates, and the prices are firm. We quote: Coke, $1.25 to $1.50 and charcoals, $4.75 to $5.

SOIL PIPE AND FITTINGS.—Some large orders have been received during the week. The discounts are as follows: Light soil pipe, 3 to 6-inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—Some dealers find great difficulty in filling orders. We quote as follows: $23.50 to $24.50 ex store Montreal.

INGOT COPPER.—An advance of 25c. is reported. We quote $14.50 to $15.50 per 100 lb.

INGOT TIN.—The market is very firm and an advance in price is daily looked for. We quote $33 to $33.50 per 100 lb.

PIG LEAD.—The price of pig lead continues to increase and is this week quoted at $3.35 for carlots and $3.45 for less than carlots.

STEEL.—A good movement continues in steel. We quote as follows: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; sqdare harrow, $2.15.

TOOL STEEL.—The market is steady and the demand fair. Quotations are as follows: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES.—This market is without change and a good business is doing. Our quotations are as follows: 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—We quote $7.50.

COIL CHAIN.—The demand is unusually heavy for all kinds. Quotations are: No. 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼ in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75; ¾, $5 to $5.20; ⅞, $3.30; 1 in., $3.15 to $3.25. In carlots an allowance of 10c. is made.

SOLDER.—An advance of 1c. per lb. is reported. We quote Bar solder, 21c. and wire solder, 19c.

ZINC SPELTER.—The market is firm and an advance is looked for. We quote $5.75 to $6.

SHEET ZINC.—There is a fair trade reported. We quote $5.75 to $6.

SCRAP METALS.

There is a good demand for all kinds of scrap metal. Copper is still very firm, but the demand is somewhat lighter. A marked scarcity is reported in iron and dealers look for an advance in the price. Quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50; No. 2, $7.50 per ton; machinery scrap, $17.50 to $18; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb., old rubbers, 6¼ to 6½c. per lb.

RAW FURS.

There is no change worthy of mention in the condition of the market and prices are steady at our last quotations. Offerings continue fairly good. We quote:

MONTREAL NOTES.

Screws have advanced [illegible]

Ingot copper has been advanced [illegible] per 100 lb.

The Canada H[illegible] have received a large [illegible] picture wire in 25 yard [illegible]. They have also a good supply of poultry netting on hand.

ONTARIO MARKETS.

Toronto, March 13, 1903.

WEATHER conditions have been a factor to reckon in making the past week an extremely busy one for jobbers. The trade all over the country has been sending in orders and the delivery at once of many lines, particularly spades and shovels, manure forks, rakes and other farm implements. There has also been a general request for churns, washing machines and wringers. Some of the jobbers as well as some of the manufacturers have been caught short of some lines. The advance in screws, predicted by "Hardware and Metal" last week, took place, the extra 10 per cent. discounts being withdrawn. As the advance in prices in the United States is more than three times the rise here, it is held that further advances will follow here. There are no other alterations in prices. We quote:

BARB WIRE.—A few orders for shipment are coming in, but a general movement is not looked for until the frost is well out of the ground. Base price is as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

COIL SPRING WIRE.—There is not much doing yet, but orders for later delivery are larger than usual. The prices are firm. Our quotations are as follows: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

GALVANIZED WIRE.—A fair trade is doing, but it will be a few weeks before the movement gets well started. The quotations are steady this week, and we quote: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE. There is little doing, and we quote the base price as follows: $2.50 per 100 lb. Oiling, 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—A good movement is recorded. Orders on jobbers' books are quite large. We quote: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hgmilton, London, Gananoque and Montreal.

CUT NAILS.—Trade is steadily picking up. We quote $2.50 per keg.

HORSE NAILS.—Shipments are large for so early, and are expected to continue satisfactory for some time to come. The prices are steady. The discounts are: "C" brand, oval head, 10 and 10 and 7½ per cent.; on "Monarch," 60 per cent. and "Countersunk" head, 60 per cent.; on "Peerless," 15 and 7½ per cent.

HORSESHOES.—Business is better than expected. Our quotations are as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; featherweight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—The advance anticipated went into effect on Monday, the extra 10 per cent. discount being withdrawn. It is possible that further advances may follow, as the rise in the United States market has been much greater than locally noted. Quotations are as follows: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—The demand is satisfactory in every respect and prices are firm as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—The demand has kept up so steadily that trouble has been experienced by some jobbers and manufacturers in meeting their customers wishes. The quotations are unchanged this week. We quote: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—A good business is doing, orders coming in from all directions. Prices are steady. The discount is 45 per cent. and the list price has been reduced $3 per doz. for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—A better movement is reported. The quotations are unchanged this week. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—The heavy movement has started in fully a fortnight earlier than usual, probably in consequence of the fine weather. There are no changes in the discounts, which remain at 60 and 10 per cent.

LAWN MOWERS.—There is very little doing. The prices are firm. We quote: Woodyatt, 12-inch wheels, $7.50; Star, 12-inch wheels, $5.50; Daisy, 12-inch wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

BRASS RODS AND TUBING.—The activity is maintained. Prices are steady. Our quotations are now as follows: Tubing, 3-16, 50c.; ¼, 35c.; 5-16, to 2 in., 28c. Pipe, ¼, 35c.; ⅜, 28c.; ½ to 3 in., 25c.

BUILDING PAPER.—A fairly active demand is noted, with prices firm throughout. We now quote: Dry sheathing, grey or straw, 40c. per roll; tar sheathing, grey or straw, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll.

MILK CAN TRIMMINGS.—The trade in this line has continued extremely satisfactory since the opening of the season. Orders are still coming in from all dairying sections.

SAP SUNDRIES. The demand for sap buckets, spouts, etc., has set in well and orders are of a liberal nature. Prices are steady.

RANGE BOILERS.—The movement continues fairly active. Prices are steady. We quote: 18 and 30 gal., $5.50; 35 gal., follows: 18 and 30 gal., $5.50; 35 gal., $6.50; 40 gal., $7.50; 52 gal., $12.50; 63 gal., $19; 82 gal., $23; 100 gal., $31 and 120 gal., $37.

SCREEN DOORS.—There is no movement yet. Prices are steady. We quote: Screen doors, common, two or three panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT. The demand has assumed an exceptionally large proportions and the prices are firmly maintained. We quote as follows: Canadian Portland, $2.40 to $2.50 and hydraulic, $1.35 per barrel.

METALS

An optimistic feeling prevails. Orders are coming in well from all buying centres and are not confined to any particular lines, though a particularly large trade is recorded in ingot metals, notably, copper, tin and zinc, the advancing markets helping along the sales. The surplus stocks of these goods, as well as of iron, the world over, seem to be lighter than was anticipated, and a bullish feeling is manifested on all markets.

PIG IRON.—There is a strong demand for spot shipment, but there is not a large quantity available. Orders are now being made for later deliveries and it is now apparent that the present high prices will be maintained. One of the largest buyers stated to "Hardware and Metal" this week that he had to pay $2.50 per ton more for his pig iron this season than last, and was afraid that his next purchase might be at higher figures. He is using Scotch pig, which he says is not as strong as the American, but is a good fluid iron, makes a nice surface and when mixed with a Canadian iron makes a good iron. Quotations of $22.50 are still being made for a special grade of Canadian iron for mixing. No. 2 Summerlee is steady at $25 on track, Toronto.

STEEL BOILER PLATES.—A more active demand is noted. Prices are steady at $2 to $2.25, Toronto.

TOOL STEEL.—Prices are firm throughout. A fair demand is reported. We quote: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MILD STEEL.—Prices are well maintained. We quote $1.90 per 100 lb. at Pittsburg and $2.75 per 100 lb. on track, Toronto.

SPRING STEEL.—No change, and we quote $3.50 per 100 lb. on track, Toronto.

BAR IRON.—The demand from all parts of the country is particularly good, and our quotations are as follows: $2.05. For extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—A brisk demand for spot shipment is noted. Prices continue steady. We quote: Common, $3.15 for 28 gauge and dead flat, $2.50 for 26 gauge.

CANADA PLATES.—A fair amount of business is being done. Prices keep firm, both locally and in England. We now quote: All dull, $2.90 to $3; half-polished, $2.85 to $3.10 and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS.—A steady business is doing. Prices are firm, and our quotations are as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—An advance of 75c. per 100 lb. is noted on the local market, in sympathy

with steady advances in the British market. A good business is reported. We quote $33 to $34.

TINPLATES.—Owing to the high price of tin and of pig iron the English tin plate market is manifesting a healthier tone than for some time. This is reflected here and business is freely done at the present prices, which show no change as yet. We quote: Charcoals, $4.75 to $5, and cokes, $4.25 to $4.50 per box.

COPPER.—Prices in both the United States and England have fluctuated considerably, the net change being a considerable advance. Prices here are stiffening, but at the moment show no change. The demand for both ingot and sheet, but particularly the former, is active. We quote: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS.—Unchanged. The discount is 15 per cent.

LEAD.—Both London and New York report advances. Prices are unaltered here with an active movement recorded. We quote $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—The good movement is fairly well maintained. Prices are steady this week. Quotations are now as follows per 100 ft.: Black pipe, ⅛-in., $3.25; ¼-in., $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65; 1-in., $5.20; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $21; 3-in., $25; 3½-in., $32; 4-in., $38.

ZINC SPELTER.—A good movement is recorded. Prices are ½c. higher in consequence of a steadily advancing primary market. We quote 5 to 6c. per lb.

ZINC SHEETS.—A good demand is recorded. An advance of 75c. to $1 is noted by local jobbers. We quote the base price as follows: Cask lots, $6.50 to $7 and part casks, $7 to $7.25.

SOLDER.—A fair amount of business is being done. Prices are stiff, owing to the higher value in tin. Guaranteed half-and-half is quoted at 18 to 19c. and wiping at 17 to 18c.

PETROLEUM.

Prices are unchanged. A fair business is reported. The Union Petroleum Company's prices are quoted as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

HIDES, SKINS AND WOOL.

There is no change in the market of importance this week. There is a fair supply. In wool, London cables report sales yesterday as opening with Thermos and fine cross-breds steady; medium and coarse cross-breds, a halfpenny lower. We now quote:

HIDES.—No. 1 green, 7½c.; No. 2 green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS.—Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.; sheepskins, 80 to 90c.

WOOL.—Unwashed wool, per lb., 8½ to 9c.; fleece wool, 16c.; pulled wools, super., per lb., 15 to 17c.; ditto, extra, 19 to 20c.

TALLOW.—Tallow is very scarce. We quote 5¾ to 6c. per lb.

OLD MATERIAL.

An excellent demand is noted, but the receipts are none too heavy. Light copper, light brass and lead are from ½ to 1c. higher. Other prices are firm. We quote Heavy copper and wire, 10½c. per lb.; light copper 9c. per lb.; heavy red brass, 9½c. per lb.; heavy yellow brass, 7½ to 8½c. per lb.; light brass, 6c.; lead, 2½c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6.00 to $6.50; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

NOVA SCOTIA MARKETS

Halifax, March 10, 1903.

THE hardware trade, which since the beginning of the year has shown signs of activity, has continued so during the last week. This is the month when the usual spring activity sets in, and with a little more favorable weather a large amount of business will be done. Heavy spring orders have been coming in for some time, and the various houses are preparing for the shipment of the same. All the wholesale houses have been getting in their stocks for a very heavy spring and summer trade, and there is every indication that their expectations will be fulfilled. The retail trade has also been doing a good business for some time, and this was continued during the last week. The general activity seems to be fairly well distributed over all lines of goods, though, in the retail, there is more business doing in the special seasonable lines.

There will be a heavy call for building material in Halifax this season, as well as other places throughout the Province. Many new buildings will be erected in the business section, among which will be an extensive one for A. M. Bell & Co., hardwaremen. Their present premises on Water street has been found too small for their growing trade, and they have purchased a desirable property on Granville street, and will build right through from that street to Hollis. The plans show that their premises, when completed, will be the most up-to-date in the city, if not in the Maritime Provinces.

There are no particular changes to note in quotations, except that dealers were notified to-day of an advance of 10 per cent. on screws. All lines of hardware, especially in steel aod iron, are affected by the general firmness in these articles, and in many cases, the old complaint still stands—that manufacturers cannot fill orders promptly. This, no doubt, is a condition which prevails elsewhere.

There is no change in the linseed oil situation. This article is so high, that in some quarters the idea is suggested that machine oils be used in putty. It is the opinion, however, of those versed in these matters, that this will be a very poor substitute, as machine oil has not the "sticking" quality of linseed, and that even within a year the putty will peel off the wood.

The turpentine situation has not cleaned up any, and though, for a time, the wholesale quotation has not changed from 95c., there may still be an advance. One dollar is now the retail quotation. As turpentine is so largely used in the manufacture of varnish and other lines, there will probably be efforts made to use substitutes. In some places these have already been put on the market, and the dealer who wants to handle the real article, may have to be on the lookout for these "just-as-good" substitutes.

MANITOBA MARKETS.

Winnipeg, Man., March 9, 1903.

HARDWARE prices are unchanged. Cement is likely to be short on this market. There is little American to come in, and Ontario may have none to send. It looks as if English cement will be the only reliable source of supply.

RAYMOND BROS., Windsor, Ont.

FOREST CITY GOSSIP.

Office of HARDWARE AND METAL,
365 Richmond St., London, Ont.

ALL branches of hardware and metal manufacturing, as well as every wholesale general hardware house, are busy and a full head of steam on. Some of the manufacturing concerns are unable to keep up with orders for goods made by them. Those who make brass and white metal fittings for baths, taps, gas and electric light fixtures, locks and all builders' hardware report trade as very good. The wire fence makers are all at it "tooth and nail," and one firm, who make fancy brass, iron and wire metal work for banks, offices, churches, hotels, etc., has rather more than it can accomplish in its present quarters, informed your correspondent to-day that it had completed a deal for more commodious premises, which it would occupy in the near future. Reference to this change will be made in a future letter. The business of other manufacturers in London is imperatively demanding more room.

Retail hardware stores in this growing city are now in good running order for spring business. Their windows have an attractive display of graniteware this week, also a varied exhibit of all lines required by the up-to-date, economical housekeeper, who at this season is on the alert for information prior to fixing up for spring.

Some advance in screw nails is the only change that is talked about here. The change in this item will most likely leave out the 10 per cent. usually allowed from the list. The list price will be the same with ordinary discount of 3 per cent. 30 days.

E. Leonard & Sons, of London, have completed, and had tested by the Government boiler inspector, three very large boilers for British Columbia. The extremely stringent laws of that Province required that these boilers should be tested for a working pressure of 120 lb. to the square inch. This company have boilers under construction for Manitoba, and others for New Brunswick. Their engine and boiler departments are both busy.

The real estate men in this city will raise the rental of all property this season. The matter came up before the regular meeting of the Real Estate Owners' Association last week, when this action was decided upon. Members of the Association say that this movement on their part is rendered necessary on account of the continued high taxation, with the added expense of the growing frontage tax system, and the increased cost of buildings and of maintenance. It is confidently expected that the price of residental property will advance as the present cost of construction is much higher.

As in Montreal, Toronto, and other manufacturing cities, an immense Saturday night business is done in the retail shops. A walk along the principal streets on that evening will show busy stores and crowded streets. The thousands of artisans, with wives or sweethearts, are in evidence, as during no other time in the week, making purchases for household requirements, and the hardware retail stores get their share of the crowd.

The writer is pleased to state that the "Forest City" is extremely temperate, drinking is frowned down and the churches are well filled.

THE PULLMAN MFG. COMPANY

The name of The Pullman Sash Balance Company, Rochester, N.Y., has been changed to The Pullman Manufacturing Company. When this company started in business they made but one article, sash balances. Now, however, their business has so extended that they make as large a quantity of several other articles as they do of sash balances, consequently they have decided to change the name, which is more appropriate than the old style.

AGENCY FOR TAPES AND RULES.

Frank H. Scott, manufacturers' agent, 360 Temple Building, Montreal, has been appointed the Canadian representative of James Chesterman & Co., Limited, manufacturers of measuring tapes and rules, Sheffield, England. This will be an important addition to Mr. Scott's lines of cutlery, sterling silver and electro-plated ware, etc. There is no doubt of their receiving a ready reception in Canada. These rules have been a standard for a long time and make their way on any market.

A MAN WHO DID THINGS

MR. THOMAS TAIT, manager of transportation of the Canadian Pacific Railway, whose appointment as chairman of Victoria, Australia, Board of Railway Commissioners at a salary of $15,000 per year, well deserves the position that has come to him. He has been a man who not only did things, but who did them well. Although scarcely 40 years of age, he has for many years held responsible positions in the service of the Canadian Pacific Railway Co. He entered railway service as a clerk in the audit department of the Grand Trunk, in 1881, leaving that company when the Candian Pacific "syndicate" came into existence, to accept the position of private secretary to Sir William Van Horne.

Mr. Thomas Tait.

From the first he made it his business to learn all he possibly could about railway matters and the working of railways in all their details. In this way he fitted himself for advancement, until to-day he has been selected to fill the important position of chairman of the Board of Commissioners who manage the railway system of Victoria.

In 1889 he was appointed assistant superintendent of the Canadian Pacific, with headquarters at Moose Jaw: in 1890 superintendent of the road with headquarters at Toronto, and in 1893 manager of transportation.

The following is a brief statistical summary of the Victoria railway system over which Mr. Tait is to preside:

Miles in operation, 3,237.
Expenditure on capital account, £40,145,404.
Average cost per mile, £12,402.
Revenue from coaching, £1,560,894.
Revenue from goods, £1,711,894
Revenue total, £3,337,797.
Revenue per mile, £1,034
Working expenses—Maintenance £518,456, loco. power £646,192, car repairs £147,153, traffic £609,600, compensation £7,945, general £50,018, total £1,984,790
Net revenue, £1,353,001
Net revenue on total capital cost, 3.37 per cent
Net revenue on total loan moneys expended, 3.64 per cent.
Pensions and gratuities £90,443.
No. of passenger journeys, 54,704,062
Goods tonnage, 3,155,697.
Live stock tonage, 229,163.
Train mileage, 11,066,016.
Total employes, including supernumary, 11,956.
Number of locomotives (16 building), 544.
Number of passenger vehicles, 1,179.
Number of vans, 302.
Number of wagons, 9,392.
Number of miscellaneous vehicles, 227.

Mr. Tait leaves Canada for Australia about May 1, and he goes to the Antipodes with the best wishes of his fellow Canadians, and with none more heartily than those of the business community.

SENSATIONAL RISE IN TIN.

The New York Journal of Commerce of Thursday says: "The first London cable, reporting an advance of £1 2s. 6d. in the price of pig tin, was followed later by another making the price on spot tin £4 higher than at noon, and the English market was reported to be excited. No reason for the advance accompanied either cable, and in the absence of developments here to warrant such a sensational rise the trade was at a loss to account for it. Trade in spot tin on the London Metal Exchange was very heavy, the turnover for the day amounting to 1,050 tons. This was taken here as an indication that the London spot stock is larger than had been previously asserted. In yesterday's movement in London the premium on future tin disappeared and a discount of £1 was established in its place. The New York market responded promptly to the sharp advance on the other side, closing strong at 30.55c. bid and 30.75c. asked for spot, 30.55 to 31c. on March, 30.50 to 31c. on April and 30.40 to 31c. on May. The demand from consumers did not appear to be stimulated by the advance, and the market closed with little business stirring."

PERSONAL MENTION.

Mr. W. S. Fisher, of Emerson & Fisher, wholesale hardware merchants, St. John, N.B., and proprietors of the Enterprise Foundry Co. at Sackville, N.B., paid Toronto a flying visit on Thursday. He was on his way home from a short visit to Atlantic City. Mr. Fisher reported business decidedly good in New Brunswick and that the stove trade of the Enterprise Co. was gradually expanding.

Messrs. Frank J. Taylor, Arthur B. Tisdale and B. Vary, of the Western Fonndry Co., Limited, Wingham, Ont., were in Toronto on Tuesday. Mr. Taylor, who is the president of the company, reports business exceedingly good, and says that the new plant for the manufacture of steel ranges will be in operation in the course of a few weeks. Mr. Vary will have charge of the steel range plant. Mr. Tisdale, as pointed out last week, is a recent addition to the firm's travelling staff.

HARDWARE MERCHANTS' CONVENTION.

THE convention of the hardware section of the Retail Merchants' Association of Canada, which is to be held in Hamilton on Tuesday, March 24, is attracting considerable attention. The meeting will convene at 2 o'clock in the Waldorf Hotel, and, as delegates have been invited from the Province generally, a good attendance is looked for.

The programme will not consist of papers on given subjects, but will be rather a discussion to fix a basis of retail prices for white lead, stoves, shovels and spades, nails and, possibly, some other staple lines. It is hoped that the retailers may be able at this meeting to arrange a scale of prices for them to sell at which would yield them a fair profit. When this basis of prices is fixed, it is proposed to ask the manufacturers of these lines to fix prices absolutely at the basis proposed, so that the supply of any retailer who undersold could be cut off.

The committee who have been taking this matter up in Toronto have arrived at the conclusion that the retail price should be fixed by the manufacturers, but also hold that the retailer has not reason to expect the manufacturers or jobbers to take any action in this respect until a representative body of the retailers decide what they want and request them to take the action desired.

In the evening a general meeting of the merchants of Hamilton will be held, when topics of general interest will be taken up.

On Wednesday a convention of the Retail Merchants' Association (including hardware as well as other branches) will be held. The matters discussed at this meeting will be of a general character, and are likely to be of interest to all retailers. Hardwaremen should lend their support to all efforts such as this to put their trade on a better footing.

DOMINION HARNESSMAKERS.

The Dominion Harnessmakers' Association, which met in Toronto last week, elected the following officers:

President—Chas. Kelly (acclamation).
Vice-Presidents—John Broderick, Henry Dennis, T. H. McKee, A. E. Kirkpatrick.
Treasurer—C. H. Lowe.
Secretary—Alexander Downey.
Auditors—J. B. Mowat, W. J. Micks and H. L. Daville.
Executive — Messrs. Kelly, Downey, Moat, Thompson, Lugsdin and Lowe.

PAINT, OIL AND BRUSH TRADES

SUBSTITUTES FOR LINSEED OIL.

IN view of the present high price of linseed oil, which has lasted at least three years, and shows no signs of material abatement for some time to come, the universal desire for a reliable substitute is becoming every day more urgent, says The Oil and Colorman's Journal, and a large number of such bodies is already on the market, and there is not one of them, if we may believe the sellers, which is not an improvement on that which it is intended to replace. Unfortunately, however, few of them do more than feebly imitate their prototypes, and the vast majority of them dry so slowly, and keep so sticky, that they have no claim to being fit for use, still less to replace either form of linseed oil. It must, however, not be forgotten that a substitute which must, as a necessary condition of being an article of commerce, have a decidedly lower price than the original substance, can never be fully its equal. It must suffice if it possesses the most important properties of the article it imitates in nearly as well developed a form. This is well seen in artificial pigments. Artificial cinnabar, for example, is never the equal of the natural substance in warmth and beauty. The only way in which a perfectly satisfactory solution of the linseed-oil problem can be arrived at is for the progress of chemistry to enable us to make linseed oil itself artificially, and the synthetic product will then hardly be a substitute.

Linseed oil dries, as is well known, by means of oxidation, caused either by the air, or by driers. This property is conspicuous by its absence in most of the known substitutes, which only dry by the evaporation of some solvent, which leaves a residue of solid matter. Hence, only those substitutes which dry to some extent by resinification can be regarded as approaching linseed oil. It happens, too, with the substitutes which leave a solid residue on the evaporation of a solvent, that the solid coat is, as a rule, possessed of very feeble resistance to mechanical and atmospheric attrition. This is especially the case with those substitutes in which the chief ingredient is colophony.

The following are the conditions that must be infilled by a respectable substitute:

1. It must closely resemble linseed oil in color and consistency.

2. Its smell, which must be of necessity different from that of the natural product, must not be disagreeable, and must entirely disappear on drying.

3. It must be miscible with all pigments without lumping or separating, and must also mix with raw or boiled oil without giving rise to any notable amount of sediment.

4. It must dry hard quickly under ordinary conditions, and within 24 hours at the furthest, and without stickiness. It must not turn sticky later, and must give a clear, transparent lustrious coat.

5. The dry coat must not sweat. Petroleum sweats outwardly from boiled oil, and can be wiped away, and sweats inwardly from wood oil, causing the coats to peel off.

6. The dry coat must not rub off, as it does with colophony substitutes, soften, or turn white in damp air, and must resist the weather a reasonable time, which, however, cannot be fixed, as it is variable even with linseed oil itself.

A CONDITION IN GLASS TRADE

EVERY now and then it is discovered that the preferential tariff has had a new affect on Canadian trade conditions. One of the latest is in regard to glass.

At present most of the common window glass used in Canada is imported from Belgium under a duty of 20 per cent. The English window glass imported is practically the product of one large firm, who have a branch house here to handle their business. A paint dealer complains that he is unable to buy glass from this firm at a price which would allow him to handle it profitably, and must bring in the Belgium article instead. The English glass comes in under the preferential tariff, and, it appears, is gradually making its way against the other on this market. Result: the paint men are losing the glass trade. "Even now," says the one referred to above, "we must sell at a price which leaves us no profit in order to compete with the English house."

A letter was sent to Hon. Mr. Fielding, Minister of Finance, on the subject, whose reply was to the effect that the Government could not relieve the situation.

If it is a fact that the paint jobbers cannot import English glass, or obtain it from the English branch in Canada on any suitable terms, which was the statement made to a representative of this paper, then it looks as though one manufacturer could practically have a monopoly of the Canadian market, and the paintmen would have to give up that line of business.

On the other hand, English glass has been regarded by good authorities as equal in quality to the Belgium glass, and even if sold at the same price, Canadians would naturally prefer the former. When it can be sold at a lower price there is a stronger reason for rejoicing that it is taking the place of a foreign product.

But why cannot Canadian paintmen obtain glass from the English house on wholesale terms?

PAINT AND OIL NOTES.

George Graham, president of the Toronto Painters' and Decorators' Union, died at his home last week, after a short illness.

Considerable interest is still being taken in the Raleigh, Ont., oil fields. Oil has been found in some new wells in small quantities.

A. Clawson, who formerly carried on business as painter and decorator in Kamloops, B.C., will reopen in the same line in a few weeks.

Alfred Northcotte, master painter, of Collingwood, Ont., died on Thursday morning last. Heart failure is the supposed cause of death, which was totally unexpected.

The Norwich Broom and Brush Co., which has been organized in Norwich, Ont., to manufacture brushes and brooms, is to receive a bonus of $20,000 from Norwich, and will go on with preparations for the establishment of works at once.

PAINT AND OIL MARKETS

MONTREAL.

THE mild weather has improved business generally in the paint trade, and everybody seems rushed this week. Turpentine has taken no further advance since our last report, and is more steady than for weeks past. Linseed oil is quite firm and shows a tendency to advance. Paris green is moving quite freely and the sale is expected to be much larger than a year ago. Benzine is a little easier than it was last week and is in good demand. The business generally, seems to be better than it was a year ago. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4, $3.65 to $3.75 all f.o.b. Montreal. Terms,

Heavy Paint Consumers

will find "Ark Brand" paint a money-maker.

"Ark Brand" will not chalk for five years, covers the greatest space, is not affected by dampness, is quickly applied and wears the longest.

Besides, those who use "Ark Brand" assume no risk because we make the following guarantee:

Every can of "Ark Brand" paint is guaranteed to give the user perfect satisfaction if used according to directions. If it proves otherwise, we will refund the amount of the purchase price. Dealers will find "Ark Brand" paints meet ready sale at profitable price.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14¼c.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

TORONTO.

There is no change in prices, though turpentine has stiffened materially in New York and Savannah. Linseed oil is weakening in England and New York, owing to the lower quotations on flaxseed. White lead is still in an unsatisfactory condition, prices not being well held to. The movement is excellent, a big call for general sundries being occasioned by the springlike weather. The sale of the staple lines is of a hand-to-mouth nature, however, in consequence of the high prices ruling. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.00 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25 lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 62 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100-lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 95c.; 2 to 3 bbls., 94c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

WINDOW GLASSS.

MONTREAL.

The local market is somewhat quiet and very little business is reported. Travellers say that merchants in the small towns do not seem to be in any rush in buying for the spring trade. The prices remain unchanged. Our quotations are as follows: First break, 50 feet, $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

TORONTO

There has been a liberal movement, but it is not yet large. Prices are firmly maintained throughout. We now quote: Star, Under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

PAINTERS' MEETING.

The Master Painters' and Decorators' Association, of Montreal, held a well attended meeting on Tuesday night. The condition of trade, the outlook for business during the spring and summer, and like topics were brought up for discussion.

ANCHOR LIQUID PAINT

stands first among all others on the market. It is made from the best materials. Will increase your trade. Will please your customers. The white lead used is

BRANDRAM'S B. B. GENUINE—the best in the world.

HENDERSON & POTTS

HALIFAX and MONTREAL

HOLLYWOOD OCHRE

Acknowledged and proven to be the strongest tinting Yellow ever known.

Gives richer tints than Chrome Yellow at one-quarter the cost

Money refunded for every pound that will not bear out our statement.

We control the entire output and base of raw material.

If we were built on lines similar to a Trust we would practically double our price.

Even at that HOLLYWOOD OCHRE would sell in competition with other Ochres and beat out ninety per cent of them.

Compared with French and other Ochres, HOLLYWOOD makes them all look cheap.

When used as a body paint will outwear and outcover any pigment known.

Our plan is to sell HOLLYWOOD OCHRE in the future as we have in the past

At Practically Cost of Manufacture.

We lose no money nor do we make any on HOLLYWOOD OCHRE, but we figure that every dollar's worth sold sells a dollar's worth of other goods.

It is the greatest kind of an advertising medium, not only does it advertise US, but it advertises YOU.

We never had a complaint on HOLLYWOOD OCHRE — nothing but praises.

Read our testimonials We could get a barrel of the same kind.

If you are not already selling HOLLYWOOD OCHRE, write for particulars and prices.

MONTREAL AND TORONTO.

THE LATE GEORGE BOXALL.

FEW of the hardware or stove merchants of Toronto were known to a wider circle of the general public than the late George Boxall, whose death occurred on Thursday, last week, after an illness extending over several weeks. Deceased was born at Onslow, Eng., in 1836, his parents removing to Canada while he was a young child. When 16 years of age he was apprenticed to the tinsmithing, which business he learned thoroughly. When about 23, he, in partnership with his brother John, started in business on Queen street west, opposite Bay street. This partnership was continued until 1872, when he opened out for himself as tinsmith, stove and hardware dealer in the premises on Yonge street, which he occupied until his death. Here he developed a particularly wide connection in tinsmithing work, the demand for his men reaching to all bounds of the city.

The late Mr. Boxall was an idealist in many respects and spent much of his time in public work. He was for many years a member of the public school board; for some time was Grand Treasurer of Dominion Lodge, C.O.O.F.; one of the organizers and leading supporters of the Retail Merchants' Association of Canada. He was, too, a consistent Methodist and an ardent Conservative.

CATALOGUES, CALENDARS, ETC.

SPORTING GOODS CATALOGUE.

John Miller & Sons' 1903 catalogue is bigger and better than ever. It contains over 250 pages, profusely illustrated with engravings of bicycles, bicycle parts, sporting goods of all sorts, paints, and, of course, keys, of which this house is always ready with an immense assortment. The catalogue is a handsome one typographically, and the various lines are numbered, described and indexed in a manner that permits of rapid reference.

CATALOGUES WANTED.

When Aaron Child & Son, hardware merchants, Gravenhurst, Ont., were burned out a few weeks ago, their catalogues and price lists were also consumed. As they have started to rebuild and expect to be in their new store by April 1, they are desirous of having their stock of catalogues and price lists replenished. Manufacturers and wholesalers will, therefore, confer a favor upon them by supplying them with these at their earliest convenience.

J. B. Roy, feed merchant, Beauharnois, Que., has sold out to J. E. Leduc.

CHURCH'S

ALABASTINE.

Returned to Le Prix Courant March 18/03

The little Church on the label of every package.

EVERYBODY wants **ALABASTINE**, and why? Simply because it is PERMANENT and SANITARY; is easily applied, and SELLS ON ITS OWN MERITS. Time spent in trying to sell worthless imitations that have neither proof of origin, nor record of value, is worse than lost.

Buying what won't sell ties up capital, and causes real want for necessaries. **ALABASTINE** WILL SELL, and affords a good per cent. of profit; is a staple in every Hardware and Paint business, as much so as sugar in a grocery store.

ORDER EARLY. Trade lost because you haven't goods in stock, is energy thrown away.

ALABASTINE is made in Canada, by Canadian labor, and from rock taken out of Canadian mines

The trade supplied by Wholesale Hardware and Paint Dealers. Also by

THE ALABASTINE CO., Limited, - - PARIS, ONT.

GLOBE PAINTS

There is more money for the hardware merchant in pushing **Globe Paint** than in any other kind, that is, the quality being equal. For every can of our paint is guaranteed.

The Globe Paint Co., Limited

422-424 Adelaide St. W., Toronto.

PLUMBERS' BANQUET.

On Thursday night, March 5, the Journeymen Plumbers' and Steamfitters' Union of Montreal gave a banquet, which proved a success in every way. Wm. Merrick, of Chicago, the general president of the association, was the guest of the evening. About 400 members, besides the 60 presidents of the various international labor bodies of the city and district, were present. P. Howard, local president, occupied the chair and introduced the speakers. The following toasts were responded to : "The King," "The Trades and Labor Congress of Canada," "Our Guests," "Sister Unions," "The Montreal Trades and Labor Council" and the "Press."

After singing "God Save the King," the chairman introduced W. M. Merrick, who was given an ovation. During the course of his remarks he said he was delighted with his visit to Canada, and was pleased to say that the Montreal union was one of the 350 locals connected with the Amalgamated Association. Addresses were also delivered by about a dozen other gentlemen.

PLUMBING GOODS MARKETS.

As will be seen in our market reports this issue the price of all plumbing goods continues at a high level, the tendency being toward still higher rather than to lower prices, owing to the scarcity and high values of pig iron and the advances in pig lead, tin and copper. It is evident from all reports that both Canada and the United States are to have this year a season of building activity that will equal, if it does not surpass, the briskness of last year. In any case prices are likely to be well maintained.

TORONTO PLUMBERS' ASSOCIATION

THERE is no organization in Toronto that has more reason for congratulation over the success of their efforts in present years than the Toronto Master Plumbers' Association. At the regular meeting of the Association, with President Robert Ross in the chair, Secretary Wm. Adams introduced to the 60 members present five new candidates for membership : Messrs. Parmanter, Gibbs and Phillips, Queen street east ; Earl, Queen street west ; Campbell, Danforth road.

The conference regarding estimating, which has engaged the attention of the Association for several meetings, was continued, but the full details are not yet arranged.

It was decided to hold a banquet at McConkey's on Friday evening, July 20, when the supply houses, architects and other friends of the craft will be invited to unite with the members of the Association in having a royal good time. A strong committee was appointed to ensure the success of the function, with Fred. Armstrong as chairman, Wm. Mansell as secretary, and James Wilson as treasurer.

At a subsequent meeting the committee decided on the following toast list : "The King," proposed by the chairman ; "Canada, Our Home," by W. H. Meredith ; "Sister Associations"; the "Architects," by James Wilson ; "The Manufacturers," by Wm. Mansell ; "The Journeymen," by Fred. Maxwell ; "The Ladies," by Geo. Clapperton, and "The Press."

The names of those who will respond to the various toasts have not yet been chosen but some good speakers are expected.

THE OTTAWA PLUMBING BY-LAW.

A special committee of the Ottawa city council, under the chairmanship of Alderman Askwith, and in company with John McKinley, of the Master Plumbers' Association, Joseph Hurtoboise, representing the journeymen plumbers, M. C. Edey,

architect and S. J. Davis a practical builder, are certainly the Ottawa plumbing by-laws. The by-laws as enacted some [illegible] undoubtedly effective, but [illegible] to be too sweeping in its [illegible] and to impose conditions to [illegible] other classes of builders might readily conform, but which involved [illegible] on the poor. The efforts of the [illegible] at present are in the direction of [illegible] the enactment, so as to make it less oppressive on the poor man or the man of moderate means who wishes to build, and at the same time be [illegible] with the laws of sanitation.

STATE-MADE IRON PIPE.

THE Government of South Australia has for some time owned and operated a plant for the manufacture of cast-iron pipe. This plant, situated at Glanville, has hitherto been equipped for the manufacture of pipes "on the bank" only, and a recent proposal of the Ministry to add a vertical plant then in the market, was defeated by the Legislative Council, says Australian Hardware. The desire of the Government to purchase this secondhand machinery was explained in part by the fact that a quantity of large-sized pipes were early needed, and to prevent any feeling that the ratepayers might be paying too much for State-made mains, it was promised that the contract should be open to private firms.

"Although not allowed to acquire the vertical plant, the Government carried out its intentions in other respects. Tenders for the supply of 9,278 tons of cast iron pipes, comprising 18,000 6 in., 1,000 8 in., 10,000 10 in., and 9,500 12 in. were invited throughout Australia. In response eight tenders were received one from Sydney, three from Melbourne, and four from Adelaide, one of the last mentioned being sent in by the engineer-in-chief on behalf of the Glanville workshops. The amounts and signatories of the other tenders have not been disclosed, but it was announced that the departmental offer of £58,000 (about £6 7s. 9d. per ton) was over £9,000 lower than the lowest private tender."

Municipal ownership has undoubtedly reached a development in Australia that is as yet unthought of here. If it is feasible for a Government to manufacture cast iron pipe, why should it not also make lead pipe and other plumbing materials? Then, why not instal them? Then to reduce the whole matter to the final question, why not let the State do everything and discourage private enterprise and individual genius altogether?

PLUMBING AND HEATING CONTRACTS

In view of the difficulty of getting deliveries of iron pipe from the United States producers, the following extracts from The N. Y. Journal of Commerce of March 6, is interesting:

The Bennett & Wright Co., Limited, Toronto, have the contract for plumbing in two houses on Royalet street for Jas. Thompson, and in a new factory for Ormsby & Co., Queen street east, Toronto.

The plumbing shop of Ogilvie Bros 209a Bleury street, Montreal, was slightly damaged by fire on Friday evening last. The furnace became overheated and caused a small blaze in the basement.

"Somewhat over 1,500 tons of iron pipe were shipped through eastern seaboard points last month. The pipe was manufactured by The National Tube Co. The principal exports went to the Far East and to continental Europe. To China and Japan 511 tons were forwarded."

A. W. Mann, who has until recently been in charge of the sales department of The James Robertson Co., Limited, of Toronto, has severed his connection with that firm to take a similar position with The Stevens Manufacturing Co., London, Ont. Mr. Mann was one of the most popular salesmen in Toronto plumbing circles and will be much missed in that city.

BUILDING NOTES.

THE Ogilvie Milling Co. will call for tenders for the erection of a flour mill and elevator at Fort William, Ont. Plans are now being prepared.

Edmonton, N.W.T., business men will raise $15,000 to secure the location of the C.N.R. shops in that place.

Great activity is predicted in British Columbian lumber camps this season.

The McClary Manufacturing Co., Limited, will largely extend their warehouse in Winnipeg.

The A. McDonald Co. intend erecting an extensive wholesale grocery warehouse on Bannetyne avenue, Winnipeg.

Snider Bros. intend to establsh a brickyard in Portage la Prairie, Man., and will secure a plant for that purpose.

An active building season is predicted for Sault Ste. Marie, Ont., though masons, carpenters and plumbers are to get advances in their wages.

The Ottawa Citizen Co. will erect a $50,000 building in Ottawa as soon as the present building on the site chosen is torn down. E. L. Horwood is the architect.

Sault Ste. Marie, Ont., will shortly vote on by-laws to raise funds to further improve the streets and extend the sewers; also to erect a new high school building.

Stanley, Mills & Co., departmental store, Hamilton, Ont., are to erect a $30,000 store. Architect C. Mills, Hamilton, has prepared the plans, and contractor R. Tope will erect the building.

THE CLAIMS OF B.C. LEAD MINERS.

C. P. Hill, a prominent mining engineer and owner, Nelson, B.C., while in Montreal last week expressed in terse terms the arguments made by the advocates of a higher duty on lead entering the Canadian market. The Canadian market, he admitted, would not be sufficient to comprise the whole of the lead produced by British Columbia, but if it could be kept intact it would be of such material advantage to the industry that they would probably be able to go on until the general conditions of production changed in favor of the miners.

The total lead production of Canada was 50,000 tons, and Canada consumed from 12,000 to 15,000 tons—some of it pig lead, and the rest in manufactured leads—white and red and other lead products.

The markets of Europe and of the Far East were open to Canada, but the country was seriously handicapped by its labor conditions, so far as successful competition in these markets was concerned.

Mr. Hill said the attempt made by the Canadian Pacific to cut into the lead market of the Far East had not been encouraging. From the smelting works at Trail it had endevored to export lead to be used for the manufacture of lead paper for tea; but it had been found that Sir Thomas Lipton, who controls the tea trade, had arranged all the contracts for lead production for the next five or seven years. When these contracts expired Sir Thomas would be willing to receive Canadian lead, but at present lead was used as ballast for the outward voyages of the steamships that brought over the tea.

TO HANDLE GURNEY GOODS.

Ezra McDougall, who for the past seven years has represented the James Smart Co., Brockville, in the territory from Toronto to Sherbrooke, Que., has severed his connection with that company and has joined the staff of The Gurney Foundry Co., Toronto, whom he will represent in Ontario from Niagara Falls to Windsor. Mr. McDougall bears a high reputation in his old field, and will soon be a popular man with his new customers.

The Board of Trade building in Port Arthur was almost entirely destroyed by fire on March 1. The building was owned by J. M. Neelin, whose loss is $6,000, only part of which is covered by insurance.

THE OFFICE

DEVOTED TO THE OFFICE STAFFS OF BUSINESS ESTABLISHMENTS

SYSTEM IN MANAGEMENT.

IT does not follow because there is no apparent disorder in the conduct of a given mercantile or manufacturing concern that therefore the business is systematically, let alone economically, conducted. Indeed, there may be the most pedantic adhesion to rigid rules, and yet an utter lack of that elasticity and adaptation required by a live organization in these days of rapid expansion and of diversified development in methods of trade and industrial processes. No concern can much longer afford to have its books—the records of its business—kept in the unmethodical fashion of a quarter of a century ago, when time was no object, and a man might take a week or a month to find out his financial standing. And while the establishment of an up-to-date "system" may be expensive in its first cost, the resultant saving of labor and time, the accuracy of work and the greater despatch with which results can be learned are well worth it in the end.

It is not enough to exercise economy in the purchase of supplies and to be methodically careful in their distribution. It is absolutely essential that the cost be accurately distributed and credited in ratio to consumption and production, so that at any stage of the latter it may be possible to determine the pro rata of delinquency or efficiency of each department. It is only thus that waste energy, lost motion, duplication of effort can be traced as accurately as waste of material and deterioration of plant. The time has gone by for a happy-go lucky "estimate" of all these items. So narrow is the margin of profit of most production that in many instances it is only the summation of infinitesimal savings in each stage of production that tips the balance to success.

This is perhaps most readily shown in the operation of the "offices," so called. Show me a concern that is still wedded to its huge, old-fashioned bound-leaf ledgers and it would require no great ingenuity or capacity for juggling with fractions to demonstrate an enormous aggregate loss of effort and time in "keeping" these books, which, of course, raises the cost of production and by just so much reduces the ratio of profit. Why put up with this now that loose-leaf books have been perfected and amply tested, so arranged that when a page is completed or an account dead, the page is taken out and put into a transfer, thus relieving the bookkeeper of the necessity of turning over pages without number which are of no more practical value to him? Then there are numerous card systems, all of which have their respective advantages, that can be used to assist in systematizing almost any particular lines of record for the handy, rapid and accurate filing of correspondence, following up of collections, records of names and addresses, loans, mortgages, prices, etc., all effectively interlocked by varied cross-references.

CARE IN ORDERING GOODS.

OUR intention to give practical suggestions to storekeepers for the systematic care of their business is evidently finding favor among subscribers. While the storekeepers themselves will be chiefly benefited, the wholesaler, too, indirectly finds reason for rejoicing, if we are to judge from one or two expressions of their opinion that have reached us. One, such, writes us that nearly half the time and a great deal of its worry could be spared the jobbing house, if their customers were half systematic in their business. "For instance," he says, "orders come in for 'goods same as last,' and dusty files have to be taken down and the time of a clerk spent in going over former orders until the order for this line is found. Of course, the customer does not realize that he is giving this labor. He supposes, probably, that his jobber will recollect his last order, in the same way that he, no doubt, could recollect what kind of a garment he sold Tom Jones for his son months ago. He does not realize that the jobber has 4,000 or 5,000 accounts—half of them impersonal, unfortunately—and those accounts averaging, say, 100 or 200 orders per day. It is past his conception, too, that all this part of the business may scarcely come under the notice of the principals of a firm, but is handled by a staff of clerks, only one or two of whom may have seen this particular order in question at all."

What a saving to the jobber's staff if Mr. Customer could supply the date, even, on which he purchased the line he wishes duplicated, to say nothing of being able to refer to his own invoice and furnish the number and description. The same trouble as this occurs in returning goods.

Most houses, of course, have a rule to refuse returned goods after a certain number of days. But this rule can't be adhered to in practice always, and it is not infrequent to receive a consignment of odds and ends with no information whatever supplied to identify them with the invoice on which they were charged. They may have been returned to the wrong house, for all the consignor or consignee knows of the matter.

Another, writing from the office-view point, says: "There is much to be done along the line of simple instructions to storekeepers in the matter of looking after their accounts." He thinks the instructions will have to be very simple in some cases, some storekeepers not having any instinct whatever for books, as a bookkeeper understands them. He thinks it will be wholesome to stir them up in this matter, however, and he adds that there can be no better medium than a trade paper. Naturally, one cannot complain to his customers of these things for diplomatic reasons, and even so, without being able to offer some suggestion (for which, of course, there is no time), such correspondence would be of little value.

This corsespondent goes on to relate one incident showing a state of chronic neglect of which we were not prepared to hear. His firm had been bombarding a customer about an overdue account of several hundred dollars for some weeks, without eliciting any reply whatever. It was finally decided to send an auditor to investigate, and the customer was duly found next morning chatting in a neighbor's cooper shop, and when the subject of the account was brought up, experienced great pain and surprise at the existence of such an overdue account. This ignorance, of course, was not credited until a pile of unopened letters was discovered on his desk, the accumulation of weeks—the "dunners" among them, grinning with their harmless threats. The customer had the necessary amount in his pocket in good bank bills and the account was settled forthwith.

THE STORE ADVERTISING SCHEME

How it is Viewed by Different Interests.

A VIEW OF THE RETAILERS' SIDE.

By R. F. Evans, Corinth.

IN your editorial headed "Tying the Retailers Hands," you point out some objections to the advertising scheme. Your article is very fair, but you do not say much about the revenue the retailer will derive from this source.

"Sell your waste space" was the cry of the solicitor, and the inducement held out to the retailer was the percentage to be paid over by the manufacturer through the advertising company for the privilege of advertising in his (the retailer's) store.

The advertising rack would be placed in the store, free, by the advertising company, and 50 per cent. of the gross receipts would be handed over to the retailer. The agreement would remain in force from one to five years at the option of the company.

The agent could not say as to how the worth of different stores (as advertising mediums) would be arrived at. The right to place a card in a store in a small village would not be worth so much as the privilege of placing the same card in a large store in the city. Even in the same town you would imagine different stores would be of unequal value as advertising mediums. Would not this advertising concern have a difficulty in satisfying all the partners in the company?

Should not the manufacturer be allowed a free hand in advertising? The storekeeper would retain the right to reject any advertising that would conflict or compete with his interests. What will help the manufacturer in creating a demand for his goods will surely be of benefit to the retailer. Would not such schemes have a tendency to send the manufacturer directly to the consumer with his wares? Many manufacturers from choice now sell directly to the consumer—retailers should not compel other makers to do business in this way.

Your quotation seems to suit the case, and should be considered by every retailer before signing away his rights, viz.: "Is it not better to let well enough alone?"

Corinth, Ont.

A MANUFACTURER'S VIEW.

I am very glad to find that you have taken up the matter of the Store Advertising Scheme, and I think it will bear a good deal more ventilation. Merchants, as a rule, do not understand what kind of a contract they are signing, and I believe that all kinds of representations have been made by canvassers to induce merchants to enter into the arrangement. The dealer is completely tied up as to the advertising matter that may be displayed in his store for the next six years, even though only a single card is displayed, and all the rest left blank he has no option whatever as to the class of advertising that he is compelled to put before his customers. He may be a strong temperance man, but nevertheless he must display whisky advertisements. He may not believe in selling tobacco, but still he must advertise it. He may be pushing bulk teas, and entirely opposed to packages, but still he has to advertise the package teas; all, of course, providing the Store Advertising Company make contracts with the manufacturers of these goods. And as these three are among the most aggressively advertised goods in Canada, some of them, at least, are likely to be represented. Further, dealers often have exclusive rights to some particular line of goods while their competitors are handling another brand of the same class. If only one of these manufacturers should make a contract, then one of the dealers must stop advertising the line he is pushing, and help his competitor across the street by displaying advertisements of his special brand.

White enamel signs have been put up very extensively on shop windows all through Canada; these must all be scraped off unless the firms who put them up make contracts with the company. How many merchants would sign a contract to do this if they understood it? Not one in a hundred would scrape such a sign off after having given permission to put it up.

You will undoubtedly be doing the retail merchants good service if you can prevent them from going any further in this matter, as it is sure to lead to a lot of trouble for them.

St. John, N.B.

P.S. In case you have no copy of the contract, I enclose one herewith.

J. A McGee, president; T. W Horne, vice-president; C. H. Westwood, sec.-treasurer; R. J. McKee, A. F. McLaren, M.P.; W. A. Hart, Sr., chief inspector; M. T. Lester, man.-director.

CANADIAN STORE ADVERTISING ASSOCIATION, LIMITED,

Head office, 52 Bay street, Toronto.

Memorandum of agreement, entered into this day of 190 , between of the first part, and THE CANADIAN STORE ADVERTISING ASSOCIATION of Toronto, Canada, of the second part.

I, the said party of the first part, do hereby agree to lease to THE CANADIAN STORE ADVERTISING ASSOCIATION, of the second part, all the space around the inside of my store, measuring about 20 in. from the ceiling, for advertising purposes, and grant them exclusive rights for same for one year, with option of their renewing same for another five years if they so desire, my remuneration for above privileges to be 50 per cent. of their gross receipts which may accrue from such advertising in or about my store, the same to be paid to me quarterly.

In consideration of the above rights and privileges granted, THE CANADIAN STORE ADVERTISING ASSOCIATION agree that no expense for frames or advertising matter whatever shall be charged to me, "except a fee of $1 per year," and that I shall receive 50 per cent. of their gross receipts for advertisements displayed by them inside or outside of my store.

It is further agreed by me, that in consideration of the payments mentioned above, I do hereby agree not to allow any kind of advertisement whatever to be displayed inside or outside of my premises, except which may be placed there by order of THE CANADIAN ADVERTISING ASSOCIATION, to whom I grant the exclusive right for advertising purpose.

This ageement or contract shall become operative and in force from the day they first begin to display their advertising matter, and I agree to remove all advertisments of whatever kind from my premises when notified by THE CANADIAN ADVERTISING ASSOCIATION.

It is understood that the foregoing conditions do not in any way apply to name, sign or other personal or non-commercial advertising.

In witness whereof the parties hereto have set their hand and seal.

.....

THE CANADIAN STORE ADVERTISING ASSOCIATION, Limited.

Dupl cate. Per,.....

A TRAVELLER'S VIEWS.

I read with considerable interest an article on "Tying the Retailer's Hands," and again the report of a committee appointed by the Retailers' Association of Toronto to investigate the methods of the so-called Canadian Store Advertising Association in your issue of January 30.

During the past few months the writer has come in contact with many grocers and general storekeepers throughout Ontario, a number of whom have signed a contract agreeing to give the above-named association extensive advertising privileges, both inside and out of their stores, for a term of six years. Very few merchants appear to realize just where they stand under this one-sided agreement. Agents of the association have, in many instances, induced the retailer to accept the proposition by employing names of those who

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

have signed or by various promises, which are not, and never were, intended to be embodied in the contract, and are, therefore, not binding upon the association.

I am surprised to find that, upon demand, a fee of $1 has been paid by some who have kindly consented to sign away their advertising privileges. Many have not paid, and are now smiling at those who were so "easy." The most tempting bait handed out by the agents, paid so much per contract to bring in the unsuspecting retailer, is 50 per cent. of the receipts, less the annual assessment of $1 as a slight consideration for allowing the association (1st) exclusive advertising privileges for six years, (2nd) to display any class of advertising they (the association) may happen to have, (3rd) absolutely barring the retailer from displaying any advertising which may be handed in to assist him in selling the goods he may wish to sell surely, a most humiliating state of affairs for the retailer, who may at any time find himself called upon to display a line of advertising entirely foreign to his business and which he would refuse if it was his business to do so. If the retailer wishes to test this point, let him demand that a clause be inserted in his contract giving him the right to reject any advertisements which he may disapprove of (could anything be fairer?) and note the refusal.

A circular letter, issued a few days ago by the association, in one sentence says: "We wish to secure the most desirable advertising first." May I not ask, what is likely to happen if the most desirable advertisers refuse to allow themselves to be used by this Store Advertising Association? Is there not a strong probability of the merchant having to display the least desirable class of advertising?

The C.S.A.A. are certainly not required to consult the wishes of the merchant, for has he not already given them a "free hand?"

I have found many entirely opposed to the scheme and prepared to prevent the agents of the association taking possession of their premises.

To those to whom promises of reward have been made, I would say, if your advertising space is worth what the association agent has estimated it to be worth, why not ask them to guarantee at least one-half the amount, and note their refusal to comply with even this moderate request.

I would say to those who, by one means or another, have been induced to accept the terms of this agreement: Read your contract carefully; notes the clause which reads, "*This contract or agreement to become operative and in force from the date on which they (the said Association) begin to display advertising,*" then decide whether you are prepared to surrender the rights and privileges you now enjoy. If not, the remedy is in your own hands. You must decide for or against this bold attempt at "Tying the Retailers' Hands."

Barrie, Ont.

HARDWARE ASSOCIATION FOR SIMCOE.

Editor HARDWARE AND METAL,—With your permission, I would like to call the attention of the hardwaremen of the County of Simcoe to the idea of forming an association, to be known as the Simcoe County Retail Hardware Association.

I believe this could be done with great benefit to all the hardware dealers in the county. It would bring us in closer relation to one another. It would enable us to form a standard of prices in many staple lines, such as nails, wire and all heavy goods, which are being cut in price to such an extent that in some instances they are being sold below cost.

Associations of this kind are numerous in the United States, and there is no reason why we cannot have them carried on successfully in Canada.

Meetings could be held quarterly, semi-annually, or whenever the association sees fit to do so for their benefit. The expense of the association would be very small to each member if we could have a good membership, which would certainly have to be the case in order to make it a success.

The writer would like to see some of our older hardwaremen take up this question. Yet, hardwaremen are talking it up. I am sure HARDWARE AND METAL will be only too pleased to have any communications published in reference to this matter.

FRED. W. OTTON.

Barrie, Ont., March 9.

[REMARKS: HARDWARE AND METAL gladly throws its columns open for the discussion of the question raised by Mr. Otton. It is to be hoped the trade will take advantage of it. There does not appear to be two sides to the question. An association would undoubtedly be made of great advantage to the hardwaremen in Simcoe county.—The EDITOR.]

A NEW WHOLESALE HOUSE.

Hector Lamontagne, who, until five years ago, was connected with H. Lamontagne & Co., Limited, wholesale saddlery, Notre Dame street, Montreal, has resumed business at 292 St. Paul street, Montreal, under the firm name of Hector Lamontagne & Co. This house will handle the following lines of goods: Leather, harness trimmings, saddlers' and shoemakers' supplies. The saddlery hardware dapartment is under the management of Octave Genereux, which alone assures satisfaction to all purchasers. Other well-known business men connected with this house are: C. A. Labrecque, J. H. Vanier, C. Bonenfant and Henri Labelle. Mr. Lamontagne will be pleased to see any of his old customers when visiting Montreal.

CURRENT MARKET QUOTATIONS.

March 13, 1903

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

AN ATTRACTIVE PROPOSITION.

The progressive dealer who desires to carry a line of plumbing equipment, which owing to its superiority, meets with a quick demand, should communicate with us.

In addition to our line of plumbing equipment, we offer unquestionably the finest line of gas and electric chandeliers ever offered to the trade.

Many hardware dealers have installed our line of steam specialties, and by making the fact known to the manufacturing plants in their immediate locality, have produced big business.

We've a special proposition to make to live dealers

HARDWARE AND METAL

VOL. XV. MONTREAL AND TORONTO, MAROH 21, 1903. NO. 12

COMMENT ON CURRENT TOPICS.

IF Canadians in the British House of Commons keep multiplying in the future as they have in the past they ought soon to hold the balance of power at Westminster. Possibly they might be even sufficiently strong to form a Government. If the giving up of Mr. Tarte will hasten this happy consummation we are ready to do it. But only on the condition that he afterwards returns to us as Governor General.

• • •

The Toronto tailors have struck with a view of mending their financial condition. It is scarcely, however, a stitch in time to save nine.

• • •

Mr. Gamey, the member for Manitoulin, who has created such a furore in the Ontario Legislature, pronounced his name "Gammy," but there are many people who still aver that he is gamey.

• • •

An honest politician should no more fear investigation of his career and actions than a saint the machinations of the devil.

• • •

Hon. J. Israel Tarte says he has been offered a seat in the British House of Commons. Some effectual means must be employed to stop this enticing of Canadians into the British House of Commons. Certain of them it is perhaps just as well to have parted with, but Tarte, who, in the words of the poet, "is so bright and smart," we will under no circumstances surrender to satisfy the greed of a hungry British constituency.

• • •

While Sir Charles Tupper may be dead politically, he certainly is very much alive when it comes to making a speech in regard to the financial enterprises with which he is connected.

It is to be noticed that the consumption of water is on the increase in Toronto. It is not yet determined whether it is due to increase in population or to decrease in consumption of spirituous liquors.

• • •

There may not be a great deal of confession during the investigation of the Gamey charges, but we may expect a good many professions of honesty on the part of the politicians.

• • •

The Cuban Senate last week ratified the Reciprocity treaty with the United States. It yet remains for the Senate of the United States to perform its share in the ratification. The United States Senate, in one respect at least, appears to be characterized by a nature contrary to that which usually obtains among the business men of that country. The latter are prompt, but the Senate is slow, to act.

• • •

A citizen of Algiers has invented a cork barrel. The barrel is, no doubt, intended to hold liquor for light heads, or at least for creating light heads.

• • •

The Turk may be unspeakable, but he is certainly at present causing a great deal of commotion in the Balkan States.

• • •

Eight men fought duels in Paris with swords a few days ago in order to demonstrate the harmlessness of duels. And they demonstrated it almost to perfection. Why not now substitute duels in Anglo Saxon countries in place of the fisticuff encounters? They certainly cause less damage to the participants.

• • •

The Right Hon. Joseph Chamberlain has returned from his mission of conciliation to South Africa, and it is said that about one of the first things that he will do will be to try and pull his party together again. His party has become greatly disorganized during his absence, for although he is not the Premier, he is easily the strongest man in the Cabinet. His task of pulling the party together again, however, is likely to tax his energies and put his abilities to the test, for what has become known as the Fourth Party in the House, led by Winston Churchill, son of the famous Lord Randolph, seems as much bent on earning notoriety for itself as making the position of the Government unpleasant.

• • •

It is evident from the fact that two large confectionery factories in the Maritime Provinces have been burned within the last couple of weeks, that the Fire Fiend has a sweet tongue.

• • •

A Kingston man the other day pounded the ice with the butt end of his gun and the contents of the gun, in turn, pounded his head.

• • •

Having lost its suit against The Gas Company the city of Toronto now proposes to buy out that company. If the city does not manage the gas works any better than it did its case against the company it will be dear, and not cheap, gas that the citizens will get with public ownership.

• • •

Whitaker Wright goes back to England in order that the courts may decide whether he is twright or wrong.

• • •

It is admitted that the present attitude of the Nationalist party in the House of Commons towards the British Government is due to the expectation that a generous measure for the settlement of the Irish land question is forthcoming. If the early days of the 20th century saw the burial of the troubles of Ireland,

which had been ready in the 12th century, we might almost expect the hills to clap their hands for joy.

* * *

The stump speeches which are being delivered in Ottawa are not likely to bear much fruit.

* * *

Incorporated companies whose stocks are liberally diluted with water will probably roll heavily when struck by financial storms.

* * *

Seventy-one warships will be under construction in Great Britain by April 1. John Bull is evidently bent on an extraordinary muscular development of his already famous right arm.

BUSINESS CHANGES.

J. A. Werner, grocer and tinware merchant, York, Ont., is advertising his business for sale.

J. W. Bundy, general merchant, of Walkerton, Ont., has sold out his dry goods business.

The Rat Portage Lumber Co., Limited, have sold their lumber yard at Winnipeg to Alex. Black.

T. A. Metcalfe, agricultural implement merchant, Treherne, has sold out to Coulter & Wellwood.

The assets of the general business of J. A. D. Landriault, Hawkesbury, Ont., are to be sold at auction.

Albert Lawson, agricultural implement merchant, Wetaskiwin, has sold his pump business to G. Erickson.

McArthur & McCubbin, general merchants, Spanish River Station, Ont., have sold out to John Lapointe.

INCORPORATIONS AND CHANGES.

Canadian Factories, Limited, Toronto, have obtained a charter.

Chas. Baker is commencing a tin smith business in Hawkesbury, Ont.

The Dominion Chair and Cabinet Co., Limited, Toronto, have obtained a charter.

The Montreal Belting Co., Montreal, have been registered.

The Robert Hunter Co., Limited, Ottawa, have obtained a charter.

The Martineau Co., iron and metals, of Quebec, have obtained a charter.

The Coronation Gold Mining Co., Limited, Ottawa, have obtained a charter.

The Robert Bell Thresher Co., Limited, Seaforth, Ont., have obtained a charter.

The Dalhousie Lumber Co., Limited, of Dalhousie, N.B., have been incorporated.

The Automatic Short Turn Gear Co., Limited, Toronto, have obtained a charter.

[illegible]on & Co., hardware merchants, Port [illegible] have been succeeded by J. G. Ry[illegible]on, general merchant, of Dover, [illegible]., has removed to James.

H. A. Stephens [illegible] Brush Com- Coe Hill Mines, On[illegible] have ob- Campbellford.

The Norwich Broom and [illegible] pany, Limited, Norwich, Ont., [illegible] tained a charter.

The A. H. Sperry Co., Limited, Greenwood, B.C., hardware merchants, are giving up business.

Ed. Hodgins & Son, general merchants, Shawville, Que., have been succeeded by William Hodgins.

The North Bay Supply Co., Limited, departmental store, North Bay, Ont., have sold their grocery department to J. A. Howse & Co.

Blakeman & Scarth, agricultural implement merchants, Virden, have been succeeded by J. F. McDougal.

The estate of Smith & Pethick, hardware merchants, Wingham, Ont., has been succeeded by W. T. Fishleigh.

Quigley & Ewart, agricultural implement merchants, Indian Head, have been succeeded by George Thompson.

The Virden Lumber and hardware Co., Virden, have been succeeded by The Manitoba Hardware and Lumber Co., Limited.

Greenshaw & Fleming, hardware merchants, Hamiota, have been succeeded by The Manitoba Hardware and Lumber Co., Limited.

PARTNERSHIPS FORMED AND DISSOLVED.

Screaton & Erskine, painters, London, Ont., have dissolved; Screaton retires.

McDonald & Ouimet, contractors, of Montreal, have dissolved partnership.

G. W. West, general merchant, Innisfail, Ont., has admitted his brother as partner.

A. A. Fanning & Co., hardware merchants, Newdale, have dissolved partnership.

Coulter & Wellwood, agricultural implement merchants, Treherne, have dissolved partnership.

J. J. Heaslip, agricultural implement merchant, Alameda, Ont., has opened a branch at Frosbisher.

Quinn & Patterson, hardware merchants, Chatham, Ont., have dissolved, and Patterson and C. A. Gore continue.

Stephens & Douglas, hardware merchants, Chatham, Ont., have admitted David Crombie into partnership, and the style will be Geo. Stephens & Co.

DEATHS.

Otto Laursen, plumber, Vancouver, is dead.

Chas. R. Cole, builder, Windsor, Ont., is dead.

S. S. Fulton, sawmiller, of Fingal, Ont., is dead.

Ebenezer North, cement merchant, London, Ont., is dead.

Patrick Cahill, general merchant, St. Malachi, Que., is dead.

THE CLERGUE INTERESTS.

AT a meeting of stockholders in The Consolidated Lake Superior Co., Limited, held in Philadelphia, Pa., on Tuesday, March 17, a statement of expenditure by the company, under the direction of F. H. Clergue, at Sault Ste. Marie, was presented. It was examined in detail and pronounced satisfactory.

The expenditures, summarized, are as follows :

Iron and steel plants and their accessories, $1,438,300.

Ferro-nickel reduction works at Sault Ste. Marie, $499,700.

Mining properties, $1,082,000.

Transportation interests, $9,482,200.

Two pulp mills, $1,024,000.

Water-power development, Michigan side, $6,423,600.

Water-power development, Canadian side, $953,800.

Sawmills and lumber operations, $268,700.

Tagona water and light plant, $321,000.

Office buildings and other real estate, $296,900.

Materials and supplies on hand, $3,000,000.

Total, $27,700,200.

Chairman Moffly, in commenting on the report, expressed satisfaction. It showed that about $27,000,000 of the $35,000,000 of capital has been expended, and how it has been used. There are still $7,000,000 to $8,000,000 of stock in the treasury.

An explicit denial is given to the rumor that General-Manager Clergue may retire. "There is no truth in that story," said a member of the stockholders' committee.

MONTREAL BUSINESS MEN MEET.

The annual meeting of the Montreal Business Men's League was held on Tuesday, March 17. The inaugurating of a "Canadian Home Week" was discussed, and met the general approval of all. By this the railways would give lower rates to Canadians living in the United States to visit their old homes. The members also showed themselves in favor of placing all electric wires in the city underground. The improvement of the streets also came in for a fair share of discussion. The election of officers resulted as follows :

President—Henry Miles.

Vice-President—Charles Chaput.

Treasurer—J. C. Holden.

Executive Committee—Henry Miles, chairman; Charles Chaput, J. C. Holden, Alex. McFee and F. W. Evans.

Advisory Committee—Hon. J. D. Rolland, Robt. Munro, George Hague, Hon. L. Beaubien, Wm Birks, E. H. Botterell, W. D. Lighthall, C. S. J. Phillips, George T. Bell, C. E. E. Ussher, H. A. Price, T. L. Paton, N. E. Hamilton, A. Lalonde Walter Paul.

Tourists' Information Bureau—Miss E. Maclarlane.

Hon. Auditor—A. F. C. Ross.

Hon. Solicitors—Foster, Martin & Archibald.

Secretary—C. F. Paul.

The Trade-Winning Floor Paint.

The Sherwin-Williams Inside Floor Paint sells rapidly and is so good that it also builds up the dealer's trade in other paints.

It is a particularly durable floor paint—it is made to walk on—it dries over night with a good gloss. It is prepared ready for use in eight shades.

It is the best selling floor paint on the market, because it gives the best result to the consumer and is well advertised. It is a thoroughly good paint that can be pushed with confidence.

If you haven't the product on your shelves, write for prices and information regarding our plans for pushing it to the front. Do it to-day.

A SUBJECT FOR DISCUSSION

THE following resolutions will be submitted at the convention of the Chambers of Commerce of the British Empire, which meets in Montreal next August :

That British capital and emigration be directed more to the colonies rather than to foreign countries.

That the various colonies should undertake to contribute to the expenses of Imperial defence.

That a reciprocal preferential tariff be established within the Empire.

That all treaties between Great Britain and foreign countries should leave Great Britain free to enter into such relations with her colonies and dependencies as might be deemed expedient

The establishment of a fast steamship service between the various ports of the Empire.

The adoption of decimal currency and metric system.

The establishment of intercolonial commercial consuls

Imperial postage system throughout the Empire, not only on letters, but on printed matter and parcels.

In all contracts for public works preference be given to British subjects.

An Imperial Commission to visit all parts of the Empire and prepare a report pointing out the resources of the various portions and how they may best serve the interests of the whole.

That facilities should be arranged whereby news to and from the different parts of the Empire should be transmitted entirely through British channels and not be subject, as at present, to the censorship and influence of foreigners.

That if the large tracts of land to the north of Canada are not at the present time part of the Dominion, or of the Empire, and held with a good title, that steps should at once be taken to have the possession established

The above resolutions will be submitted by the Canadian Manufacturers' Association, who will be represented at the convention by ten of their members, drawn from the various Provinces as far as possible.

TWENTY-FIVE YEARS' SERVICE.

A PLEASANT and rather unusual event in business circles occurred in Montreal on Saturday night, March 14. This was the fete in honor of Prudent Bouthillier, it being the 25th anniversary of his entering the employ of Francois Martineau, hardware merchant, 1381-1383 St. Catherine street.

The affair was arranged without Mr. Bouthillier's knowing anything about it until the very last minute; and much credit is due to Ed. Briere and George Reed, fellow-employes of Mr. Bouthillier, who were the committee to look after the details. The Dionne Hall, 1342 St. Catherine street, was taken for the evening.

Among those who attended to do honor to the guest of the evening were: Francois Martineau, his sons Mederic and Victor, A. S. Piedalue, E. Briere, A. Payette, G. Reed, D. Lachapelle, Chas. Lepage, A. Brouillet, F. Laurence, G. Belair, all in the employ of Mr. Martineau; A. Henault, of Lewis Bros. & Co.; M. Gingras, of the Montreal Rolling Mills; M. Desrochers, of the Canada Hardware Co.; A. Lepage, of McClary & Co.; C. R. McDowell, of McDowell & Co.; H. Lafrance, of St. Eustache, son-in-law of Mr. Bouthillier; H. St. Amour, L. N. Dansereau, E. H. Sentenne, E. R. Dupesne, V. Dufault, L. Dansereau, F. Chartier and J. G. Mousseau.

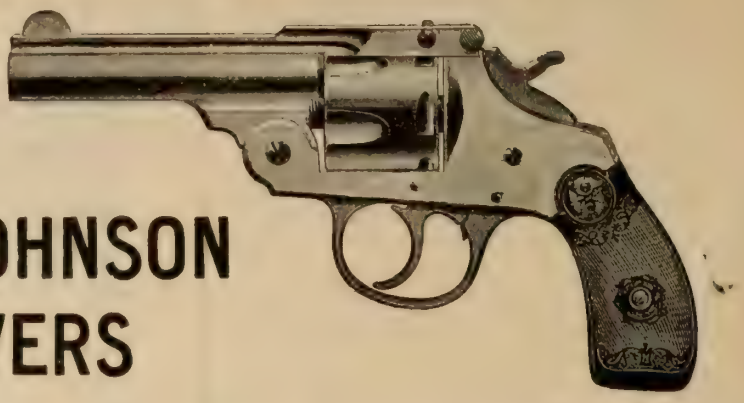
Mr. Bouthillier, hearing of the affair only a short time before, arrived about ten o'clock, and entered the hall amidst the hearty applause of his friends. The proceedings opened with an address read to the guest of the evening by Mr. A. S. Pildalue, on behalf of his confreres. Mr. Bouthillier was presented with a silver tea service and silver smoking set. Although taken utterly by surprise he managed to deliver an appropriate reply.

The toast to the guest being honored, the health of Mr. Frs. Martineau was proposed, and that gentleman replied in a short speech, eulogizing Mr. Bouthillier, and sketching the development of the business. It was commenced in 1870, and at times in their early history a hard struggle was necessary; through 25 years he had had the valuable help of Mr. Bouthillier, and he was overjoyed to have this opportunity of publicly thanking him.

Mr. Mederic Martineau, manager of the business, followed, referring in the most complimentary terms to the probity and integrity of the guest of the evening. Mr. Victor Martineau also spoke.

Before breaking up the evening an excellent repast was served.

AN UNDISPUTED FACT.



IVER JOHNSON REVOLVERS

are absolutely safe; accidental discharge impossible. Millions are in use, all giving perfect satisfaction. The trade prefer them and the public demand them because they are "Honest goods at honest prices."

Vollmar Improved Perfect Washer

It has a most enviable record. A perfection of its kind—will wash more clothes in less time, do it better and easier, with less wear and tear, than any other machine. Prices on application.

COLBORNE, Sept. 10th, 1902,

MESSRS. WORTMAN & WARD MFG. CO., LONDON,

DEAR SIRS,—We have used the washer again and find that further use increased its value to us. The girls are simply delighted with it, as they can do the washing and be presentable for callers if need be.

MRS. R. WEEKS.

The above is a sample of the many kind words said about the Vollmar. (Use the street No. when addressing us.)

The Wortman & Ward Mfg. Co., Limited

No. 1500 William Street, London, Ont.

During the evening the speeches were interspersed with vocal and instrumental selections.

MEETING OF P. E. I. MERCHANTS.

The adjourned annual meeting of the Merchants' Association was held on March 14, and there was a very fair attendance of members. The retiring president, Geo. E. Hughes, read a report of the year's work, and the secretary's report showed that there are now 48 firms members of the Association and it has a small cash balance on hand.

Officers for the ensuing year were elected as follows:

President—George E. Hughes (re-elected).
Vice-President—S. W. Crabbe.

Members of Executive—Chosen from different branches of the trade.—W. A. Stewart, D. L. Hooper, D. A. Bruce, A. A. Alley, Chas. Chandler, Frank Hutcheson, Mark Wright, D. O'M Redin, S. C. Moore.

Among the questions taken up, the insurance rates and fire protection were discussed at length, and the unanimous opinion was that the city council should immediately pass a resolution to the effect that they would authorize the sale of the debentures as soon as the commissioners undertook the work of laying the second main. The cost will be about $20,000, and the revenue to be derived therefrom $500.

Nearly 1,000 immigrants, off the steamer Parisian from England, passed through Montreal en route for the West on Tuesday, and it has been observed that the rush of settlers has started this season much earlier than usual. Three steamers are bringing 1,400 more passengers, chiefly settlers, to Halifax this week.

MACHINERY

ALLOYS FOR BRASS AND BRONZE.

By PERCY LANGMUIR

THE author says: The term gun metal was given to various alloys of copper and tin for the purpose of making ordnance in days bygone, but, although no longer used for that work, the same alloys are exceedingly valuable for art work generally. Triple alloys, that is to say, copper, tin and zinc, have replaced the old double ones—copper and tin only—and in some alloys four or five different metals can be found. Zinc, lead, aluminum and manganese are all employed for specific purposes, and are, therefore, considered in this discussion. The properties of alloys have distinct qualities and range from very hard and rigid to soft and to some extent elastic, and a general grouping includes the sub joined properties: They should be more or less elastic when cast, and have good torsional strength, together with a low melting point and fill the molds sharply. The range in alloys of the kind mentioned is very wide, and most founders have their own formulae, which differ but slightly from those in use by others, but these very differences, minute though they be, have a great effect in some directions upon the character of the work turned out. A low percentage in the use of a deleterious element in the metal for a brass bearing may cause the same to heat badly, and similar alloys for high pressure boiler work may be dangerous. This last should have a composition somewhat as follows: Copper, 86 to 88 per cent.; tin, 8 to 10, and zinc, 2 to 6 per cent. The tensile strength is 12 to 16 tons per square inch of section, with 8 to 14 per cent. elasticity in a length of two inches. This composition is an expensive one, and where the tin is high and the zinc relatively low does not machine well. A composition for a good average quality of metal is made with copper 80 per cent., zinc 10, lead 6, and tin 6 per cent., or a change in quality can be made by using the same proportion of copper and only 5 per cent. of lead and 5 per cent. of tin.

These cast sharp and machine well. Ordinary brass castings usually contain a greater or less proportion of scrap brass; it is usually obtained from dealers and is by no means uniform in quality, and must be sorted and graded carefully. The common proportions of scrap brass are copper, 70 per cent.; lead, 1; tin, 1; and scrap, 18 per cent.; but according to the grade of the scrap, almost any grade of alloy can be produced. The addition of lead, up to a certain point, gives a good color, renders the metal easy to machine, and very much reduces the cost, so it is an inducement to use it as much as possible.

Bearing brasses should have a special composition, much harder than common brass; the following proportions are found to serve the purpose well: Copper, 80 to 82 per cent.; tin, 10 to 14; zinc, 2 to 4. Some use this formula: Copper, 84; tin, 12, and zinc, 4. A cheaper bearing brass is made from copper, 51 per cent.; tin, 8; hard scrap, 41 per cent. To some extent the mixtures just described are being displaced in favor of certain proprietary bronzes and by anti-friction white metals, but there is always occasion for the use of the formulas mentioned previously on standard work.

In preparing alloys of any kind experience and skill are indispensable; in some cases the several metals are melted and cast into ingots, to be subsequently remelted when ready to pour into castings. In the latter operation the copper is melted first and the more volatile metals, tin and zinc, added afterward. For ordinary castings alloys may be used direct or in conjunction with scrap. A charge for a 150-lb. crucible would be 100 lb. of new metal and 50 lb. of scrap. During melting there is always more or less loss by volatilization, oxidization and absorption of gases; these losses should be allowed for in weighing out the charges, but the loss varies in different furnaces, so that it is necessary to standardize the working of the furnace, after which no difficulty will be found in charging for given weights.

The rate of melting is a matter of some importance, the ideal condition being, whether in a reverberatory furnace or crucible, to bring the alloy to a red heat and then quickly reduce the composition to the melting point. Dull, pasty metal, so called, is very liable to absorb gases like a sponge which is liable to spoil the casting, while the reverse is the fact with metal more quickly melted. Alloys high in tin and copper and relatively low in zinc are very sensitive to the conditions above mentioned, and every-day experience in brass founding enforces the importance of the question of temperatures. It will be found that castings melted at low heats show in the fracture that the several metals of which they are composed have separated and crystallized in masses by themselves. Low temperatures when melting often result in cracked castings, the shrinkages and contractions being unequal from the segregation of the component metals.

All alloys suffer from the presence of impurities, some of them when very minute quantities are present, and by absorbing gases from the air which are prejudicial. Oxygen has an affinity for many metals, silver in particular, which will absorb 22 times its bulk of that gas when melting, but gives it up again upon solidifying; steel also dissolves oxygen in melting, but does not part with it again, and it is disseminated through the mass as ferrous oxide unless special means are used to dispel it. Copper acts similarly, as all who have tried to cast pure copper in sand are well aware, but there are many deoxidizing agents which can be used to prevent the difficulty mentioned. Of these charcoal is the most commonly employed; floating on the surface it acts mechanically as a shield against the introduction of air and prevents the absorption of oxygen. Manganese is another agent; in the form of cupro-manganese it combines with oxygen to form oxide of manganese, resulting in slag. Sodium carbonate and potassium nitrate are other deoxidizing agents which can be used with good results, for, in conjunction with charcoal they absorb most of the slag and prolong the life of the crucibles, which are greatly eroded by it. Phosphorus is a very active deoxidizing agent, and is energetic as well, so that very small quantities only must be used, 0.02 per cent being the greatest quantity allowable; the greater part of this will slag out, leaving scarcely a trace in the casting. The effect of arsenic upon copper and brass castings is very noticeable, increasing the tensile strength about 33 per cent., but bismuth is extremely prejudicial to this last quality, as it causes brittleness when present in very minute amounts.

[illegible] exception to the general rule that alloys are more fusible than the [illegible] metal contained. Says Mining World: Aluminum and [illegible] at nearly the same point, which is in the neighborhood of 1,160 degrees F. This alloy does not melt until a temperature of 1,976 degrees is reached. Most alloys are denser than their constituents; this alloy is less dense. Quantities [illegible] 7.07 cubic inches of aluminum, alloyed with 12.07 of antimony, produce [illegible] cubic inches of alloy, thus showing an increase in volume of 4.55 cubic inches, or 24 per cent.

THE AUTOMOBILE FOR TRUCKING

A WIDE diversity of opinion regarding the best power for commercial motor vehicles was expressed at the discussion of that subject at a recent meeting of the Automobile Club of America, in New York, says Iron Age. It was agreed that steam, on account of being a perfectly elastic power, was the most suitable, except for the damger of the water freezing in the winter. E. T. Birdsall told of spending an entire winter's night on the Brooklyn Bridge with the thermometer at 20 deg., endeavoring to warm up the frozen tubes of a steam truck. He thought gasoline would be best, provided competent drivers could be had. The engine should run at a constant speed, so that the driver would have only to change the gears and guide the vehicle.

Some interesting figures regarding the cost of operation of a gasoline truck were given by E. B. Galleher. The truck was of French manufacture and similar to those used in the French army. It was bought by a firm which had been spending $2,700 a year for trucking and cost $2,600. It weighed about 3,500 lb., had four speeds ahead and one reverse, two sets of brakes, and the gears, which were of bronze and steel, were always in mesh. It had solid rubber tires 2½ in. in diameter.

The engine was of 15 h.-p., with four cylinders. In 18 months' service the truck was not once in the repair shop, and the total repairs in that time did not amount to $200. It averaged 25 miles per day, carrying a load of three tons at a rate of 10 miles an hour and climbing a 10 per cent. grade with that load. The truck not only carried a larger load and at a higher speed than a horse drawn truck, but made a saving of over $1,100 a year in the trucking account. It was found that the cost of operation, including the wages of the driver, $2 a day, and gasoline, $1.50 a day, was about $4 a day for 300 working days in the year, making a total of $1,200 on that account. Depreciation was figured at 10 per cent. of the original cost of $2,600, or $260 a year, making a total yearly expense of $1,460 as opposed to $2,700 for the horse trucks.

The operation of the vehicle was so simple that any of the ordinary employes of the firm could run it, the only difficulty occurring when it was necessary to run it at a very slow speed, with frequent stoppages, in which case considerable care was necessary.

Reference was made to the excellent showing of other French commercial automobiles in some recent tests, one of which demonstrated a capacity of 40 ton-miles on a single gallon of gasoline, equal to carrying 5 tons a distance of 8 miles. President Shattuck remarked that this was twice as economical as his big gasoline-touring car, which, with four passengers, weighs 3,000 lb., and runs 13 miles on one gallon of gasoline, an efficiency of 19½ ton-miles.

With gasoline at 15c. a gallon, a capacity of 40 ton-miles means a cost of less than 4-10 per ton-mile. As horse transport has been proved from an experience of five years with 90 two-horse trucks to cost from 14 to 16c. a ton-mile, it is evident that even with a liberal allowance for wages, repairs and depreciation the gasoline truck is much more economical.

MACHINERY AND ELECTRICAL NOTES.

THE Canadian Casualty and Boiler Insurance Co., Toronto, has secured a license to do business in boiler insurance in Ontario. A. C. G. Dinnick is manager of the company.

A 50-light dynamo was purchased by A. Tait, Orillia, Ont., from H. W. Petrie, of Toronto.

A 3 h.-p. vertical engine and three-barrel dough mixer was shipped to T. Dunlop, Orillia, Ont., by H. W. Petrie, of Toronto.

The official announcement of the absorption of the Lachine Hydraulic Company by the Montreal Power Company was made this week.

Work on the additions to the power station, North Victoria, Hamilton, Ont., is well under way. The large boilers from Chicago are now being installed.

An 8 h. p. "Dutton" engine has been installed by The Niagara Construction Co., Niagara Falls, Ont. This engine was furnished by H. W. Petrie, Toronto.

Midland, Ont., has passed a by-law to take over the local electric light system at a cost of $9,600, and to spend $10,400 in extensions of the plant and system.

A. Ankcorn, who for several years has been employed by The Sawyer-Massey Co., Hamilton, has accepted a position with the Brandon, Man., Machine Works Company.

An entire machine shop outfit, consisting of a 24 in.x10 ft. London lathe and Barnes 20 in. drilling machine, portable forges and all necessary supplies, was installed by H. W. Petrie, Toronto, in Penetang, Ont., for L. C. Adams.

The C.P.R. have been using acetylene in the round house at Owen Sound, Ont., but owing to a recent fatal explosion, have attached the piping in the yards and building to the gas company's mains and all the buildings at the company's terminal at Owen Sound, with the exception of elevators A and B, have been lighted with gas. In all probability the dynamo and engine, which now supplies the three or four hundred lights in the elevators, will be replaced by a much more extensive plant, which will replace the gas with electric lights.

The Sturgeon Falls Pulp Company, of Ontario, Canada, is building a large paper mill, after designs by George F. Hardy. The mill will be operated by alternating current induction motors throughout. The variable speed shafts of the paper machines will be driven by two Westinghouse type "F" motors, while various other motors of the same make will be used for driving the machinery which is operated at constant speed.

The following unique method of furnace heating is described by a writer in an exchange: "From the deep access provided for the removal of ashes, I noticed that the Massy grate bars were much wider apart than I had ever seen, and that, although the fire was remarkably glowing and living, the grate bars were comparatively cool, as the fire did not touch them. On inquiring how this came about I found that a quantity of clinkers were built upon the bars and never cleared off. The air rushing in through their interstices caused the full value to be got out of every particle of fuel. The coal used was slack, 12 tons weekly. I may be mistaken, but, I think that system of firing is novel."

MACHINERY FOR SOUTH AFRICA.

United States Consular Agent W. D. Gordon, of Johannesburg, informs the Department, February 7, 1903, that he has received inquiries for machinery for cleaning and preparing for the market corn, tapioca, beans and peanuts, and requests manufacturers in the United States to send him catalogues and data.

AIR MOTORS FOR SOUTH AMERICA.

The Ontario Wind Engine and Pump Co. are favored with another order from South America for one of their air-motors, embracing a complete outfit, including tanks, etc. This is for Cuzco, Peru, and is anticipated to be the beginning of the trade in that quarter of the world. There is no better way of advertising Canada all over the earth than the export of her goods.

THE IRON AND STEEL TARIFF.

(From The Montreal Star.)

After months of work the Canadian Manufacturers' Association has decided upon six points in the revision of the tariff which it is proposed to bring up before the present session of Parliament.

In arranging this proposed tariff touches upon the iron and steel industries, it was necessary to take both the producer and consumer into consideration. The iron and steel manufacturers claim that the present deficiency arises, not so much from want of sympathy at Ottawa, as from the "out of dateness" of the existing tariff which has not kept pace with the recent growth of the iron and steel manufacturing of Sydney, Sault Ste. Marie, New Glasgow and Collingwood.

The encouragement granted the manufacturer of iron and steel in Canada by the Dominion Government is part bounty and part Customs duties. The bounties are as follows:

	From native ore	From foreign ore	On steel.
To April 21, 1902	$3 00	$2 00	$3 00
April 21, 1902, to July 1, 1903	2 70	1 80	2 70
July 1, 1903, to July 1, 1904	2 25	1 50	2 25
July 1, 1904, to July 1, 1905	1 65	1 10	1 65
July 1, 1905, to July 1, 1906	1 05	70	1 05
July 1, 1906, to July 1, 1907	60	40	60

The amount which has been paid as bounty on pig in the past two years is as follows: 1900, $238,000; 1901, $351,259.

The manufacturers now propose that a general tariff be placed on steel and iron, though in no instance has excessive protection been asked. The tariff on pig iron is now $2.50 per ton and it is proposed to ask $3. Steel rails are now admitted free. It is proposed that the tariff be placed at $7 per ton, which, at the present market price, would amount to about 25 per cent. Scrap iron and steel to increase from $1 to $1.50 per ton; iron bars from $7 to $8 per ton; steel billets from $2 to $4 per ton; structural steel $7 per ton, the same as at present, the difference being that it is proposed to widen the present Act, if possible, to include all sizes weighing up to 45 lb. per lineal foot, whereas the present Act only protects up to 35 lb. per lineal foot.

One of the marked changes proposed is in the matter of skelp, which will, if possible, be increased from 5 per cent. ad valorem to $6 per ton. It appears that The Montreal Rolling Mills Co. has skelp mills idle, at present, and at the same time they are importing their skelp from Germany. In other instances pig is being manufactured in Canada, sent to Germany and the skelp returned for consumption in this country. Wire rods are now free, but a duty of $6 per ton will be asked.

A general readjustment of manufactured goods, such as switches, nails, wire, tacks, agricultural implements, engines, and in fact all such finished products, will also be asked—in other words, sufficient will be asked to place the manufacturer where he is at present, using foreign iron and steel for manufacturing purposes as he does to a very large extent.

THE TARIFF AND THE HARDWARE TRADE

Editor "Hardware and Metal."—As the time is approaching for a further consideration of the Customs tariff by the country's representatives at Ottawa, and all our manufacturers in the iron and steel and allied trades are clamoring for tariff revision and consequently more protection, it might not be amiss for one in close touch with this branch of our country's trade to express his views through the medium of your valued columns.

One only needs to glance through the columns of any Canadian trade paper where reliable market quotations for iron and steel manufactures are given, and compare same with the cost of importation of similar goods from Britain and foreign countries, to discover that our Canadian manufacturers are now receiving their full share of protection.

The wire manufacturers at present issue the following trade quotations:

	Per 100 lb.
Galvanized wire, No. 5	$3 70
" No. 6, 7 and 8	3 15
" No. 9	2 55
" No. 10	3 20
" No. 11	3 25
" No. 12	2 65
" No. 13	2 75
" No. 14	3 75

A glance at these quotations will show that Nos. 9, 12 and 13 gauge are quoted much below the other numbers, while as a matter of fact, they are entitled to proportionate figures, but these numbers (9, 12 and 13) being duty free, our manufacturers see fit to arrange their prices to conform to the tariff. Assuming that in so doing (and one cannot very well do otherwise) they are making a margin of profit on the low-priced wire, it is easily seen what an enormous profit they must be making on the higher-priced wire where they have 20 per cent. protection.

Barb wire is another article about which some comment would not be superfluous. The price on barb wire is mutually arranged between our Canadian manufacturers and that giant monopoly, The United States Steel Corporation, who control the wire output of their own country. At present the price of The United States Steel Corporation on this article is as follows:

	Per 100 lb F.O.B. Cleveland.
For home consumption	$2 60
For export to Canada	2 30

And in addition there is a freight tariff arranged from Cleveland to the different Canadian centres whereby our home manufacturers shall benefit of any difference in freight to offset any reduction in profit by meeting the Steel Corporation's prices. Furthermore, it is mutually agreed that the total quantity of barb wire consumed in Canada shall be divided between the home manufacturers and the American octopus to the satisfaction of all concerned. I might here add that The United States Steel Corporation, practically controlling the wire rod output of the world, actually compel our Canadian wire manufacturers to purchase all their wire rods from them, so that in allowing our Canadian mills to make a fair proportion of the trade requirements in wire The United States Steel Corporation make sufficient on the wire rods sold to Canada to compensate them for any loss in profit they may sustain by the reduced exports to Canada of the wire itself. I may also say that the prices herein referred to are arranged between these two monopolies in order to, if possible, prohibit the importation of British and foreign wires to Canada, whereby a profit could be shown to the importer from the latter countries. It must, therefore, appeal to rational and conservative readers that the wire trade at least requires no further protection.

The prevailing duties on wire nails, cut nails, spikes, bolts and nuts, horseshoes, screws, bar iron and steel, and kindred lines, are now so high as to prohibit their importation from any country to be sold at a profit in Canada, consequently it would oot only be unfair to the dealer to place the manufacturer in a position to extort higher prices from the dealer, but it would be an outrage on the consumer as well.

I understand our cement manufacturers, having been unsuccessful in their attempt to get duties increased last year, are to make another desperate effort at the coming session of Parliament, as they are apparently not satisfied with the present protection which varies from 50 to 100 per cent, according to grade. It is an admitted fact that last year our Canadian mills were not able to supply the demand, and the only conclusion one can arrive at is that they want to increase their dividends, which in the past have ranged from 40 per cent. to 100 per cent. per annum, a rather good return for the investor. There can be no doubt that the present year will witness a greater demand for cement than in any past season, and all our Canadian mills will be run to their full capacity.

It may be possible our linseed oil crushers will seek higher protection at the coming session, although, at the present time, they are protected 25 per cent. on simply the crushing of flaxseed, which is the product of our own country. There linseed oil were on the free list, as at the present time they are underselling the English cost of importation fully 10

is no doubt our Canadian seed crushers could get along very comfortably even if per cent. and paying good dividends at that.

I understand the policy of our present Government is to place the Canadian farmer in a position to compete with the rest of the world with his product, and, if such is the case, their first consideration should be to provide him with the requisites of his employment at as low a cost as possible.

This cannot be done by placing unnecessary protection on the iron and steel and kindred trades, as our farmers are the principal consumers, and every dollar added to the cost of their necessities in the production of crops is only increasing the cost thereof, and will ultimately be detrimental to the prosperity of our farming classes, on whose success so much depends.

Our manufacturers were never in a better position than at present, and the extensive increase in home production with higher prices than ever before obtained, larger dividends, and the fact that they are not able in many instances to supply the demand even at their own prices goes to show that any further increase in the tariff would only be giving them a greater monopoly, and adding to their already well-filled pockets at the expense of the very people who require the protection, viz., the farmer and the every day artizan.

Our present revenue is all that could be desired and the country was never so prosperous in all branches of trade as at the present time, and any unnecessary additions to the present tariff in the way of protection to those whose business is already on a very sound basis, will, as I said before, not only be detrimental to the prosperity of the country's main key—the farmer—but will result disastrously to the present Government when the country is again appealed to.

Hardware Merchant

Montreal, March 14.

J. Watterson, 382 Roslyn avenue, Westmount, Montreal.

NAIL QUESTION FROM THE WEST.

Editor "Hardware and Metal": There are rumors and rumors floating about as to the pressure to be brought on the next session of the Dominion Parliament by the iron and steel manufacturers in order to have the tariff raised on the particular industries they represent. This is a question that is of very vital interest to the West. At the present time hardware jobbers find extreme difficulty in getting orders filled. Canadian manufacturers in these lines are not able to cope with the trade, which has enormously developed. There have been many vexatious delays and even actual shortage of supplies all together in some lines. The West is developing very rapidly, and building hardware is in tremendous demand, and perhaps the situation from a western standpoint cannot be made more clear than by a single illustration, that of wire nails.

Last year there came into Canada, for the manufacture of these nails, 10,000 tons of steel rods. Steel and iron manufacturers are asking for a duty of $6 per ton on these rods, which now enter duty free, as raw material. Should this concession be granted, what would it mean to the West? Last year the Western trade absorbed 150,000 kegs of these nails. The proposed tariff would increase the cost 30c. per keg. So that even if the West consumed no more nails than it did last year, its bill for that article would be $45,000 larger. Is it any wonder then that the westerner has no use for higher tariffs? He feels that even the advance just quoted is not the end of the matter. If the iron and steel manufacturers succeed in shutting out the American red men, they will very speedily crush out the present nail industries of Canada. It will be immaterial to them whether they make their profit on the rod or on the nails, and there is small doubt that inside of a few years the wire nails would all be made by them as well as the rods. The present nail makers, being middlemen, would go to the wall and the iron and steel men, secure behind their protective wall, would fix the price of nails to suit themselves.

The very fact that Canadian manufacturers are asking for increased protection at a time when they are not even approaching the supply of the Canadian jobber is an anomaly that the Western consumer, particularly, finds it difficult to understand.

There is not a more live topic with the Western consumer to-day than this question on increasing the tariff, and the remarks of Mr. Brooks at the recent manufacturers' banquet, are being endorsed as "Them's my sentiments, too," by practically every consumer, and more particularly, the farm consumer of the West.

Cable Address { Adscript, London. / Adscript, Canada.

A REASONABLE REQUEST.

THE efforts that the citizens of St. John, N.B., are making to secure the assistance of the Dominion Government in improving the shipping facilities of their port is deserving of the sympathy of the business men in all parts of Canada, whether they are directly interested or not.

It is an old saying that "God helps those who help themselves." The people of St. John have certainly helped themselves. It is less than ten years since the movement to increase the facilities of St. John as a winter port was actively revived. And they have put their hands in their own pockets to the extent of $750,000 for the building of wharves and warehouses. This gave them facilities for the accommodation of about six steamers, but the winter trade of the port has so much increased during the last two or three years that the facilities do not now permit of the accommodation of a larger trade.

The same spirit that actuated the citizens some years ago to provide the facilities they now have is again operating to still further improve them. To meet the growing requirements of the port, they propose building more wharves and warehouses, in order that at least four more ocean steamers may be accommodated. But they ask that the Government shall dredge the harbor in the vicinity of the proposed new wharves, in order that the steamers may be able to lie along side them.

This request, it appears to us, the Government should not hesitate to grant. Being one of the great gateways on the Atlantic Ocean, and particularly for winter traffic, the port is really a national one. Therefore, the country, as a whole, should be interested in the movement that is on foot for increasing its facilities, and none should be more interested than the business men of the Dominion.

THE WEAKNESS OF OUR PUBLIC SCHOOLS.

THERE is scarcely anything that a business man finds more difficulty in getting for his office as young men and women, who are proficient in arithmetic, writing and spelling. Complaints are continually coming to our office of difficulties in this respect.

We boast a good deal about our educational system, but there is certainly something radically wrong when pupils, on passing through the public schools, are so uniformly deficient in the essentials named.

It is a rare thing, indeed, to find a boy or a girl who, on leaving school and entering an office, can be trusted to add up a column of figures, spell correctly or write moderately well. The State is certainly paying enough for its educational system, if the quality of the pupils turned out can be taken as a criterion.

What is the cause? Is it not due to the fact that the minds of the pupils are crowded with a multitude of subjects, many of which are fads and fancies of inspectors and school boards, while the pupils are not getting sufficient opportunity to be thoroughly grounded in the subjects which are the basis of true education? We believe it is this and nothing else, for the boys and girls of Canada are just as intelligent and of just as good material as the boys and girls of any other country in the world.

This is not only a matter for the consideration of educationalists, but of business men as well. And the latter should exercise their influence in their respective municipalities in an effort to bring about a more satisfactory state of affairs.

FREIGHT HANDLERS' STRIKE.

WINNIPEG jobbers thought they had their work cut out for them, to get out spring orders, owing to shortage of cars and motive power, but they find that their difficulties are greater than anticipated.

For the first two days after the strike was declared on the C. P. R. accepted no freight of any kind. Since then very small quantities of freight have been accepted from certain houses, but the general belief is that these goods have not gone out, but are merely stored in the freight sheds. The delay and loss up to the present time has not been serious, but as there is no apparent settlement in sight jobbers are feeling decidedly uneasy.

The first to feel the strain was the fruit and produce men, and they have received no relief up to date.

The railway company will not accept perishable goods of any kind, and this strengthens the belief that the goods accepted are not really going out.

There are anywhere from eight to ten carloads of oranges and lemons awaiting transhipment, and though they have not depreciated so far, there has been serious loss in not being able to fill orders. To-day the first carload of bananas arrived, and if they cannot be gotten out in the next three days they will have to go on the Winnipeg market at slaughter prices. In the meantime people in the country are getting mighty close to a fruit famine.

Whatever the merits of the case may be from the standpoint of the company or the men, it is a most unfortunate circumstance that it should have occurred at this season of the year. Transportation has been a sufficiently knotty problem all winter, and just now, when the returning spring weather promises relief, it is [illegible] to have this blockade occur. Of course the company are making the statement that the strike [illegible] building, and they are receiving freight as usual, but this is merely [illegible]

VALUE OF TOURIST TRADE.

FOR a city with so many attractions for the tourist and, withal, the commercial centre of the Dominion, the hotel accommodation of Montreal is sadly inadequate. For some years this has been obvious to all who have taken an interest in the subject of tourist travel, and now it is forcibly placed before the public by the Business Men's League of the city. In a booklet just published dealing with the League's work during the past year, it is stated that several large conventions have only been prevented from meeting in Montreal on this account. In the winter months this condition of things is not apparent, but from June to October, the season of conventions, and the time when tourists are most numerous, it is impossible to secure suitable accommodation for as large a number as 300. The average convention, especially when it includes many ladies, requires greater accommodation than this.

Boards of Trade in various cities and towns have not only made it their business to exploit the natural beauties of their respective localities, but have also considered it a duty to see that the visitor receives proper attention and service. The Business Men's League will thus perform a good work in drawing attention to the city's defect; and in their endeavor to remedy it they should receive the support of men of business in all lines of trade.

Tourists are good buyers, if direct results of their visit are wanted. But it is not in this way that the greatest benefits to the country are to be derived. Many of those who visit our cities are British people or Americans of wealth, business men, who, while on a pleasure jaunt are yet keenly sensitive to any opportunities for the advancement of their commercial interests that may present themselves. They may either be impressed with the probable value to them of commercial relations with the centres they visit, or they may go away with the feeling that there is little opening there for new business, and little inducement for the investment of capital. It has been the experience in more than one place in Canada that the utilizing of natural resources and the beginning of new industries were the direct results of tourist travel.

It would seem a wise policy, then, to be prepared for tourist travel, providing visitors with ample hotel accommodation of the right kind, and all other conveniences, not forgetting literature such as has been published by the Montreal Business Men's League, directing the stranger to the various points of interest, as well as impressing upon him the importance of the place from a commercial point of view.

ATTRACTING THE LADIES.

AT a meeting of retailers a few days ago a remark was made that is well worthy of being considered carefully and well by all retailers.

"What," said the speaker, "has contributed so materially to the success of the departmental stores? I take it that these stores have recognized the large proportion of the buying that is done by women, and have done their utmost to attract and to win the sympathy of the ladies."

Is not this, to a large degree, actually the case? Any person who would take a walk through any of the departmental stores in our large cities would be at once struck with the large proportion of ladies among the customers. Moreover, an examination of the advertising, window display and the store interior decoration would readily convince one that the departmental stores are making a "dead set" at the affections of the ladies, at least, so far as business is concerned.

The retailer who is in touch with the times has recognized the strength of this feature of retailing, with the result that all classes of stores have improved wonderfully in appearance and attractiveness during the past decade or two.

The hardware store, where shelf goods of every description are indiscriminately piled away without any thought of appearance or orderliness still exists, yet in every town are to be found to-day hardware stores where hardwood shelving, glass show cases, well arranged and nicely displayed stock combine to give to the premises an inviting air of comfort and attractiveness that is a delight to the ladies and a pleasure to the men.

In advertising, too, retailers are more and more recognizing the necessity of making their advertisements attractive in appearance, so that the eye of the average woman, as well as of the average man, will be caught and their interest excited in the goods shown or special prices offered. Several retailers have told the writer within the last year that some of the best pointers they have received for the carrying on of their business have been given them by female members of their family, clerks or customers.

It need hardly be suggested in an article of this nature, addressed to Canadian retailers, that, in order to secure the goodwill of the ladies, courtesy of manner must go hand-in-hand with attractiveness in store interior, window and advertising. The most successful retailers have long since recognized the value of courtesy, and to-day it is probable that there is no more courteous class of people in Canada than the retail merchants. This is as it should be, and, we hope, as it always will be.

THE NEW SENATORS.

SIX senators have been appointed within the past week. Some of the appointments are good and should receive general endorsation. The appointment of Messrs. Frost and Edwards should be particularly gratifying to the business men of the country. Mr. Frost is a well-known manufacturer, and has already had experience in Parliament. Mr. Edwards is a farmer, and greatly interested in the lumber industry, and likewise has had experience in the House of Commons.

In regard to the others, with, perhaps, the one exception of Mr. Curry, the appointments can scarcely be said to be of a particularly gratifying nature. Social influence and wealth were responsible for the appointment of at least two of the new senators, while religion had to do with the appointment of the third. Ability does not appear to have been a factor in their appointment.

There is no reason why all six appointees should not have been men of like calibre with Messrs. Frost and Edwards.

While the Government has now a majority in the Senate, there is no reason why it should not exercise the same discretion in the appointment of senators as it did, on the whole, during the early days of its advent to power.

TRADE OBSERVATIONS

By Rambler.

TO make a hardware window attractive seems to be rather a difficult problem, and for that reason the appearance of the generality of hardware windows is not what it should be. The most of the articles in a hardware store are not at all suitable for window display, so that many changes cannot be made, there being only a few lines of goods that are of use to make a window attractive, and consequently these are being constantly used.

• • •

For a strictly hardware stock, stoves make, perhaps, the best show. Stoves being, however, such cumbersome articles, the generality of windows are unsuitable for the making of such a display; the windows have to be specially designed for such. For a good stove exhibition the floor of the window should be low, not more than a foot or so above the store floor, and should extend back for a considerable distance to give plenty of room for the arrangement of the stoves. It would be as well to have no window floor, that is, no elevated one, if the base of the window were low down. In that case, the display could be so arranged that it would do for an inside as well as a window show; it would look just as well from the outside and would be far more convenient for the inside of the store.

* * *

It is common to see stoves displayed outside, but it seems to me that they take up altogether too much room on the sidewalk to look well, unless the show windows are back of the buildings on either side, in which case an outside display would be appropriate.

• • •

The coal strike last year and the consequent scarcity of coal affected the hardware business considerably, especially in the stove line. Hard coal being such a high price throughout the past winter, a very large amount of soft coal and wood was used as a substitute. Of course, the use of soft coal, in hard coal stoves or furnaces, is the ruination of them. To get over this difficulty seemed hard, and inferior stoves were largely used, and so the demand in that line was considerable. A great many merchants say that what trade they lost in the sale of the high quality of stoves, was amply made-up-for in the sale of these second hand and wood stoves, and in some cases merchants made even more out of them than they would have out of the usual sale of good stoves if coal had been at its common price.

• • •

The demand for gas ranges has been increasing in late times, the price of coal during the winter probably having something to do with it, but not all. They seem to be becoming more popular than formerly, people finding them to be more convenient at all times, and especially during the summer, when the heating can be regulated much more easily in the gas than with coal ranges.

• • •

It is commonly believed among the hardwaremen that if it had not been for the coal strike, the past winter would have been one of the best seasons in the trade that there has been for many years. As it is, business was very fair and most merchants are fairly well satisfied with the results shown at the spring stock taking.

• • •

It is to be hoped for the sake of the fancy cutlery merchants that the coming summer will be warmer and less rainy than last year. The tourist trade, which is usually large in that line, was not good, because touring pleasure-seekers were few and far between on account of the extreme dampness and coolness of the weather. The general cutlery trade makes about the same showing as it generally does about this time of the year.

• • •

In spite of the high price of material and labor, building is going on briskly, and as a consequence, hardwaremen who handle contractors' supplies are well pleased.

• • •

During the last couple of weeks tinsmiths and plumbers have been quite busy, having had considerable repairing of all kinds to do, as well as work on new buildings.

• • •

The sale of skates, hockey sticks and general winter sporting goods has not been up to the mark this season, on account of the very mild and changeable weather.

A NEW RETAIL STORE

A new hardware store is being started in Bowmanville, Ont., by F. M. Souch. Mr. Souch will carry a full line of shelf hardware, tinware, graniteware and paints and oils. He will open his new store about April 1, and was in Toronto this week purchasing his stock. Mr. Souch is well known in Bowmanville having been previously in business there.

INDOOR RIFLE CHAMPIONSHIP.

The greatest event among the indoor rifle competitions in the United States is the one for the indoor championship. This contest has been shot annually for the past seven years, beginning in 1897. The conditions call for 100 shots in series of five to a target, the distance being 75 ft.; position, offhand. This competition brings together many of the best target rifle experts. The competition was held this year in the famous Zettler gallery, New York, and was won for the third time by Louis P. Ittel, of Allegheny, Pa., with a Stevens rifle.

Champion Ittel.

The well-known Stevens rifle is a favorite arm, especially with expert target shots. It is worthy of note that in 1897, 1898, 1899 and 1900 the championship was won with a Stevens rifle, and in 1901, 1902 and 1903 a Stevens rifle with a Stevens-Pope barrel, thus giving to the Stevens rifle a clean record of winning seven consecutive years. Mr. Ittel, in shooting his championship match, used Peters cartridges, and the targets show 100 consecutive bulls-eyes. We publish, for the benefit of our readers, the portrait of Mr. Ittel.

PERSONAL MENTION.

Mr. Walter Grose left Montreal this week for the West. He will go as far as Winnipeg in the interests of the various firms he represents.

Mr. J. Hofmann, Montreal, sales agent for Canada of the American Axe and Tool Co., Coristine Building, Montreal, has been in Toronto a couple of days this week looking up business. Mr. Hofmann, who is an energetic and pushing salesman, is enthusiastic over business prospects.

Mr. Frank H. Scott, Temple Building, Montreal, the Canadian representative of Hawkesworth, Eyre & Co., Limited; James Deakin & Sons, Limited, and James Chesterman & Co., Limited, all of Sheffield, England, left on Wednesday, on a business trip to the Maritime Provinces.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

Montreal, March 20, 1903.

HARDWARE.

THE local hardware market has great while the outside business contin to improved during the past week. as to be very heavy and shows a decid of improvement over last year. Stove pipe wire is being sold for less money in order to meet the foreign prices, and No. 18 is now quoted at $3.75 and No. 19 at $4. Wood tubs and pails have advanced 10 per cent. A few numbers of hat and coat hooks and sad irons have also experienced an advance. Japanned goods, such as latches and door handles, are stronger and are quoted at an advance of 10 per cent. over last week's prices. Ordinary auger bits are higher by about 7 per cent. in the United States and 10 per cent. in Canada. New prices are now being prepared for poultry netting, and an advance may be looked for. The price of shot has also increased and the discount is now 15 per cent. off. Morrill saw sets, Nos. 1 and 3, are 10 per cent. cheaper, and it is claimed that at the present price theye are a good purchase. Hollow ware is very scarce and has been for some time. One wholesale house has just received a shipment, the order having been placed some eight months ago. The price is slightly higher and the discount is 10 per cent. The sale of lawn mowers has been exceptionally heavy and indications point to a much better season than that of 1902.

CANT HOOKS.—The demand for cant hooks is brisk and the prices are firm. Quotations are as follows: No. 12, $10; No. 8, $11.50; No. 8a, $11; No. 2, $12; No. 7a, $16; No. 6a, $14.50; No. 5a, $11.50.

LAWN MOWERS.—There have been several large orders booked during the week. Quotations follow: 10½-in. wheel x 12-in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—Spring shipments are being prepared and show a decided improvement over last year. Prices follow: $2.80 per 100 lb. f.o.b. Montreal; $2.45 f.o.b. Cleveland in carlots of 15 tons, and $2.67½ f.o.b. Cleveland in smaller lots.

GALVANIZED WIRE.—A brisk demand is reported in galvanized wire. Quotations are as follows: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—Orders are being received daily for shipment after navigation opens and the new freight rates take effect. Our quotations are still as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FENCE WIRE.—The prices remain unchanged and a fair trade is reported. The discount is 25 per cent. with the following extras: 1 and 2 lb. hanks, 25c. per 100 lb; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—An advance is daily looked for in brass and copper wire. The discount is 60 per cent.

PRESSED SPIKES.—A good trade is reported at unchanged prices. The discount is 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—The market is firm and a heavy spring trade is looked for. Quotations follow: $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—There is no change in the wire nail market. We quote: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—There is a fair trade doing at last week's prices, which are as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—The demand is good and the market is steady. Prices follow: Iron shoes, light and medium pattern, No. 2 and larger, $3.40; No. 1 and smaller, $3.65; snow pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.55; No. 1 and smaller, $3.80; featherweight, all sizes, 0 to 4, $5.10; toe weight, all sizes, 1 to 4, $6.35. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—A good trade is reported. The discounts follow: Best iron rivets, section carriage, and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—There is a good demand, but the stock on hand is not heavy. The discounts are as follows: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent., machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—A brisk demand is reported at the advanced prices. Quotations are as follows: Round head bright, 82½ per cent.; flat head bright, 82½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—The market shows signs of an improvement and the prices are firm: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 10½c.; single lathyarn, 10c.

BUILDING PAPER.—A fair trade is doing. Prices are: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 55c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—An advance is daily expected in the price of screen wire cloth. The ruling price is $1.40 per 100 square feet.

FIREBRICKS.—The movement is somewhat better than a week ago. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—Business is slow and contractors seem to be in no hurry to start spring work. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

FIRE SHOVELS.—Discounts are: No. 70, 38½ to 40c. per doz.; No. 55, 55 to 60c.; No. 57, 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

COAL HODS.—The season is about closed for coal hods. Quotations are as follows: Japanned, 16-in., $4.50 per doz.; 17-in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

LANTERNS.—The demand for lanterns has fallen off considerably during the last two weeks: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7 per doz.; dash-board, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

SHOT.—The price of shot has been advanced. We quote: Ordinary drop shot, A.A.A. to dust, $6.50 per 108 lb.; chilled,

METALS.

Several advances have taken place in the metal market, and still higher prices are looked for in some lines, such as ingot copper, ingot tin, and pig lead. The price of lead has been advanced and the discount is now 30 per cent. instead of 37½ per cent. Tinplates are also 25c. higher than a week ago. Pig lead continues to go higher and is now quoted at $3.50 for carlots. Solder, zinc spelter and sheet zinc are all reported to be very strong and show a tendency to advance. The foreign market has also advanced the prices on several lines. Canada plates have advanced about 2s. 6d. per ton, terne plates, 6d. per box and tinplates 3d. per box. Copper and pig lead have also been advanced. Ingot copper was quoted at $15.25 yesterday in New York. The trade generally is reported to be brisk and some large orders are booked for shipment immediately after the opening of navigation.

BAR IRON. The supply is limited, but the demand is heavy. We quote as follows: Merchants' bar, $2; horseshoe iron, $2.25 and forged, $2.30.

BLACK SHEETS. The market is firm and a good movement reported at the following prices: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 21 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—An advance is reported in Queen's Head galvanized iron, and the market is quite active. Our quotations follow: No. 28, Queen's Head, $4.50; Apollo, 10¾ oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand, $4.05. For less than caselots 25c extra is charged.

LEAD PIPE. A good movement is experienced and the price has advanced during the week. Quotations follow: Composition and waste, 8c. and ordinary, 7c. The discount is 30 per cent.

IRON PIPE. The prices are unchanged and a fair trade is doing. Quotations are as follows: Standard pipe, per 100 ft., in lengths under 19 ft., Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2-inch, $16.85. Extra heavy pipe, plain ends, are quoted per 100 feet as follows: Black, ½, $4.20; ¾, $5.25; 1-in., $7.55; 1¼, 110.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1-in., $9.55; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—An advance of 25c. is noted in the price of tinplates. We now quote: Coke, $4.25 to $4.50; charcoals, $5 to $5.25.

SOIL PIPE AND FITTINGS.—Inquiries are being received daily and the market is reported as being very firm this week. Discounts are quoted as follows: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8-inch, 45 per cent.

PIG IRON

"CARRON" brand

Scotch Iron.

Best Quality. Prompt Shipment. Low Price.

A. C. LESLIE & CO.

509-512 Merchants Bank Building,

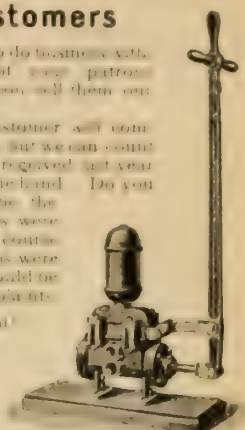
MONTREAL.

Satisfied Customers

are desirable people to do business with. You are sure of every patron being satisfied if you sell them our line of pumps.

A dissatisfied customer will complain very quickly, but we can count all the complaints received last year on the fingers of one hand. Do you think this would be the case if our pumps were not perfect? Of course not. If our pumps were not all right we would be deluged with complaints.

Can you see the moral?



The R. McDOUGALL CO., Limited, GALT, ONT.

Pig Iron

We offer the following brands, to arrive, viz:

No. 1 "SUMMERLEE."
" 1 "GARTSHERRIE."
" 1 "EGLINTON."
" 1 "CARNBROE."
" 1 "MIDDLESBORO'."
" 3 do.

OPEN HEARTH STEEL

THE MARKETS

PIG IRON.—Several orders are in hand and dealers are experiencing some difficulty in filling them. We quote $23.50 to $24.50 ex-store Montreal.

INGOT COPPER.—The price of ingot copper has been further advanced and is now quoted at $15.50 to $15.75 per 100 lb.

INGOT TIN.—The market continues to be firm and the prices are showing a tendency to increase. We quote $33.50 to $33.75 per 100 lb.

PIG LEAD.—A still further advance has been reported in pig lead and the prices this week are as follows: Carlots, $3.50 and less than carlots, $3.75.

STEEL.—There is a brisk demand for all kinds of steel and the market is very steady. We quote as follows: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL.—Several orders are booked for shipment after the opening of navigation and new freight rates take effect. Our quotations are still as follows: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES.—Prices have advanced on the foreign markets, but as yet no change is reported locally. We quote: 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—The market is very firm and is quoted at $7.75.

COIL CHAIN.—The heavy demand for coil chain continues and the prices are steady. Our quotations are as follows: No. 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼-in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75; ¾, $5 to $5.20; ⅞, $3.30; 1-in., $3.15 to $3.25. In carlots an allowance of 10c. is made.

SOLDER.—The market is firm and the movement is fair. We quote: Bar solder, 21c. and wire solder, 19c.

ZINC SPELTER.—An advance of 25c. is noted. We quote $6 to $6.25.

SHEET ZINC.—The business in sheet zinc is quiet. We quote $6.25 to $6.50.

SCRAP METALS.

The local dealers claim that scrap metal is somewhat scarce and is not coming to hand very fast. The copper market is firm, but the demand is weaker than for some time past. Iron is scarce, the price is firm and an advance is expected in the near future. We quote: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50; No. 2, $7.50 per ton; machinery scrap, $17.50 to $18; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

HIDES.

The market is quiet and the prices are unchanged. We quote: No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c. Calfskins, 8 to 10c. and lambskins, 75c.

RAW FURS.

The raw fur market this week has developed no new feature of importance, and prices are unchanged since our last report. Trade is lively, and offerings of furs continue good. Our quotations are as follows:

COIL SPRING WIRE.—A good movement is doing for so early in the season. Prices are steady. Quotations follow: No. 9, $2.75; No. 11, $3.40; No. 12, $2.95. Freight up to 25c. per 100 lb. allowed on 500 lb. or over. Carlots of 15 tons, 5c. less, with freight up to 20c. allowed.

MONTREAL NOTES

An advance is reported in the price of shot.

Cotton rope has been advanced and is now quoted at 15¾c.

Pig lead continues to advance, and is 15c. higher than last week.

ONTARIO MARKETS.

Toronto, March 20, 1903.

HARDWARE.

THE continuance of fine weather has caused an increase of activity and jobbers are getting orders from all parts of the country for speedy delivery of orders booked. Orders are coming in by mail in generous volume, while travellers are all doing a good business. There is a large trade in screws, bolts, tacks; in fact, in all staple lines, as there seems to be a general impression that prices are likely to generally advance. There is no doubt manufacturers in both the United States and Canada have had difficulty in getting supplies of raw materials. There has been a reduction of 7½ per cent. in the discount on both shot and lead pipe, the discount on shot now being 15 per cent. and on lead pipe, 30 per cent.

BARB WIRE.—The movement has increased during the past week and seems to be getting well under way. Prices are firm. The base price is quoted as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE.—The past week has witnessed a material increase in business. The quotations are steady. We quote: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, $4.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—Oiled and annealed have started to move out nicely. Base price is $2.50 per 100 lb. Oiling 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—A good movement is reported here. Prices are firm. We quote: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—There is a better business, particularly in shingle nails. We quote $2.50 per keg.

HORSE NAILS.—There are a few going out, but not a heavy movement by any means. The prices are steady this week. The discounts are quoted as follows: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent. and "Countersunk" head, 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—Trade is rather light. Prices are firm, and quotations are as follows: Iron shoes, No. 2 and larger, light medium and heavy, $3.45; snow shoes,

$3.70; light steel shoes, $3.55; featherweight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—A fairly good business is doing. Prices are firm after the recent advance. Quotations are as follows: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—An excellent trade is doing. Prices are firm, and we quote as follows: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—The demand keeps brisk, particularly on city account, and the quotations are unchanged this week. We quote: Carriage bolts, common (81 list), 50 and 10 per cent.; carriage bolts, full square (82.40 list), 55 and 10 per cent.; carriage bolts, Norway iron (83 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2/3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—Manufacturers are in the position predicted some time ago, of being unable to fill orders as promptly as the trade desire. Retailers and jobbers who have stocks are to be congratulated. Prices are steady. Discount is 45 per cent. and the list price has been reduced $3 per doz. for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—The improvement continues. The quotations are unchanged this week. We quote: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3-cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—The heavy movement noted last week has increased materially, rakes and manure forks being particularly wanted, though the trade is disposed to take deliveries of all goods for which they have placed their orders. There are no changes in the discounts, which remain at 60 and 10 per cent.

CARPENTERS' TOOLS.—There is an excellent demand, particularly for rules, planes, chisels, squares, etc. Prices are stiffening, but no change is yet reported.

LAWN MOWERS.—There is not much movement yet. The prices are firm. We quote as follows: Woodyatt, 12 wheels, $5.50; Daisy, 12 inch wheels, $4.90; Philadelphia, 10 inch wheels, $6; Ontario, 10-inch wheels, $12.75. The other prices are in proportion.

BRASS RODS AND TUBING.—The activity continues. There is no change in prices. Quotations are as follows: Tubing, 3-16, 50c.; ¼, 35c.; 5-16, to 2 in., 28c. Pipe, ¼, 35c.; ⅜, 28c.; ½ to 3 in., 25c.

BUILDING PAPER.—A fairly active demand is noted, with prices firm throughout. We now quote: Dry sheathing, grey or straw, 40c. per roll; tar sheathing, grey or straw, 50c. per roll; dry fibre, 55c. per roll; tarred fibre, 65c. per roll.

MILK CAN TRIMMINGS.—Business is keeping up fairly well. Prices are unchanged.

SAP SPOUTS.—A good movement is reported, the season having got well started.

RANGE BOILERS.—A fairly good movement continues. Prices are steady. We quote: 18 and 30 gal., $5.50; 35 gal., $6.50; 40 gal., $7.50; 52 gal., $12.50; 62 gal., $19; 82 gal., $23; 100 gal., $31 and 120 gal., $37.

SCREEN DOORS.—There is not much doing. Our quotations are as follows: Screen doors, common, two or three panel, walnut stained, 4 in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3 inch style, 20c. per dozen less.

CEMENT.—Business continues to increase. We quote: Canadian Portland, $2.40 to $2.50 and hydraulic, $1.35 per barrel.

METALS.

The market is much steadier than last week as far as prices are concerned. The boom in tin has reached its limit and rather lower quotations are received from England. Pig iron and all lines of steel, except machinery steel, show a stiffening market. Machinery steel, however, is easier here in sympathy with the lower prices in the United States. Pig lead and ingot copper are unchanged, though there has been some fluctuation at primary markets. A good business is doing in practically all lines, with the possible exception of copper, buyers of which are holding off somewhere.

PIG IRON.—There is a growing feeling on the market that the boom in pig iron is about reaching its limit. The production of recent weeks has been so enormous that it is undoubtedly catching up with the demand, and accumulations of stock are reported at southern furnaces. On the other hand, prices in England have stiffened during the past week, as the demand from the Atlantic seaboard has taken much of the surplus production there. Canadian furnaces are still being offered more business than they can handle. There is little No. 1 offering, but No. 2 can be had at $22.50 to $22.75. No. 2 Summerlee continues steady at $25 on track Toronto.

STEEL BOILER PLATES.—An advance of 6c. per 100 lb. has been noted in Pittsburg markets. This would make the quotations $1.96, f.o.b., Toronto.

TOOL STEEL.—There is a good trade doing. Prices are steady. We quote: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MACHINERY STEEL.—Reduction of 20c. per 100 has been noted. This puts the price here at $2 to $2.05 f.o.b. Toronto.

BAR IRON.—There is a good business doing and prices are firm throughout. Our quotations are as follows: $2.05 for extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c.; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—A good demand continues. The market is steady. We quote: Common $3.15 for 28 gauge and dead flat, $3.50 for 26 gauge.

CANADA PLATES.—Business is rather quiet, but prices are reported firm. We quote: All dull, $2.90 to $3; half-polish-

STANDARD.

The cost of Axes per million feet of lumber taken out should be the best Standard. Under this Standard the CROWN JEWEL is the cheapest Axe in the market.

Dundas Axe Works, Dundas, Ont.

W. L. Haldimand, Jr., Eastern Agent, Montreal.

[illegible] $2.85 [illegible] and all night, $3.75 to [illegible].

GALVANIZED SHEETS.—Business is [illegible]. Prices are firm, and [illegible] are as follows: Queen's [illegible], $[illegible] for 28 gauge; American, $[illegible] for 24 gauge; Bell brand, $4.30 for [illegible] gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—A reaction has been reported on the British market from the high price of last week. A moderate reduction is reported early this week, but prices are [illegible] down now. There is no change [illegible]. A good business continues. We quote [illegible] to $31.

TINPLATES.—A fairly good business is doing and a firmer feeling continues to manifest itself. We quote as follows: Charcoals, $4.75 to $5, and cokes, $4.25 to $4.50 per box.

COPPER.—Business has not been as brisk as last week. The buyers are holding off from the higher price, in hope of lower quotations. We quote: Ingot copper, $13 and sheet copper, $22 to $23 per 100 lb.

BRASS.—Unchanged. The discount is 17 per cent.

LEAD.—There is a good demand. Prices are steady here, but an easier feeling is manifested in England. A stronger feeling is noted as a result of an advance of 15c per 100 lb. in lead ore at Leadville, Colorado. We quote as follows: $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—Prices are stiffening throughout. A good trade is doing. Quotations are now as follows per 100 ft.: Black pipe; ⅛ in., $3.25; ¼ in., $2.40; ⅜ in., $2.65; ½ in., $2.85; ¾-in., $3.65; 1-in., $5.20; 1¼-in., $7.35; 1½-in., $8.95; 2-in., $12.55; 2½-in., $21; 3-in., $25; 3½ in., $32; 4-in., $38.

ZINC SPELTER.—Business is so brisk that stocks have been well cleaned up. An advance of ¼c. is noted. We quote 6¼ to 6½c. per lb.

ZINC SHEETS.—A good demand is recorded. The advance is well maintained. We quote the base price as follows: Cask lots, $6.75 to $7 and part casks, $7 to $7.25.

SOLDER.—A fair amount of business is being done. Prices are stiff, owing to the higher value in tin. Guaranteed half-and-half is quoted at 18 to 19c. and wiping at 17 to 18c.

OLD MATERIAL.

A brisk demand is noted. Prices are firm throughout, last week's advance being well maintained. We quote as follows: Heavy copper and wire, 10½c. per lb.; light copper 9c. per lb.; heavy red brass, 9½c. per lb.; heavy yellow brass, 7½ to 8½c. per lb.; light brass, 6c.; lead, 2½c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2 wrought, $4.50; machinery cast scrap, $15.50 to $16; stove plate, $10; malleable and steel, $6.00 to $6.50; old rubbers, 6½c per lb. and country mixed rags, 50c. per 100 lb.

PETROLEUM.

There is no change. We quote: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

Is it worth 10 cents a Day to handle your oil without waste?

Is it worth 10 cents a Day to sell your oil without loss of time and labor?

Is it worth 10 cents a Day to have no leaky, dirty measures and funnels to handle?

Is it worth 10 cents a Day to keep your oil room neat and clean?

We might propound a hundred questions equally as pertinent. If any one of these is worth 10 cents a day, is not the combination of the many worth more than the cost of a **Bowser Self-Measuring Oil Tank,** which will give you all these advantages.

Let us give you full particulars. **Ask for Catalogue "A."**

S. F. BOWSER & CO., Factory— FORT WAYNE, IND.
65 FRONT STREET EAST, TORONTO.

HIDES, SKINS AND WOOL.

The calfskin market is strong and the demand is good. Hides and wool do not make such a good showing. The tallow market is also weak. There is a slight fall in the price of cured hides. Unwashed wool has gone up a little in price, but pulled wool has dropped. We quote

HIDES.—No. 1 green, 7½c.; No. 2 green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS. Veal skins, No. 1, 6 to 11 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.; sheepskins, 80 to 90c.

WOOL.—Unwashed wool, per lb., 8½ to 9c.; fleece wool, 16c.; pulled wools, super., per lb., 15 to 17c.; ditto, extra, 19 to 20c.

TALLOW.—Tallow is very scarce. We quote 5¾ to 6c. per lb.

SEEDS.

Prospects are beginning to look much better now. The warm weather has stimulated the market considerably. The demand for red clover is very good, but there is not so good a run on timothy. Mixed seed has a very fair demand. We quote: Red clover, ex warehouse here, $6.30 to $8; alsike, ex warehouse here, $5.25 to $8.50; Timothy, ex warehouse here, $2 to $2.75.

NOTES

An advance of 25c. is noted in zinc spelter.

Discounts on shot and lead pipe have been reduced 15 per cent.

FOREST CITY GOSSIP.

Office of HARDWARE AND METAL,
365 Richmond St., London, Ont.

BUSINESS in this city coutinues very healthy in every branch of hardware, and the movement of goods made in the factories here is apparently satisfactory. Some complaints are made by the regular wholesale hardware merchants because of slowness of deliveries in goods ordered months ago. One merchant instances a large shipment of fence wire from Cleveland, of which he has invoices for over two weeks, and advice bills of shipment; but as yet no word of the goods at London. The railroads, which seem to be congested with freight from every quarter, are being denounced in strong language, not only by hardware men, but dry goods importers and grocers as well. It is stated that it takes three or four times longer to get freight from New York to London, Ont., than to get the same goods from any part of Britain landed at New York harbor.

Non-receipt of goods, when wanted, is a most serious drawback to all classes of wholesale trade, and especially so to hardwaremen at this season of the year. A spring order for a retail hardware merchant consists of very many different lines, some of which are heavy goods. When these are out of stock, the whole order is delayed so that only one shipment need be made, and thus much irritation and inconvence is caused. Little wonder wholesale men are growling at the weary waiting for railroad delivery of goods.

As your correspondent went through the works of the Waggoner Ladder Company to-day, the words of the Hibernian, "be jabbers! if I had the tools an' knew how, I cud make a watch," occurred to him. It takes the necessary "know how" also to make a ladder. This company was established in 1899 by Mr. Waggoner, who patented the famous extension ladders made by this firm. The works are situated on the southeast corner of York and Colborne streets. Ladders of every conceivable description are manufactured here, and some of them show much inventive genius in their labor-saving construction. Amongst the goods made and sent all over the Dominion are firemen's ladders and wagons for ladders — extension stepladders—ladders for tradesmen and farmers, etc. This firm also make a varied and miscellaneous range of useful articles, such as lawn swings, rocking chairs, clothes-horses, painters' tressels, ironing boards, nearly all having some novel handy device which at once appeals to utility and common sense. This concern is now preparing for their busy season, and the prospects are very good.

The Western Fair, the big fall event of the "Forest City," will be held this year from September 11 to 19. This was decided on at a meeting of directors held Saturday afternoon. Col. Gartshore, the president, was in the chair, and there was a good attendance of members.

Victoria Hospital, where the victims of the great railway accident at Wanstead were brought from the wreck, and so carefully looked after, is receiving some attention from the city; and the hospital trust, with such finances as are available, are endeavoring to bring the institution to a high standing.

The deputation of boards of trade and municipal councils, which was to have waited on General-Manager Hays of the G.T.R. regarding the question of reducing freights and giving an improved passenger service between Toronto and London, has been asked to postpone the conference until April. Manager Hayes writes that he is very busy at present, is perfectly willing to meet the deputation, and does not want to be considered as trying to hedge.

A big effort is being made by Mayor Beck and the city aldermen to keep the rate of taxation kept down to 23 mills the rate of last year, but the high prices for all sorts of material required for public works, together with the [illegible] demanded, and the imperative [illegible] of a large and growing city, [illegible] both aldermen and mayor that their [illegible] are not by any means [illegible].

W. H. L.

THE ROOF

Gets the worst of it.

There's no shelter for it. It shelters the rest from the elements. That's why every one needs the very best shingles.

EASTLAKE SHINGLES

are absolutely fire, lightning, rust and leak proof, and easy to apply.

They've long since been proved the most reliable, perfect and longest-lasting kind to be found.

With them in stock you're certain of satisfied customers and increased business.

NOVA SCOTIA MARKETS

Halifax, March 17, 1903.

IT is seldom that St. Patrick's Day finds the weather in Halifax so fair and mild as it did this year, and this has tended to bring on the spring rush in the hardware trade somewhat earlier than usual. There is a heavy movement of goods, especially to the western section of the Province, where spring opens about two to three weeks earlier than in the eastern section ; and there is also considerable trade from all quarters.

* * *

During the last week the business done, outside the regular spring trade, was in the line of outfitting vessels and their crews. Now that the shore ports are about all open to navigation, the fishermen are fitting out for their season's work, which makes considerable activity in other lines as well as in hardware. New nets, lines, cordage and canvas have, in many cases, to be renewed, and trade in these will be very active for the next two or three weeks. The lobster fishermen are also outfitting. The latter trade is, however, dirtributed over a longer period, as different sections of the Province have different seasons for operating. Prices in lines, cordage and canvass, are firm and higher than usual.

* * *

Builders' hardware constitutes by far the larger portion of the goods being shipped for spring trade. There is also a heavy demand in this line in the city. Besides a number of heavy contracts which were already in operation, a large amount of work will result from the recent fire. Buildings partially destroyed are being repaired, and, as in the case of Moir, Son & Co., new buildings will be erected. This will be a very busy season in the building line in Halifax.

* * *

The turpentine situation is unchanged, the dollar mark still being the retail price, with 5c. less in quantities. Linseed oil is steady at former quotations, and there is considerable demand. There is also a good trade in paints and varnishes, both in large and small quantities, the latter for the householder, who is commencing to do his spring work of brightening up.

* * *

The most important price changes during the last week were an advance of 10 per cent. on screws and a like amount on wire screens The following are the quotations for the lines now most in demand : Wire and cut nails, $2.45 base ; linseed oil, raw, in barrels, 65c.; boiled, 68c.; turpentine, 95c.; white lead, $5.50 for pure and $5.25 for No. 1 ; sheet lead, for 3 lb. or heavier rolls, $4.25 ; pig lead, $3.75 to $4 ; 3-ply roofing, $1.20 ; 2-ply, 95c.; tarred felt, $1.80; tarred sheathing, 45c. and dry, 40c.; manilla cordage, 14c.; British manilla, 12c., and sisal, 11c.; cement, English, $2.75 ; Belgian, $2.40.

R. C. H,

AFTER THE SHUTTERS ARE UP.

ON a side street the other day at noon a large sleighload of hay, in turning a corner, upset. A small boy, on the top, slid off, and after carefully unhitching the horses and tieing them to a tree, began to pull away the hay.

After working industriously for some time, he was asked by a man from a nearby house to come in and have something to eat. The boy refused, but the man feeling pity for the little fellow without his dinner, came out again and asked him to come in, but again the boy shook his head.

"Why won't you come?" said the man. "The hay won't hurt there until you have had something to eat."

"Paw wouldn't like me to," answered the boy.

"Oh! he won't say anything. I'll see he doesn't abuse you for it," assured the man, thinking the boy was troubled with shyness.

After some coaxing, the boy, somewhat reluctantly yielded and went in. After eating a hearty dinner and sitting a few moments beside the heater, he got up with a sigh of resignation and began to slowly put on his mitts.

"Now," said the man, having, as he thought, dispelled the boy's shyness, "why did you think your father would object to your coming in to dinner?"

"Well, you see," answered the boy, as he opened the front door, "he's out there under the load."

THE HARDWARE CONVENTION.

The preparations for the hardware convention at Hamilton on Tuesday next, March 24, are practically completed. General Secretary Trowern states that the indications are that the meeting will be one of great practical advantage to hardware dealers, as the topics to be discussed are live issues, and a free discussion is likely to result in finding out what steps should be taken to get at a remedy for any wrongs which the retailers think should be righted.

THE PRESIDENT'S DINNER.

A dinner given last Monday evening at the St. James Club, Montreal, by Arthur J. Hodgson, president of the Board of Trade of that city, proved a most enjoyable function. Among those present included the members of the present council, the past officers of the Board, with whom the host had served; the president of the Chamber de Commerce, and James Crathern, the Board's representative on the Harbor Commission. Others present were: George E. Drummond, 1st vice-president; W. I. Gear, 2nd vice-president; Ald. Ames, R. M. Ballantyne, George B. Fraser, E. F. Hebden, Charles Meredith, James Thom, Hugh Watson, W. W. Watson, John T. Wilson, Charles F. Smith, Henry Miles, Alex. McFee, D. Mason, Fred. W. Evans, R. W. Macdougall, John Macfarlane, Robert Munro, A. Browning, J. B. Bell, George Hadrill, secretary of the Board of Trade, and J. Stanley Cook, assistant secretary.

CATALOGUES, CALENDARS, ETC.

Catalogues and circulars of plumbers' and builders' supplies are wanted by A. Belanger, Montmagny, Que. Will manufacturers and wholesalers kindly bear this in mind?

We are in receipt of this year's calendar from Blackhall & Co., advertising signs and novelties, Front street west, Toronto. It is a very neat little calandar. It is printed in three colors, black, white and silver. The silver is used in the firm's name, which shows up well against the black background; also the contrast between the two extreme colors gives a striking effect to the general appearance.

BRIGHT OUTLOOK FOR BATTLEFORD.

Battleford, N.W.T., expects to experience quite a marked change during the present year. In that neighborhood quite a number of settlers from Nebraska and Dakota are taking up farms, and Mr. Barr's Bristol colony of 3,000 people are due to arrive there in about a month. Besides this, the Canadian Northern is surveyed to pass within two miles of the town on the opposite side of the Saskatchewan river, while the C.P.R. extension from Elkhorn or Moosomin to Edmonton will also strike the town. There are at present three large stores in the town, and a fourth is just starting. Their constituency covers a radius of about 90 miles. When the railway connection with the outside world is assured, Battleford promises to assume a much more important position as a commercial centre than it now does.

A GOOD APPOINTMENT.

W. F. Millman & Sons, 37 Yonge street, Toronto, have been appointed eastern buyers for the Trites Wood Co., Limited, Fernie, B. C., the firm which recently bought out all of the Crows Nest Pass Coal Co.'s stores including Michel Coal Creek and Morrissy. Their head office is at Fernie, where they have another large store lately owned by A. B. Trites.

Mr C. F. Fawcett, hardware merchant Tiverton, Ont., was in Toronto this week, and paid HARDWARE AND METAL a visit.

CONDENSED OR "WANT" ADVERTISEMENTS.

PAINT, OIL AND BRUSH TRADES

VARNISH QUALITIES AND EFFECTS.

All persons are familiar with the effects when a coat of varnish has been put on a colored surface previously dulled. It brings out the richness and purity of the colors over which it is put. It creates fancies in them which one is inclined to think did not before exist.

But varnish adds nothing to colors. It merely removes the obscurities which hide their beauties, in just the same way that the process of polishing a precious stone or a piece of wood by friction shows out the beauties of its veins and colors. Dullness is identical with roughness, and transparency is merely a high degree of smoothness. The effect of varnish is simply to provide a color with an almost absolutely smooth surface.

There is nothing so favorable to beauty as this quality of glossy transparency. The reason why dull surfaces are never rich in color seems to be that the minute roughnesses and depressions which form such surfaces break the rays of light into points of light and shade which obscure the true colors beneath. When the surface is smooth to the extent of transparency the light passes unimpeded direct to the colors, which are then reflected back in their proper values.

In decoration, however, roughness has qualities peculiar to itself. When viewed from a distance it has a suggestion of softness which makes it particularly suitable for some forms of work where brilliancy is not aimed at, as, for instance, on large inside surfares, where a retiring effect is desired. Gilding is also sometimes finished dull or "mat," the object in this case being variety or to show to better advantage a burnished surface.

Besides adding beauty to an object, a glossy or polished surface has the additional advantage of rendering it better able to resist the effects of atmospheric influences. Frost, rain, the heat of the sun and climatic changes of all descriptions play havoc with surfaces in exposed positions. Wood, unprotected, soon starts to decay on its outer surface; metals rust or corrode, but the smooth, compact surface of varnish for a long period offers a splendid resistance.

It will, therefore, easily be understood that the true test of the value of varnish is that it should retain its original surface intact for as long a period as possible. In short, durability, particularly in carriage varnish, where delicate and expensive colors are to be protected, is the most important feature. As soon as the varnish starts to go wrong the colors beneath it lose their best qualities.

Some varnishes are used in such unexposed positions that the quality of hard drying is the all important consideration, and the tough, elastic wearing qualities of outside varnish are not required. Spirit, furniture and such like varnishes are especially prepared for inside conditions. Their hard surfaces render them safe to handle, but they would very soon perish if exposed.

A quick drying varnish can never be classed as durable. The process of drying is identical in all respects with that of perishing. The same influences which, acting upon a varnish cause it to dry, continue to act upon it and cause it to decay. The process of drying, in fact, never ceases until all but the original solid matter in it has disappeared. A slow drying, elastic varnish is, therefore, the most durable attainable.

PAINT AND OIL NOTES.

J. Marshall has been elected president of the Toronto Painters' Union.

Brantford, Ont., union painters have talked of going on strike for a raise this spring, but have been advised not to do so by the international executive.

A DEMAND FOR HIGHER WAGES.

The Montreal Brotherhood of Painters, Decorators and Paperhangers have demanded after April 1, 25c. per hour; eight hours per day; overtime, 37½c.; Sundays and after midnight, 50c.; travelling expenses, board, etc., for work outside Montreal; recognition of union; arbitration in case of dispute. The Master Painters' Association have written the secretary of the union that the matter will be fully considered. No serious trouble is anticipated.

NEW LINSEED OIL MILL.

The contracts were awarded on Saturday for the Ontario Linseed oil Mill. David Chalmers will construct the foundations and walls, Alex. Green will do the carpenter work and H. R. Manders & Co. have the contract for the sheet iron work. It is a very extensive contract, but must be completed before September 1 of this year. The laying of the foundations will be costly, and it will be necessary to sheet pile the excavations and at the same time keep a steam pump almost constantly in operation for about six weeks. The nature of the ground, which was at one time a marsh, makes this work necessary. Mr. Chalmers is commencing on his part of the contract this week.—Owen Sound, Ont., Sun, March 12.

PAINT AND TIN CAN RUST

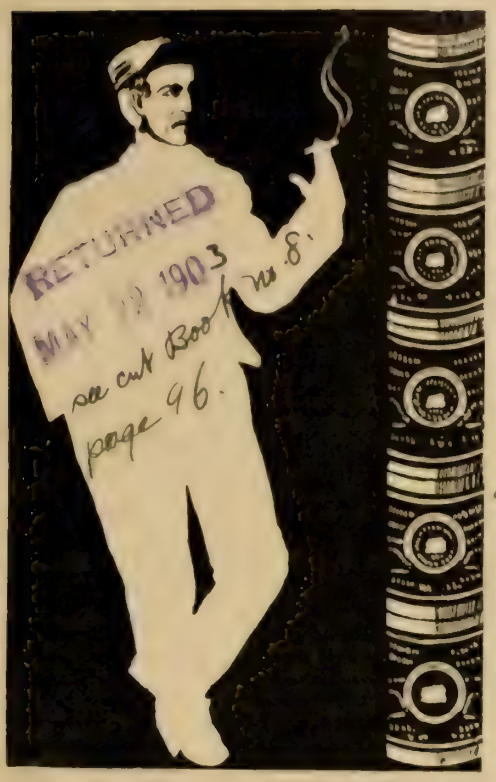
It has long since been determined by scientific researches that linseed or any other oil is not impervious to water; on the contrary, that they soak up water almost like a sponge, hence some other preparations are required to protect metal from rust in the presence of water, says The Painters' Magazine. We should recommend that the cans be first thoroughly cleansed, to remove all grease, etc., with soda water, then rinsed and thoroughly dried. Now, a thin coat of equal parts of white lead and zinc, thinned with turpentine and a little coach japan, to which good varnish—say, a tablespoonful to each half-pint of paint—is added, should be given, and when this is dry a coat of enamel, made from zinc in damar varnish, colored to suit fancy, thinned with a little turpentine and mixed with sufficient hard drying coach varnish to work freely, applied as a finish. If each coat could be conveniently baked from four to six hours at a temperature of about 150 deg. F., it would resist water far better than the air-dried paint.

PAINT AND OIL MARKETS.

MONTREAL.

THE white lead market shows indications of an advance and has given the demand for this staple a strong lift up. Dry white lead has advanced nearly £3 since November last, and this cannot fail but to have a marked effect on the ground article. All quotations are sent out subject to quick reply and, with the present good feeling in the general trade, the advance, which is bound to take place shortly, will be paid cheerfully. It looks as if the stock for spring supplies will be thinned out by the opening of navigation. All lead products are feeling stronger and no concessions are being made in round lots. Varnish manufacturers are somewhat hampered by the scarcity of turpentine, and an advance in prices is talked of. The trade generally, is reported to be good. We quote:

GROUND WHITE LEAD.—Best brands, Government standard, $5.00 to $5.25; No. 1, $4.27½ to $4.87½; No. 2, $4.40 to $4.50; No. 3, $4.02½ to $4.12½; No. 4,



Labor, Not Paint,

is the Expensive Item in Painting

It costs as much to apply a poor paint as a good one.

Your customer knows this—that's why he wants the best paint—why he wants "Ark Brand," the most durable and satisfactory paint ever sold.

Dealers find "Ark Brand" a splendid line to carry, because it makes satisfied customers, which means continued patronage.

Here's a straw showing the satisfaction "Ark Brand" paints are giving.

Tweed, January 9, 1901.

The Francis-Frost Co., Limited.

GENTLEMEN,—I have used your "Ark Brand" Paint for some years and find it satisfactory in every way. I have used it for both inside and outside work. I painted several houses outside and find it to stand the weather well. I believe better than white lead, as it keeps its gloss and does not crack nor peel off. While other paints are being condemned our "Ark Brand" is steadily growing in favor with the people, going on from victory to victory. WILBER GORDON

CAN WE NOT PLACE YOU IN THE VICTORIOUS LINE?

—

TORONTO.

The mild weather has greatly accelerated the movement, retailers calling for immediate delivery of all lines. The number of orders coming in are also large, covering practically every line in the range of paints, oils and sundries. Paris green is the least active, though the high price of turpentine and linseed oil is retarding sales somewhat. The stiffening of the lead market has caused a feeling that white lead may go higher, but as competition in this line is extremely keen, this advance may be delayed. Linseed oil is easy in England, but there is no weakness shown here. Turpentine is firm, as are nearly all lines. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.00 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25 lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.50; ditto, in kegs of 100 lb., $5; No. 1, in casks of 560 lb., $3.75; ditto, in kegs of 100 lb., $4.25.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In 5-gallon lots, 50 to 75c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb.; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c. per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.25 to $2.35; white, $2.35 to $2.45 per gal.; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8½c. per lb.; cabinet glue, in bbls., 12c.; emery glue, in bbls., 17½c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100-lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 14c. per lb.; arsenic kegs, 14½c.: 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. packages, 16c.; ½-lb. packages, 18c.; 1-lb. tins, 16c.; ½-lb. 18c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 9 to 9½c. per lb., and 10 to 10½c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 95c.; 2 to 3 bbls., 94c. delivered. Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

GASOLINE AND BENZINE.—We quote as follows: Benzine, 19¼c. and gasoline, ordinary, 21¼c. and engine, 22¼c. f.o.b. Toronto.

HALIFAX and MONTREAL

UN-FAY-DING TUSCAN RED

IN 1897 HOLLYWOOD OCHRE was introduced to the buyers of Paint. Five tons were sold the first year. Last year the sales amounted to three hundred tons. Why the increase? The answer is easy—the painters and consumers wanted just such an Ochre.

There is just such a demand for a Tuscan Red, and the market to-day is flooded with just such a miscellaneous lot of rubbish, dubbed Tuscan Red, as the Ochre market was with rubbish Ochre.

You know without our telling you that there is nothing more beautiful as a trimmer and body color than a rich Tuscan, but we all know that the richness becomes a part of the atmosphere in a few weeks. It does not follow, however, that a Tuscan cannot be made that is rich in color and **WILL NOT FADE.**

We don't have to make an affidavit. We mean just what we say and the trade who are acquainted with us know that we only say what we mean.

Our unfading Tuscan Red is all that you could desire. A Red that does not fade and is just as permanent as Indian Red, Venetian Red, Ochre or any of the earth paints. Order, say $10 or $20 worth as a starter. We will make the assortment for you. If you don't sell any, we will take the goods back.

We will send with your first order, free, enough one-pound samples to distribute to your painters.

Don't neglect this. It is money to you and you take no chances. Order now.

P.S.—If you don't carry Hollywood Ochre you are losing trade you might just as well have. We will furnish you free samples of either the Tuscan or the Ochre.

GAS ENGINE MANUFACTURE.

H. H. Campbell, Steelton, Pa., after a study of European and American industrial methods, makes the following reference to gas engines in the two continents in Iron Age:

"In the matter of gas engines driven by blast furnace gas the continent has completely distanced us. Engines have been operating successfully in France and Germany for four years, while long before this Riley, at Glasgow, in Scotland, put in operation an engine built by Thwaite, which has been running since 1895. Immense machine shops all over the Continent are busy turning out engines whose aggregate horse-power runs into many thousands, whereas in America nothing of any consequence has been done in this direction. Much of this forwardness in so using blast furnace gas arose from the fact that gas engines driven by illuminating and producer gas have been used much more extensively abroad. The visitor to any English city is struck with the puffing of these engines in the lumber yards and the cellars of numberless workshops, while in America this economical motor is little known."

AN ADVERTISING MORAL.

Once upon a time a donkey fell into a deep hole, and, after nearly starving, caught sight of a passing fox, and implored the stranger to help him out.

"I am too small to aid you," said the fox, "but I will give you some advice. Only a few rods away is a big, strong elephant. Call to him and he will get you out in a jiffy."

After the fox had gone the donkey thus reasoned: "I am very weak from want of nourishment. Every move I make is just so much additional loss of strength. If I raise my voice to call the elephant I shall be weaker yet. No, I will not waste my substance that way. It is the duty of the elephant to come without calling."

So the donkey settled himself back and eventually starved to death.

Long afterward the fox, on passing the hole, saw within a whitened skeleton, and remarked:

"If it be that the souls of animals are transmitted into men, that donkey will become one of those who can never afford to advertise."

D. N. McDonald, general merchant, of Ripley, Ont., has assigned to Allen Maclean, and a meeting of his creditors will be held on March 26.

WINDSOR RETAIL ASSOCIATION.

THE regular monthly meeting of the Windsor, Ont., branch of the Retail Merchants' Association of Canada, was held in their rooms, 16 Opera House block, on Tuesday, February 10.

Although the night was very wet, there was a quorum present and a large amount of business was transacted.

The secretary reported that, according to instructions, he had circulated a petition among the merchants for presentation to the city council asking them to fix by resolution the date of the civic holiday for Monday, August 3. The petition had been duly presented and the prayer thereof granted.

A striking committee to draft the various committees was appointed by the president, which at once got to work, and everything bids fair for the success of the Association's first annual outing, which will take place on May 3, on the magnificent steamer Tashmoo, to Tashmoo Park, St. Clair Flats.

The secretary having been instructed to draft resolutions of condolence upon the death of the late Archibald Napier, submitted the following, which, upon motion, was adopted:

Whereas, it has p'eased Almighty God, in the dispensation of his divine providence, to remove from our midst by death, Archibald Napier, a member of this Association, who for a period of over 40 years, has conducted a retail business in this city; and, whereas, it was God's will that he should live to a ripe old age, and during his long life he was a bright and shining example of the principles sought to be taught and practiced by this Association, namely, that of being in peace, goodwill and harmony with all engaged in the same business as himself; and, whereas, of him it it could be briefly said he was one of nature's noblemen, rugged, sterling honesty, fair dealing and sobriety in everything being the leading characteristics of his almost blameless life; those of us who knew him longest respected him most.

Therefore, be it resolved, that this Association tender to the surviving members of his family their heartfelt sympathy and condolence in this their hour of sorrow and bereavement, and, be it further resolved, that these resolutions be spread upon the journal of this Association, and that a copy thereof be forwarded to his surviving son and successor in business, Alexander Napier, our fellow-member.

Signed on behalf of the Windsor Branch of the Retail Merchants' Association of Canada,

A. E. EDGAR, President,
B. G. DAVIS, Secretary.

TRADE CHAT.

John Carnwith, lately engaged in Smith's Falls, has started a tinshop at Easton's Corners, Ont.

John Isbister, formerly of Milita, Man., left last week for Saskatoon, where he will engage in the hardware business.

Smith & Pethick, hardware dealers, Wingham, Ont., have sold out to W. T. Fishleigh, recently of Hagersville, Ont.

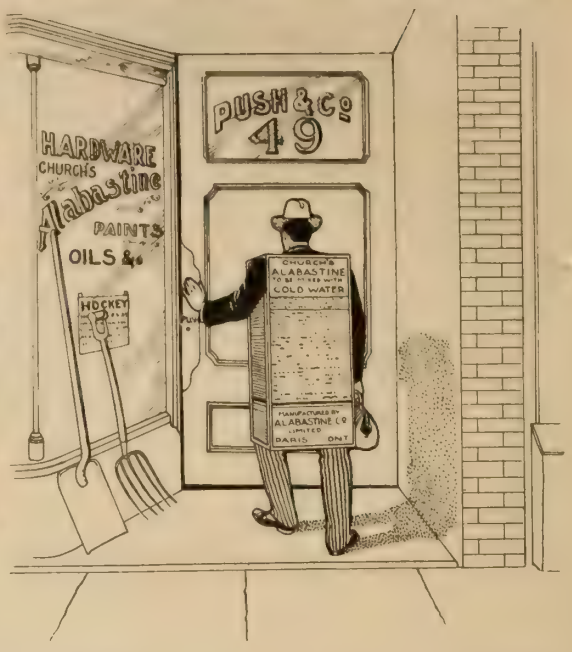
George Nunn has opened up in Hamilton, Ont., an attractive store for the sale of Standard and Domestic sewing machines, the sale of which he controls throughout most of the Dominion.

THE REASONS WHY

Messrs. Push & Co. and all dealers buy and sell **Church's Cold Water**

ALABASTINE

are, because it is **time tried** and **time tested**, and they can speak with confidence when recommending it to their customers. "What's the use" they say, "of trying to sell something else, when it has to be recommended 'the same thing' or 'just as good as **Alabastine?**"



"The Alabastine Company are the pioneers in the manufacture of wall coatings: the experimental stage is past with them. What they have forgotten, the manufacturers of kalsomines and the like are just beginning to experience."

Good goods, well advertised, fair margins, satisfied customers! These are a few of the reasons for handling **Alabastine.**

Alabastine is ready for use by adding **cold water.** This and other features are protected by Canadian Letters Patent.

Alabastine is made in Canada, and is for sale by Wholesale Hardware and Paint Dealers. Also by

HEATING AND PLUMBING

JOINTING GREENHOUSE PIPES.

THE question is sometimes asked in trade journals how to joint greenhouse hot water pipes with Portland cement. The reply invariably is a recommendation not to use Portland cement at all. There is no flexibility whatever in a joint made with this material, which is not strong enough to withstand the strains of expansion and contraction, says Ironmonger. It may serve well for a pipe that never gets hot; as, for instance, a drain-pipe, but for a pipe conveying water having temperatures ranging over 100 deg. the joint must either be flexible, or, if rigid, it must be very strong. There can be no doubt that the joints of these pipes are made watertight and sound by the yarn which is first caulked in, but this requires to be backed up with something to keep it sound. In one instance, in a large grower's establishment, Portland cement was used, but every third joint was a rubber ring which accommodated the strains referred to. There were, therefore, two cement-joints, then one rubber-joint, in all the runs of pipe, and, it may be remarked, there were also plenty of men about who could re-make a joint if one leaked here and there. For what may be termed temporary work, or piping which may have to be altered in some way, as occurs in growers' establishments, the rubber-ring serves well. It is a ring of round rubber, which is stretched on to the spigot end of a length of pipe, and this is then forced into the socket end of another length. This makes the joint, and nothing could be more simple, but it does not do for permanent work. The rubber-ring may, however, be introduced in the latter, as an expansion joint here and there, if the other joints are of a rigid kind. The commonest rigid joint, as being reliable and costing little, is made with iron borings. These are procurable from firms who supply the pipes, and the method of making the joint is as follows:—The proportions of ingredients are, by weight, 100 parts of borings, which must be pounded if very coarse, two parts powdered sulphur, and one part powdered sal-ammoniac. These are thoroughly mixed, and then moistened with water, this being done about one to two hours before use, according to the dryness of the weather. Only as much should be made as can be used the same day. In making the joint the socket is caulked either two-thirds or three-fourths full of yarn, and the remaining space with the borings mixture. The latter rusts into a solid, extremely hard mass, and as it swells slightly in setting it requires skill and practice to save getting cracked sockets. We by no means condemn the various patented expansion joints now on the market. Wherever the cost will admit one or the other of these might well be used, and their extra cost after all is not so great as is often assumed, as the saving in time (labor) is great, and the appearance is good.

TORONTO PLUMBERS' BANQUET.

Great interest is being manifested in Toronto plumbing circles in the banquet to be held at McConkey's on Friday evening. In addition to a large number of members, it is expected that the supply houses and architectural firms of the city will be well represented. A report of the speeches will be given in our next issue.

A PLUMBER APPOINTED.

A practical plumber has been engaged by Montreal to form a part of board of examiners, whose duty it is to grant licenses to all plumbers in the city. The local union was communicated with and they recommended Ed. Cavanagh, and the Board of Health accepted the nomination. The master plumbers are already represented.

LEAD PIPE AND SHOT ADVANCED.

Owing to the steady rise in raw lead Canadian manufacturers of lead pipe and shot have advanced their prices, or rather reduced the discounts. The discount on lead pipe, which was 37½ per cent., is now 30 per cent., while that on shot has been reduced from 22½ per cent. to 15 per cent.

TORONTO MAY BUY GAS PLANT.

Mayor Urquhart, of Toronto, has recommended the purchase of the Consumers' Gas Co., of that city. He says that gas, which is now sold at 80c. per 1,000 ft., could be sold, after paying all debt, charges and other expenses, at 60c., and leave a handsome net revenue. There is no doubt that at 60c. per 1,000 ft. the sale of gas, for both light and fuel, would be greatly increased, even though the proposed movement to establish a municipal electric power plant at Niagara Falls were carried through. Public opinion throughout Toronto supports the proposal to purchase the works.

VACUUM SYSTEMS OF STEAM-HEATING.

AFTER some experience with the single pipe vacuum steam heating principle, I am disposed to think it will ultimately be a thoroughly practical success, both as to installation and economy of fuel, besides furnishing a more agreeable heat than the ordinary system, writes "Manitoban" to The Metal Worker. For a large building, with a number of separate tenants, trouble arises in practice from the fact that one or more of the tenants will "monkey" with the air valves, even going so far as to take them out altogether at times; and this, of course, breaks the vacuum. The air valves are also taken out and replaced several times by irresponsible parties, leaving the valves so that they are not tight and the air leaks into the system. This is my experience with a large block having some 90 separate tenants supplied from 250 radiators.

If a single pipe vacuum system could be made to work without air valves on the radiators at all, the problem would be comparatively easy, and to get the vacuum system to work right is worth a considerable outlay for a single pipe system. The condensed water and the air have to flow out of the coil into the lower part of the heating apparatus; the water to be returned to the boiler, and the air to take its exit by way of the automatic air valves fixed where the tenants cannot get at them. The base of the radiator should slope downward and be connected to the steam riser, so that the steam will be passed into the radiator at the top. By putting the steam in at the top the air in the radiator will not get so hot; it will be heavier and will have greater motive force to get away. The steam supply pipe would thus be connected with the radiator at two points, the top connection supplying the steam, and the lower and smaller one for the return of the water, and to be connected at right angles to the riser. I understand that in an ordinary steam riser, placed perpendicularly, with a right angle connection, with supply of steam to radiators at one side, the steam by preference takes the straight upward course. It, therefore, appears to me that the return water and air, with the arrangement I suggest, would thus have a greater pressure behind for hurrying them to their return than they would have from the incoming steam against their exit from the radiator.

BUILDING NOTES.

The Smith's Falls Canoe Club will erect an attractive club-house, 40 x 50 ft., this spring. W. E. Mills is secretary-treasurer of the club.

Contractor Thos. Allen, Hamilton, is preparing plans for a row of brick houses on the corner of Cannon and Macnab streets.

The Berlin Rubber Co. are erecting a factory at Berlin, Ont. It will be 100 x 50 ft., four stories high, and will be built of cement.

Vancouver builders may go on strike. They are asking for an eight hour day at 50 per hour, and the builders may not grant the request.

Tenders are being called for April 1 for the erection of an annex to Charlottetown, P.E.I., Hospital. Bishop McDonald has the plans.

Campbell Bros. & Wilson have started the erection of a warehouse on Princess street, Winnipeg. G. F. Stephens & Co. are preparing material for a $20,000 building.

Architect Aylesworth, Toronto, is preparing plans for a town hall in Fort William, Ont., to cost about $40,000. A telephone exchange will be put up in a separate building.

The Cleveland-Sarnia Saw Mills Co. will erect handsome new offices this summer in Sarnia, Ont. The new building will be one storey in height, 24 x 40 ft., and fitted with every convenience.

Sydney, N.S., contractors predict another boom in building operations at that city this year. Among those who will erect buildings are Angus McLeod, Isaac Greenwell, Prowse Bros. & Cromwell, and the Canadian Bank of Commerce.

The C.P.R. have announced that they will spend over $200,000 in extending their yards and buildings at Brandon, Man. A round house, an electric light plant, a steel overhead bridge and a passenger station are included in the estimates.

Gault Bros. will erect a 4-storey building on Arthur street, Winnipeg, at once.

A Winnipeg despatch of Tuesday says that the negotiations between Winnipeg and the C.P.R., whereby the latter were to erect a station, an hotel, and make other important extensions there, has been declared off.

HAD LITTLE MORE TO LEARN.

Aberdeen, Scotland, possesses a plumber who seems to be a sort of "Jack of all trades," and a man of substance into the bargain, says Ironmonger. Speaking at a social gathering of the local Operative Plumbers' Association recently, Mr. William Pyper, the gentleman in question, said that some of those present might wonder why he was in the chair, and therefore he would explain how he had reached that proud position: "He had been a grocer, a brewer, a distiller, a flour-miller, a papermaker, a combmaker, and the proprietor of a cemetery. He was still a baker, a horse-hirer, a funeral undertaker, a pawnbroker, an insurance broker, a shipowner, a trawl-owner, and, lastly, a plumber. His connection with the last-named branch of business extended over 16 years, and, although he had had a partner for most of the time, never a wrong word had passed between them." It must be painful to him, in his capacity as an undertaker, to assist at the last earthly journey of those who have formerly been his customers for other human needs.

QUEBEC ORGANIZED.

Wm. M. Merrick, general president of the Amalgamated Association of Plumbers and Steamfitters, has organized an international local union in the city of Quebec.

BUILDING PERMITS ISSUED.

MONTREAL.

Alf. Foisy, Huntley street, 2-storey dwelling, $1,000.

Tilly & Cameron, Colborne street, 2 storey stable, $5,000.

Napoleon Landry, Beaudry street, 3-storey dwelling, $2,525.

A. S. Tavelle, Sherbrooke street, 3-storey dwelling, $4,200.

UNION VS. UNION.

Toronto Master Plumbers have suffered a great deal at the hands of the unions during the past year. Unexpected advances in wages have been forced; agreements have been ruthlessly broken by the men. Now, one of the leading firms, The Bennett & Wright Co., Limited, are delayed in their work because of disagreement between two unions. The electrical workers employed by the firm at the King Edward Hotel have struck because the Steamfitters' Union has infringed on a branch of the electrical trade. The steamfitters claimed that they had a right to put in the conduits for the electric wires, a work the electrical workers say they alone should do. The steam fitters recently applied to their international union for permission to do this work, but the latter body would not sanction their request, and the matter was then brought before the Executive of the American Federation. President Gompers notified the plumbers and steamfitters that they would have to cease putting in conduit pipes on March 16. The steamfitters were busy as usual at the forbidden work yesterday, and consequently the electrical workers, who are employed by the same firm, were called out.

PLUMBING AND HEATING NOTES.

Weber, Sehl & Wolfard have bought out Philip Gies, dealer in hardware, plumbers' supplies, etc., Berlin, Ont.

Lyons & Marks, dealers in plumbers' supplies and lamp goods trimmings, have removed from 52 Adelaide street west to 124 Bay street, Toronto.

W. J. Barrie has decided to erect a 20 x 60 ft. building in Sarnia, Ont. In these premises he will conduct his plumbing and galvanized iron business.

Dame Apolline Audet, wife separated as to property from Louis Harry Gaudry, intends doing business in Quebec as commission merchant, importer and jobber for the sale of heating, plumbing and electric apparatus, under the name of L. H. Gaudry & Cie.

A despatch from Saskatchewan, Man., says that an electric light and power company have been negotiating to instal works here at an early date. There is as yet no corporate body to take up such matters, so that private enterprise alone must be depended upon, and no doubt a charter will be applied for at the coming session of the Assembly.

GURNEY'S BRITISH COLUMBIA AGENCY.

The E. & C. Gurney Co., Limited, of Toronto, which has had an agency in Vancouver under the charge of Charles L. Lightfoot for several years, is registering in British Columbia as an extra Provincial company. Mr. Lightfoot will remain agent and the head office in British Columbia will be at the present premises on Hastings street. The Gurney Co. will continue, as heretofore, and will not build founderies or manufacture stoves out of raw British-Columbian iron, as The Ledger had it this morning.—Vancouver Province, March 12.

AN ENORMOUS GAS-PIPE LINE.

The greatest gas-pipe line in the world is to be built into Pittsburg by The Manufacturers' Light and Heat Co., says The Metal Worker, from the West Virginia natural gas fields, at an expenditure of about $2,000,000. The main line will be of 20-in pipe and 60 miles long, with two branches 20 miles in length, and of the same diameter as the feeders of the West Virginia end of the line. It is understood that the line is to be built and ready for operation by next fall, which will make available for the Pittsburg district an additional natural gas supply of about 60,000,000 cubic ft. per day. This enterprise will bring The Manufacturers' Light and Heat Co. into sharp rivalry with The Philadelphia Co. and The People's Natural Gas Co., who now share the domestic natural gas trade of Pittsburg.

INTERIOR AND EXTERIOR DISPLAYS.

CONSTRUCTING A SHOW WINDOW.

THE construction of the window upon which you depend to a great extent for the success of your business should be carefully considered, as a badly built window spoils or lessens the attractiveness of any display.

THE HEIGHT OF THE STORE.

Perhaps a word is first necessary on the construction of the store, because the window has to be built to correspond with the store, and if the latter is not properly placed the window will be affected.

The store should never be built high up from the street, as a flight of steps, even of only three or four, takes away the business look that should always be so prominent.

Then, again, running up and down stairs is inconvenient, and will often prevent a woman from entering.

Modern stores are always built very slightly raised above the sidewalk—from 4 to 8 in. This makes only one step, and it occurs immediately at the edge of the sidewalk. This step or ledge runs in most cases along the entire front of the store to give a symetrical appearance, as the line of the top of the doorway also continues along the entire front.

THE HEIGHT OF THE WINDOW.

The window should then be only about 20 to 24 in. from the ground.

A higher window affords practically only a front-view treatment, whereas the best view of a window is very often one from above. At any rate, a combination of a view from above with a straight front view is best in all displays, as the effect of size and distance is very much assisted.

THE BASEMENT LIGHTING.

The intervening space between the bottom of the window and the ledge which shows the height of the floor of the store is taken up with windows supplying light into the basement, unless, as in the larger stores, the basement is used for a saleroom. In that case, prism glass is usually embedded in the pavement.

This is really the only satisfactory method of lighting a basement, as the light can be thrown in any direction, affording almost as good light at the back as in the front.

If the basement is thus lighted, fill in the space between the bottom of the window and the ledge with oak panelling.

The ornamental work at the bottom of the window and above the ledge will fill up about 6 in. of the space, leaving only about 8 to 12 inches as the height of the panelling.

THE GLASS.

The glass should, of course, be heavy plate and, if possible, of one sheet, as a break makes the window appear smaller and interrupts the display.

If a break must occur, make the necessary woodwork as small as possible.

The small brass divisions between sheets of glass are the best, and should be used also at the corners where the entrance turns in.

Where the break occurs it is well to have a removable partition run back through the window, affording space for two exhibits, and giving the effect of two large windows.

This partition should be about 5 ft. high, or above the eyes of a spectator, so that both exhibits cannot be seen at once.

THE FLOOR.

The floor of the window should be of the best hardwood and oiled, as many striking displays can be made on a good floor without any covering.

It should be on a level exactly with the lower edge of the glass, and should come close to the glass, so that no dust or dirt can get between them.

The floor should be built in a horizontal position rather than at a slant.

It is true that for the display of small articles a slightly inclined floor is the better, but this is required more in a high window than in one of the height I have advised.

The idea of the slant is so that small articles can be looked down on, as that is the only position in which they can be seen.

If this slant is required or desired a temporary platform can be built to place on the floor, in order to give the required incline.

This temporary structure should be constructed in two or three sections to facilitate removal.

On an inclined floor some displays look decidedly awkward, while on a horizontal floor any display (provided the window is not too high) is not out of place.

THE BACKGROUND.

Any window can be spoiled by its background. Too little attention is paid to this important part of the show window. Tastes differ here too, as many merchants favor an open back. But it is safe to say that in the majority of cases they speak in favor of the closed back. This style is better, in my opinion, in every way. The store is then distinct from the windows, as it should be; people looking in the window are not distracted by who may be, or what is going on, in the store. The windows can be kept clear of frost in winter time.

The making of special backgrounds for certain displays is much more easily accomplished. The best back to a show window is made up of sliding doors to the height of about 5 ft., or high enough to prevent anyone on the sidewalk seeing into the store. These doors can be made of neat framework filled with some opaque glass which will let in light without permitting one to see through it. If the light is not necessary solid doors are better. Above these clear glass is used to the top of the window.

To have the entire back removable is often necessary for the introduction of large articles into the window.

DEPTH OF THE WINDOW.

The best depth is a matter that is hard to set arbitrarily. It depends upon the size of the store and the width of the window more than on the goods to be displayed.

The best windows are not quite so deep now as they have been during the past few years. About 5 ft. is now generally considered the best depth for a window not too small.

USE OF MIRRORS.

Stationary mirrors at the sides (where possible) and sometimes a mirror to cover the back are now used in all the best windows. The primary expense is, perhaps, a consideration, but the improvement they make in any window more than pays for them.

They increase the apparent size of the window and quantity of articles displayed, and make a clean edge and better light.

When used, they should be about 5 ft. high, or the same height as the solid portion of the background, and should fit closely at the front and back of the window.

No lettering of any kind should break the clean face of the glass. All the lettering that is needed to denote name and business should be only in its proper place—the signboard.

Davidson's Standard

Pleated Stove Pipe Elbow.

THIS IS IT.

SEE how the pleats go around the back as well as throat. All the good points of the old-style Elbows combined, without any of their disadvantages. No place left for dust and soot to lodge, nothing to impede the draft

Suitable for burning either hard or soft coal or wood.

The Thos. Davidson Mfg. Co., Limited, Montreal.

INDUSTRIAL GOSSIP

THE directors of The Brompton, Que., coal that they intend to erect a Pulp and Paper Co. have announ paper mill at Brompton.

Alterations will be made in the Hamil ton Hospital. The changes will increase the wards.

Higgins Bros'. sawmill at Metcalf, Ont., was destroyed by fire on Monday morning. Loss, $3,000.

A Rochester, N.Y., shoe firm may locate in Kingston. The industry would employ 50 hands at the outset.

The Hardware Manufacturing Co., of Parry Sound, Ont., have been organized. Sheriff Armstrong is largely interested in the concern.

Laborers employed in building the new dry dock for The Collingwood Shipbuilding Co., have struck for an increase of 50c. per day.

John Dittrick, foundryman, Perth, Ont., is interested in a company which proposes to manufacture bolts, nuts and and drop forgings in Perth, Ont.

Preston, Ont., has voted $20,000 as a loan, to be paid back in 20 years, to The Canadian Office and School Furniture Co., who will erect a new factory at once.

John Patterson, of Hamilton, Ont., says that a proposal is being considered there for the starting of a steel mill and furnaces that would give employment to 25,000 hands.

The Owen Sound Iron Works Company, Limited, who were recently authorized to increase their capital from $20,000 to $100,000, expect to start foundries at Owen Sound, Ont., in April.

The Chatham, N.B., Board of Trade is negotiating with a company which asks a loan of $25,000, repayable in yearly installments of $1,000, and agrees to employ 150 hands. The Board of Trade at a recent meeting approved of a loan, but asks for further details.

A new coal field has been discovered in British Columbia. Last week, 220 coal prospectors' licenses, costing $11,000, were issued by the British Columbia Government. The claims are staked about 16 miles from the Crow's Nest Pass Railway, and 30 miles from Morrissey, B.C.

Business men or Orillia, Ont., are considering a proposal from Mr. Fader, of Toronto, to form a company to manufacture a patent doorlock. He wants to start with about $10,000 capital, of which he would invest $1,000, and would take further stock in payment for use of his patent rights.

Two moulders, recently employed in Delehay's foundry, Pembroke, Ont., were discharged. Several of their fellowworkmen thereupon struck, but one of them, an apprentice, soon returned to work. The discharged moulders then visited him, using intimidating language toward him. They were subsequently arrested and fined, one of them $10 and costs and the other, $5 and costs.

APPLICATIONS TO PARLIAMENT.

The Grand Trunk Pacific Railway, for power to construct and operate a road from Gravenhurst, Ont., to North Bay.

The Canadian Northern Railway, for power to amalgamate with The Western Extension Railroad Co., or to purchase its undertakings, lines, etc.

The Quebec Bridge Co., for authority to build lines of railway to connect with the Grand Trunk Railway and the Intercolonial Railway, and to make such use of their property as is advantageous.

NEW COMPANIES INCORPORATED.

Canadian Factories, Limited, Toronto; capital, $50,000

The Meaford Canning Co., Limited, of Meaford, Ont.; capital, $50,000.

The Automatic Short Gear Co., Limited, Toronto; capital, $50,000.

The Coronation Gold Mining Co., Limited, Ottawa; capital, $1,000,000.

The Dominion Chair and Cabinet Co., Limited, Toronto; capital, $100,000.

The Robert Bell Engine and Thresher Co., Limited, Seaforth, Ont.; capital, $200,000.

The Montreal and Western Oil Company; capital, $20,000; headquarters at Petrolea, Ont.; A. T. Gurd, Petrolea.

Mansions, Limited; to erect buildings, contract for steam-heating, etc.; capital, $200,000; directors, James Hawes, F. W. Maclean and Henry Maclean, Toronto.

Canadian Securities, Limited; capital, $500,000; directors, Lloyd Harris, Brantford; H. M. Pellatt, James Mason, S. G. Beatty and R. J. McLaughlin, Toronto.

The Copeland Chatterson Co., Limited, Toronto; capital, $500,000; directors, R. J. Copeland, A. E. Chatterson, R. M. Copeland, W. J. Wharin and Alexander Mills.

The Montteal Steel Works, incorporated with the right to acquire assets and the goodwill of any business of a like nature, and may acquire shares of any company doing a similar business, and may pay for the same in whole or part in cash or in paid-up stock of the company, as the directors may deem advisable. The capital of the company is placed at $1,500,000.

COMMERCIAL LOYALTY OF CANADA

Under date of February 2, Franklin D. Hale, United States Consul at Coaticook, Que., reports as follows to his Government at Washington:

Coaticook, Que., being situated in the midst of an agriculturally rich section of country, possessed by a sturdy and thriving population, naturally attracts a large retail trade. Most of the goods found on the shelves are of Canadian production and manufacture, or imported from other countries than the United States. Comparatively few of our goods are offered for sale. No commercial travellers carrying American articles come here, although they are free to drum trade, and there is no duty on their samples. As far as possible, merchants are loyal to the Canadian producer. Home production is daily meeting the demand. In some lines, in which there is competition between the American and the Canadian or English articles, we are holding our own and more, but it is because of the unquestioned superiority in style, quality, workmanship or durability. The actual consumer is probably quite largely influenced by the price, which is affected by the duty paid; yet, with both consumer and middleman, there is a strong element of what I have called commercial loyalty to the home, or the Mother, Country. The expansion of industries in Canada is very great, and United States capital is establishing factories in all parts of the Dominion for almost all lines of work. When the time comes that Canada can supply her own demands, she will surely buy less of us, and if she should find herself burdened with a surplus we may meet her competition elsewhere.

WHO WILL IMPORT IT?

The Department of Trade and Commerce at Ottawa is in receipt of a letter written to W. L. Griffith, formerly Canadian agent in Cardiff, Wales, by Wm. Turner, agent for Fred. Dinghorn & Co., of Cardiff. The writer desired to be put in communication with any Canadian importers of Swansea anthracite, or Welsh coal. Mr. Turner anticipated opening up a trade that might grow to large proportions. The resolutions regarding the importation of Welsh coal in preference to the American article, which were made by the Montreal branch of the Manufacturers' Association a few weeks ago, will likely be well received by exporters in the Old Country.

75 YEARS ESTABLISHED 1825. 75 YEARS

ANALYSIS OF THE STORE-ADVERTISING SCHEME

By a Commodity Producer.

EVERY manufacturer and producer of advertised articles should very carefully consider the attempt of an organization to form a monopoly of space in retail stores. In an interview with a representative of this concern, the writer inquired if we did not subscribe if we would be permitted to put up a box package of our goods with a lid on, with a sign to show when opened, to which he replied that they would certainly interfere with any attempt on the part of the merchant to display our goods in the original case. Such an arrangement is nothing more than a trust, and every manufacturer and producer that contributes to it is destroying his opportunities to get the same effects of advertising that he has heretofore secured free. By a concentration of efforts of Canadian manufacturers this monopoly can be discouraged. Their scale of prices is as follows:

Signs in	5,000	stores, size	22 x 16,	$1.80	per sign	....	$9,000 per annum.
"	4,000	"	"	1.90	"	.....	7,600 "
"	3,000	"	"	2.00	"	.....	6,000 "
"	2,000	"	"	2.15	"	.....	4,300 "
"	1,000	"	"	2.25	"	.....	2,250 "
"	500	"	"	2.50	"	.....	1,250 "

This compared with street car and other methods of advertising will not stand a close analysis for value received.

In the better class of stores the heads of the house do not do the trading. Their servants are generally sent, or the orders are delivered over the telephone. With the other class of trade, the children usually go to the grocery store for the requirements of the family. Any retail grocer will tell you that of his sales 50 per cent. is made to the servants, to the children, or over the telephone. Therefore, the average retail grocer probably does not have 20 customers daily that would read a sign placed in his store, especially if it was mingled with a large number of other signs. Of this number, there is probably not one in the 20, that 30 minutes after leaving the store, could name two of the signs and state what they advertised. The same signs would always reach the same people, limiting the effect. Furthermore, if anyone about to contract for this class of advertising, will visit a grocery store and lean against the counter, he will observe that the angle at which the signs will be placed makes it almost impossible to see them, unless a row of bells was placed at the top of the ceiling to make the customers look up. Probably not one customer in five would know that the signs were there. It will be impossible to place them lower so that they could be more prominent without interfering with the shelving of the merchant, which, of course, he is not going to permit. The regular method of chandelier hangers and signs a little more indiscriminately placed, with an attractive exhibit of the goods, are much more effectual, and all manufacturers should do what they can to suppress this attempt to draw a royalty from the producer.

As against the very few people who would see these signs in a grocery store, street car, newspaper and outdoor advertising would afford probably one hundred times the advertising power. People who are riding in street cars have leisure to read every sign before them. The location of the signs is at a convenient angle for the eye. They usually remain in the car from 10 to 15 minutes, and during that period can read all of the literature. The average street car probably carries in a day twenty-five times more people of the consuming class that the manufacturer wants to reach as visit a grocery store.

The patrons of a grocery store, even if the majority of them were heads of homes, would not be influenced to make purchases by the store-sign process; they are usually busy with the clerks or the proprietor, and their attention is detracted from any advertising that might appear. Besides the best advertising in a grocery store is a display of the goods, and manufacturers could better afford to pay the same sum to the grocer to make a good counter and window exhibit of their products, than to put up a sign that is charged for at an exorbitant figure.

A sign well placed on the outside of the retail grocery store, where people going into the store can see it, as well as those that pass along the sidewalk and from the street cars would be of much more value. This is demonstrated by the success of the window displays and other sign matter that always attract our attention on the street. Probably five hundred more people would see an attractive sign on the outside of a building where one party of the class who would be influenced to make purchases would see it in the retail grocer's store.

There is probably no manufacturer of a commodity that will claim that he built his business by hanging up signs with the retailer—it is the magazine, the outdoor sign, street cars and the newspapers and counter matter that have recommended advertising.

It is the retail grocer who has made such terrible howls about departmental and cut-rate stores monopolozing the business, and yet some of them are becoming a party to even a stronger pool, because it is intended not to leave any space whatever that is not contracted to the organization that is attempting to dispose of it at a figure that is an artificial value, and at the same time dictate to every producer whether he snall be entitled to a display of his products in the store or not.

This is a matter that the Canadian Manufacturers' Association might interest themselves in and probably prevent producers the unnecessary expenditure of thousands of dollars, not because they could get their money's worth, because it would be necessary to do so, so that the retail grocer could get 50 per cent. of his space, which the organizations pay him. They claim they will control every grocery store in Canada in time.

H. Boker & Co.'s Scissors and Shears

Well known for their reliable quality.
The most satisfactory line for retailers, to sell at a good profit.

ALSO

H. BOKER & CO.'S "Tree" Brand Razors and Pocket Cutlery.

For sale by all leading Wholesale Hardware Houses.

CURRENT MARKET QUOTATIONS.

March 20, 1903.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

MIXED PAINTS

Every dealer knows the advantages of selling goods that have distinctive points of excellence and superiorities of their own.

"Jewel" Brand Paint

Made by WADSWORTH, HOWLAND & CO., CHICAGO,

is The Best on Earth.

A single trial will convince you that this paint is all we claim being far superior in body, more lasting, will retain its color and lustre longer than strictly pure lead and oil mixed by hand. It is a desirable paint to use on account of its spreading and covering properties and its great durability.

VOL. XV. MONTREAL AND TORONTO, MAROH 28, 1903 NO. 13

COMMENT ON CURRENT TOPICS.

WHETHER Hon. Israel Tarte was economically right or wrong in the doctrines he held regarding the tariff, he was wrong in giving expression to them while holding a portfolio in a Government at least professedly adhering to doctrines of a contrary character. His duty was first to have resigned. Then he would have been free to say and do as he pleased. Had he done this, the number of his admirers would have been undiminished, and his opponents would have had less reason to suspect him of dramatic effect at the expense of breaking with Cabinet custom.

* * *

We are again told that King Edward wears a tired and worn look. But is it not a dictum that "Uneasy lies the head that wears a crown?"

* * *

The Morning Post of London, England, says that political morality is almost non-existent in Canada. What has for some time been gradually dawning on many right-thinking men in this country, is evidently beginning to attract the attention of newspapers in Great Britain. It may, perhaps, touch our pride to have these unpleasant things proclaimed by the British press, but it is better to confess that we are far from being what we ought to be politically, than to shelter ourselves behind the Pharisaical plea that we are not as bad in this respect as other men—and especially as those American politicians, at whom we sometimes look askance. But public opinion is waking up. When it is wide awake we may expect the day of reckoning to be near at hand.

* * *

At a meeting of the British Women's Emigration Association in London the other day Lady Frances Balfour declared that the aim in sending women to Canada was to get them husbands. As four will not divide 1903, this cannot be leap year. But it is to be hoped, however, the young men in the wild and woolly Canadian West will not look upon the proposal as unladylike, but will surrender their heart, and of course, then will.

* * *

If American people and American capital keep flocking into Canada in the years to come at the same rate as at present, how long will it be before the northern, and not the southern, half of the continent is the predominating power?

* * *

There are people in this country as well as in Great Britain who have not approved of all that the Right Honorable Joseph Chamberlain has done during the last three years in regard to South Africa. But even his strongest opponents can scarcely fail to approve of his decision to visit that part of the British domain and investigate for himself the condition of affairs as they are to-day. The "wounds of the war" are deep, and are still a long way from being healed, and the Colonial Office will be in a better position to intellectually prescribe for the patient, now that its head has personally diagnosed the case. If there is one quality that Mr. Chamberlain possesses in a greater degree than any other it is the quality of business. It was this that led him to South Africa: and it is to be hoped it will not forsake him and his colleagues in the delicate task of reconstruction to which they have with much zeal set themselves.

* * *

Lord Avebury said in London a few days ago that he was proud of the colonies. Canada, as one of the colonies, thanks him, but was he not rather damning with faint praise when in almost the next breath he declared that "at present the colonies are a burden to the Mother land?" Some of the colonies no doubt are, but the charge does not apply to all and certainly not to Canada and Australia, which are the premier "dominions beyond the seas."

* * *

Hon. Geo E. Foster is trying to figure out why he was defeated in the North Ontario election. But, like most defeated candidates, he does not appear to be basing his calculations on true mathematical principles.

* * *

Canada is to-day a part of the British Empire, not because of any great efforts that the British statesmen and British governments in years gone by have put forth either to help her in her adversity or to retain her affections in times of prosperity. When our territory was invaded by armed forces it was the militia that repulsed the invaders. When the boundaries of the country have been in dispute and when treaties have been under consideration the representatives of the British Government have not by any means always been zealous for the interests of Canada. The late Sir John Macdonald has left on record in no ambiguous language his experience with the British Commissioners at Washington. Even such Imperialists as Lord Beaconsfield considered Canada a millstone about the neck of the Empire. And Gladstone, we know, was once prepared to barter Canada away to the United States.

* * *

But "a better day is coming," in fact, its dawn is already here. The coldness and indifference of the past is vanishing. The Mother Country is recognizing that in reducing the tariff on her products, and in sending [illegible] to South Africa, we are [illegible] substantial aid. It is only [illegible] that some of her statesmen charge us with being [illegible]

COST OF DOING BUSINESS

The Views of Some Retailers

THERE is probably no question that interests the retail hardwaremen more than that in regard to the cost of doing business, for it touches upon a vital point; it is the aim of every merchant to keep his cost at as low a point as it is possible, with the efficient carrying on of his business. Below, are the printed opinions of a number of retail hardwaremen throughout the country in regard to the per cent. of cost hardware men allow for doing business. These letters are in reply to a letter sent to them from this office at the request of a retail merchant in an eastern town, of about 2,000 inhabitants, who is desirous of getting an expression of opinion from his fellow business men on this particular point.

The opinions we express should not by any means exhaust the question. It would, therefore, be a good thing if retailers would go a little more fully into the points as to what they consider legitimate items to charge to the cost of doing business. It is to be hoped there will be a ready response upon this point.

Views of an Oshawa Firm.

I would say that it would be a hard matter to decide as to what per cent. would be proper to allow doing a retail business, as to each merchant the cost would be different, as it would certainly have to depend on what amount of business is done and also the expenses in connection therewith.

You say your subscriber allows 7½ per cent., or it costs him that, whereas it costs me 10½ per cent., so you can see there is a difference of 3 per cent., and I cannot see how anyone can place a per centage of costs on any business until he has the business for over one year, so as to get the actual costs or expenses and amount of business done.

Views of a Lindsay Firm.

In our business it costs us 10 per cent. on goods purchased to cover running expenses. Freight is not included as an expense.

Views of Another Lindsay Firm.

We find that for the past two years our expenses averaged 13 per cent. per annum of the total sales. This includes freight, cartage, rents, salaries, and everything constituting expenses. We do not know whether your correspondent includes freight in his estimate of 7½ per cent. or not. We have no convenient way of ascertaining our freight charges alone, as our expense account has this amount entered indiscriminately as paid out, but would suppose they would be about 4 or 5 per cent. of total sales.

Views of a Bowmanville Firm

In regard to the cost of running a retail hardware business, I would say at least 10 per cent. Trusting the above information will be found satisfactory

---

Views of Another Leamington Firm.

Replying to your favor of March 10 re per centage of cost for doing business, we think your correspondent's allowance is rather scant. We consider 10 per cent. close enough.

Views of a Rat Portage Firm

The cost of doing business depends entirely upon the amount of business done in proportion to the necessary expense. Some four years ago, when business was good here, our expense was about 10 per cent., while now that I have a larger store and less business, our expense is about 15 per cent., and in any case I think it is low for this Western country. I find 10 per cent. as low as it can be done out West here.

Views of a Brockville Firm.

In reference to cost of doing retail business would say that it will cost at least 10 per cent. in a town of this size. This is my experience.

Views of an Uxbridge Firm,

We are in a quandary. We would like very much to know how your subscriber manages to run his business on 7½ per cent. We have come to the conclusion that it must either be a very small business, or a very large one. If it is so small that he can do most of the labor himself and no outlay for assistants, he might possibly do it; but take a fairly good business in a town of that size we cannot see how it can be done, unless his turnover is very large. We have figured ours down as fine as possible, as our statement will show. We have allowed $10 per week for the two partners and one clerk, and the other at $5 per week, and have not taken into consideration the interest on the money invested, which should be counted in as running expenses, and we find that we cannot do it less than 15 per cent. We would like very much to see in "Hardware and Metal" the opinions of different ones on this subject. It would be beneficial to all.

Our statement of turnover and expenses:

Rent	$ [illegible]
Taxes	[illegible]
Insurance	[illegible]
Salaries	[illegible]
Heating	7 [illegible]
Telephone	[illegible]
Interest (6%)	[illegible]
Stationery and postage	[illegible]
Advertising	[illegible]
Freight	[illegible]
Total	$ [illegible]

Yearly turnover about $20,000

Views of a Port Arthur Firm.

"Old Up to Date," Port Arthur, referring to "Subscriber's" inquiry as to proper per centage for cost of doing business, and his allowing 7½ per cent., to the writer's mind this is a question in which there is room for a great deal of controversy, which will bring forth very divergent ideas and figures, all of which, notwithstanding the great differences, may be perfectly correct.

The question is one that is entirely governed by the circumstances surrounding and pertaining to each particular case. Presuming, however, that the inquiry is more a desire to draw forth the experiences of different merchants than a controversy, I herewith give you the result of my 17 years' business experience.

Let it first be understood that my expenses have been made up as follows: Interest, salaries including a good one for myself, rent, insurance, taxes, cartage, fuel, light, stationery, postage, and all other sundry expenses incidental to the running of a business. And in this category it may be well to mention that I charge, each year to expenses, an amount equal to 7½ per cent. of all shop fixtures and moveable plant.

In connection with the first-mentioned item, interest. For this I keep a special account, charging thereto interest on capital and all borrowed money, crediting to this same account all cash discounts. If the balance at the end of the year is a debit, it is charged to expense account; if a credit, it is credited.

The percentages given below commence with and include the year 1886, and close with 1902, and are percentages of the sales: 18 per cent., 16½, 17, 17, 18, 16½, 20, 21, 22, 23, 17, 17, 12, 13, 13, 10.

It may be of interest to mention that the two most profitable years were the fifth and sixth, having percentages of 18 and 13 respectively. The smallest year's business was $16,000, and the largest $97,000, the first and last year's respectively.

Mineral Production, Canada and United States

By GEORGE JOHNSON, Dominion Statistician

THE statistics of mineral production in Canada and the United States for 1891 having been published we have the means of comparing the development of the two countries in the production of mineral wealth. Both countries classify their mineral production into metallic, non-metallic and miscellaneous, though the officials of the Geological Surveys in both countries differ in their assignments, according to the proverbial saying about our good friends the doctors of medicine.

Let us rearrange our Canadian list so as to make it correspond with that of the United States Geological Survey, not because the distribution of the Washington savants is any better than the one devised by our own wise men, but simply because there are fewer changes in the selected readjustment than would try our patience if we adopted the alternative.

In the general division of metallic, non-metallic and miscellaneous, the value of each country in 1901 was :

	Metallic.	Non-metallic.	Miscellaneous.	Total.
United States	$524,873,284	$566,351,096	$1,000,000	$1,092,224,388
Canada	42 309,202	24,103,506	300,000	66 712,700

The first fact that presents itself is the comparative smallness of the Canadian output, just about one-sixteenth of that of the United States. Taken on a per capita basis the United States produces $14.12 per head of its population, and we, $12.42, a difference of $1.70 per head. Put in this way the difference does not appear to be so unpleasantly great. Still we do not produce as much per head as our neighbors, although we have as great an area of country and are equally well endowed with mineral wealth. It is some consolation that we are catching up. In 1900 we were short $1.97 per head. This is reduced in 1901 to $1.70. If we made the same relative increase we would produce the same per head value as the United States by 1908. Canada was $6 per head behind in 1891 and only $1.70 behind in 1901. The United States increased its per head output in 1901 as compared with 1891 by $4.20, and Canada its by $8.50.

The first column in the above table shows the value of the metallic production of the two countries. This includes antimony, copper, gold, pig iron, lead, mercury, nickel, platinum, silver and zinc, and the same in the United States, with the addition of quicksilver and aluminum for the latter country.

In the United States this metallic production forms 48.05 per cent. of their whole mineral production, while in the case of Canada, it forms 63.42 per cent.

In every $100 of mineral wealth produced in the United States, $48.05 comes from metallic sources, and $51.95 from non-metallic and miscellaneous.

In Canada, in every $100 produced, $63.42 comes from metallic, and $36.58 from non-metallic and miscellaneous.

This was not always the case in Canada, for, in 1891, Canada's metallic production was only $29 in every $100.

In 1891 the output of Canada had to be multiplied by 55 to bring it up to the output of the United States, but in 1901, 12½ would be the multiplier, and to that extent Canada has decreased the distance between herself and her big neighbor in respect to metal production. Canada was 55 miles in 1891, and in 1901 she was only 12½ miles in the rear, at which rate it will not take her long to catch up and pass.

Notwithstanding the large increase in production in the United States in 1891-1901, over $224,000,000, Canada has gained upon her neighbor to the extent indicated.

The increase has been, therefore, more emphatic in Canada than in the United States, marked as the development has been in the latter country.

In the United States by far the largest part of the increase is due to the enlarged production of pig iron. In 1891 the production was 8,279,870 tons, and in 1901, 15,878,354 tons, an increase taking values of 88 per cent. against a general increase of 64 per cent. in the other articles belonging to the metallic class.

Canada made no such progress in the same period. In 1891 she made $368,901 worth of pig iron, and in 1901 $1,212,113. Relatively this is a greater development than that of the United States, but $46 in every $100 worth of the metal production of the United States was derived from the furnaces which melted the iron ore, while, in Canada, not more than $2.80 was due to production of iron.

The equipment of iron and steel works and the encouragement given by the Government in the shape of bounties has resulted in a great development of the production of iron, but the development does not show in the year under review, which is the latest for which the statistics of the two countries are supplied.

In Canada in 1901 very much the largest part of the increase is due to the greater production of gold. In 1891 the gold produced was valued at $930,614, and in 1901 at $24,128,503. In the case of Canada this was 57 per cent. (in 1901) of the total metallic production. In the United States in the same year the gold produced was about 15 per cent. of the total production of metallic substances.

As already stated the United States returns include most of our articles and in addition quicksilver and aluminum, while we have nickel, which appears in the United States returns in very small quantities, if it has any right there at all ?

Of Aluminum we could produce immense quantities, for we have the material in abundance. Seemingly we do not need it in sufficient quantity to make it worth while to provide ourselves, and we therefore import about $16,000 worth a year. $8,700 of which is in ingots and the remainder in manufactured forms. The world produces about 6,700 short tons of the value of $3,590,000, and of that the United States has a production valued at $1,920,000, or more than one half.

Of quicksilver, the world's production is about 3,470 tons, about 1,000 tons of which come from the United States. Spain and the United States producing about the same quantity. California is the great quicksilver State.

Of tin, neither country produces a pound. Canada may have it, but it has not been found. There is a good deal of it needed for the world's uses, and whoever succeeds in discovering it in Canada may count upon a fortune following the find. In the meantime we import in various forms about $2,500,000 worth of tin annually.

Reference has been made to gold and iron as two of the most important of our metals.

The production of gold has increased every year for a long time, till 1901, when there was a drop in the quantity.

In 1892 the value was $907,600 ; in 1893, $976,600 ; in 1894, $1,128,690 ; in 1895, $2,083,700 ; in 1896, $2,755,000 ; in 1897, $6,027,000 ; in 1898, $13,775,420 ; in 1899, $21,261,584 ; in 1900, $27,908,153, and in 1901, $24,128,503.

The development of the production of gold is, of course, primarily due to the discovery of the metal in the Yukon Territory.

Altogether, from all sources, Canada has added to the world's store of the

yellow metal $101,876,000, of which over $70,000,000, or 813 in every $100, have come from the Yukon Territory, and practically all of it since 1897.

The production of gold has been, however, maintained in other parts of the country. In 1891 the yield of gold in Canada, exclusive of the Yukon, was under $900,000, and in 1901, it was (without the Yukon's contribution) $6,130,000, or a gain of $5,230,000.

In the United States the production of copper stands next in value to pig iron. Its value in 1901 was $6,400,000 more than the value of the gold yield of that year, and amounted to $86,630,000. This was over $11,000,000 less than in 1900. The production of copper in Canada in 1901 was $6,097,000, a gain of over $3,000,000 in 1891, as compared with the previous year, and of $1,947,000, as compared with 1891.

Of course, in the production of nickel, Canada surpasses the United States and all other countries. The chief producers of the world are Canada, Germany, and France, in all in the neighborhood of 87,750,000, of which Canada produces $1,600,000. The nickel produced in the United States was under $4,000 in 1901.

The non-metallic division of both Canada and the United States includes fuels, structural material, abrasive materials, chemical materials, pigments and miscellaneous

Fuels include coal, natural gas and petroleum. Of these, in 1901, the United States produced a value of $442,190,751, an increase of 86.5 per cent. over the production of 1891. In 1901 Canada produced $14,581,540 worth, an increase of 78 per cent. on the value of the production of 1891. The production of the United States in 1891 was 30 times more than that of Canada, and in 1901, it was about the same, Canada holding her own.

In 1868 Great Britain produced 115,500,000 tons of coal and the United States 31,500,000. In 1878 the production was, Great Britain, 148,500,000 tons; United States, 57,800,000 tons; 1888, Great Britain, 190,500,000 tons; United States, 148,500,000; 1898, Great Britain, 226 and one-third million tons; United States, 219 and nine-tenth million tons.

In 1900 the United States for the first time had a greater production; the figures being, Great Britain, 252,000,000 tons: United States, 269 and seven-tenth million tons, still further increased in 1901, when the United States' production reached 293 and one-third million tons, against Great Britain's 245 and one-third million tons.

In 1868 the British Isles' production was 36 times that of the United States; and in 33 years (1898), the United States produced within seven million tons of Great Britain's production.

We have the coal. The demand for it is increasing, and there is no reason why Canada should not be one of the greatest of the world's coal producing countries.

In structural material such as stone, tiles, clay for brick, cement, the United States produced $85,202,715 in 1901, an increase of $15,597,789 over 1900. Canada obtained from her own resources $6,803,756 worth in 1901, as against $6,372,901 worth in 1900. Canada's increase is about seven per cent., the United States' increase is over 22 per cent.

Among these articles is cement of which Canada uses about 700,000 barrels a year. The quantity produced in Canada was

MR. GEORGE JOHNSON, Dominion Statistician.

450,400 barrels, the remainder being imported. There has been great expansion in this industry in Canada, and undoubtedly, in the near future, the demand which is likely to be greatly increased, will be supplied from home resources.

Chemical materials include borax, bromine, fluorspar, gypsum, marls, phosphate rock, pyrites, salt and sulphur, according to the United States list. Of these our Geological Survey takes cognizance for statistical purposes of gypsum, phosphates, pyrites and salt.

The production in Canada of phosphates is very small. From 31,700 tons in 1890 it has gone down to 1,033 tons in 1901.

The production in the United States in 1901 was nearly 1,500,000 tons, which is an increase over 1891 of 895,000 tons, though between those dates the quantity produced was in many years equal to that of last year.

The exports to the United Kingdom by the United States of phosphates to the value of over $500,000 in 1901 shows that there is still a market for American phosphates, but there is none for Canadian phosphates. We have abundance. Why did we not hold what trade we had? The reason must be known. Is there anything to be done that will restore this phosphate industry to its former position or must we resign ourselves to abandonment of the business altogether? Seemingly this point will bear investigation. Possibly the application of electricity in the production of phosphorus would give an impetus to the business.

Of sulphur, we do not appear to produce any quantity. There was a statement that Mr. Clergue intended to make it from the pyrrhotine ore of Sudbury, for use in the manufacture of sulphite pulp for papermaking, but if he has made it, the fact has not made itself known in the statistical returns.

Among miscellaneous material may be mentioned asbestos, of which we produced in 1901, 40,217 tons, valued at $1,259,759. Of this article the United States produced 747 tons, valued at $13,498.

Canada is a maker of arsenic to the value of $41,676, an increase of $18,951 over the previous year. It is produced as a by-product of the gold-milling operations by The Canadian Gold Field's Co.

In a general way, during the five years 1897-1901, we produced $248,160,323 of articles classed under the heading of mineral production, and we exported in the same period $104,078,270, leaving for home use about $144,000,000.

In the five-year period, 1890-1895, we produced $92,334,626 and exported $27,677,270, leaving $64,657,356 for our home use.

This would show an increase of 122 per cent. in our utilization of our mineral production.

Of course, considerable of the increase in production is due to the very great development of our gold production. In 1897-1901 we produced gold valued at $93,100,676, against a production in 1890-1894 of $5,093,282.

It will be instructive to see how we stand if we eliminate the gold from the exports. The exports of 1897-1901 would then be $55,819,815, leaving minerals to the value of $192,340,608 to represent home use. The exports of 1890-1894 would be $25,583,819, leaving $66,780,807 to represent home use. This shows an increase of 188 per cent. in our utilization of our own mineral production and points to a very great development in the home industries which depend upon the mineral output. It also shows that in various forms and ways we utilize more and more the gold supply of the country within the country, instead of exporting it.

Thus, in 1890-1894, we retained $3,000,000 of our gold product and exported $2,093,000, making a total output of $5,093,000.

In 1897-1901 we retained $44,842,221 and exported $48,258,455, making a total output of $93,100,676.

THE FUR TRADE OF THE NORTH

AN INTERESTING SKETCH OF ITS HISTORY AND METHODS.

A VERY halo of romance gathers about the fur trade of the North. Books have been written and songs sung in its honor. Long lives have been spent in it, and, indeed, all the early history of Canada is indissolubly associated with the fur trade. Next to jewels, fine furs stand highest in the list of costly adornments. Great companies have risen to fame and sunk into oblivion in the prosecution of the trade, and princely fortunes have been won and lost.

The Hudson Bay Company, of course, occupy the first place in the fur trade, and Ballantyne and others have immortalized the Hudson Bay voyageurs.

The plan on which the trade is carried on varies very little now from what it did 200 years ago, the changes being only those that advancing civilization have made imperative.

House of the Factor of The Hudson Bay Company at Fort Chipeyan on Peace River, near where it flows into Lake Athabasca. A celebrated fur trading-post.

In the early days this trade was what called the company into existence, and from very small beginnings, the forts, or posts, were pushed from barren Labrador to the Pacific Coast. The officers of the company traded with the Indians for furs. The result of the winter's trapping was brought to the nearest post, examined, counted, paid for in goods. When the trappers were all heard from, the furs were again sorted and packed, according to their value, in bales. This baling of the furs is quite a business in itself. The press is a very simple affair, and its form has never varied. It is a box-like structure between uprights, the leverage being supplied by a long pole caught on a hook at the back of the press and weighted at the other end by three or four husky trappers, or clerks, or peradventure some heavy stones. The furs can in this way be compressed to an astonishing extent. Neatly wrapped in one of the larger and inferior skins or in canvas and well corded, the package is a compact and convenient one for handling.

When all the packages at a post were ready the voyage was begun. In the very start canoes were employed, but very early in the history of the company boats for the purpose were built at York Factory, from which they took their name. Eight men made up the crew of one of these boats, and 80 packages her complement of cargo. Each man was responsible for 10 packages. These he must see loaded at the start, unloaded and carried over portages and loaded again, day after day, until the long journey was ended. In the old days the furs used to be concentrated at Vancouver, York and Moose Factory, and as the boats in twos and threes met on their way to these various forts, they joined company and journeyed together, and this was the real holiday of these men, and no romance that has yet been written fully portrays the charm of these evenings around the camp fires in the wilderness, when the echoes caught up and repeated the gay songs of old France, the stirring Jacobite songs of Bonnie Scotland and the ballads of Old

One of the Hudson Bay [illegible] engaged in the northern fur trade at anchor ab[illegible] Grand Rapids on the Athabasca.

One of the eight-oared boats of The Hudson Bay Company's fur trade.

J. J. Turner & Sons

PETERBOROUGH, ONT., CANADA.

Telephone 180 [illegible] Long Distance [illegible]
Turners' Patent [illegible]

England [illegible] fraught with danger [illegible] many a brave soul went out in the [illegible] of swift rapids. But it was a life that produced a grand type of [illegible] courageous, resourceful.

The changes brought about by the passing years in this mode of transport have not been many. The boats are larger and the number of packages have been increased to about 120, and, though the crews are still limited to eight men, their pay is larger, and the distances made by these boats are not so great, as steamers have been placed on the larger lakes and rivers. The concentration has also been varied, Edmonton, on the Saskatchewan, being now one of the main points and Winnipeg another.

The bulk of the furs received by The Hudson Bay Company is still sent to the great semi-annual sales in London, England, but, with the passing of the years, the great company has ceased to be the sole purchaser of furs from the Indians and trappers generally. Almost every storekeeper in the country secures a greater or less number of skins during the season, and these are mainly shipped to Edmonton or the jobbing houses at Winnipeg.

Winnipeg is to-day one of the largest fur markets on this continent, and all the great American and Eastern Canadian fur houses have resident buyers here, and not a few Old Country houses are also represented.

The plan on which the furs is sold is always by tender. Any house having furs for sale notifies all the fur buyers. The buyers go and examine the lot, and then put in a written tender. At the time stipulated these tenders are opened, and the highest bidder gets the furs. The competition is very keen, and furs fetch the very highest market price in Winnipeg; in fact, they have been known to bring better prices than at the great London sales.

The kind of furs chiefly sold on the Winnipeg and Edmonton markets are mink, muskrat, beaver, otter, marten or Hudson Bay sable, fisher, silver, black, white cross, red and grey fox, wolverine, lynx, wildcat, badger, ermine, coyote, wolfe, black, brown and polar bear.

With the exception of the coyote and the badger, the good furs come from the wooded districts. Very many of the finest furs sold in Winnipeg come from the heavily-timbered country around Lake-of-the-Woods and Lake Winnipeg and Manitoba.

AN AXE FIRM'S PROFIT-SHARING PLAN.

A PENNSYLVANIA axe manufacturing firm has recently put into operation a plan for sharing profits with its employes. Knowing the interest that is taken in profit-sharing schemes by many business men, HARDWARE AND METAL herewith reproduces in part the circular which the firm in question sent out to its employes acquainting them with its intention.

THE PLAN.

The fair value of money is the rate which money commands in the market on the average, without involving considerable risk or the expenditure of considerable labor. This average is recognized by practice and by law as 6 per cent.

But money invested in the axe business must earn more than 6 per cent. to cover the special risks involved, such as accidents, fires, losses from credit and other manufacturing contingencies, for otherwise no one would invest any money in the business. This risk or loss is usually covered by the accumulation of a surplus or contingent fund of not less than 2 per cent. per annum.

Therefore, before we have earned any actual profit from the axe business, we must earn

1. The fixed or competitive value of labor.
2. The 6 per cent. recognized and legal value of money invested, and
3. Two per cent. contingent or risk fund.

Any such earnings above the fixed or competitive value of labor as above stated, and above the fixed or fair value of money and risk as above stated, may fairly be regarded as actual profit in which both labor and capital have the right to share equitably.

Believing it to be both right and wise, we therefore propose to hereafter divide equally with our employes (exclusive of officers) the actual profit as above explained—that is, all profit in excess of 8 per cent. on our full paid capital stock, this division to take place in January of each year, covering the business of the year preceding. Every employe who has been in the service of the company continuously for four months preceding the end of the year is to participate in the profits in the proportion of his earnings during the year with the aggregate earnings of all participating employes for the entire year.

For illustration, assume that John Doe earned or drew during the year regular pay amounting to $800, and that the aggregate paid for all labor for the year was $48,000, his share of the actual profit would be one-sixtieth. If one-half of the actual profit were $6,000 his share would be $100, or equivalent to 12½ per cent. increase on his fixed or regular labor rates. If one-half of the actual profit were $12,000 his share would be $200, or equilalent to 25 per cent. increase on his pay for the year.

In view of the past profit record of our business, in connection with the great savings and improvements which should grow out of the interested co-operation of our employes, which this liberal and equitable proposition is believed to assure, we know of no reason why our employes should not, by virtue of this arrangement, add from 10 to 30 per cent. to their income according to the general conditions which may prevail. You will note that the stockholder alone assumes risk of loss.

It is also directed that any employe may become a stockholder of the company if he should desire to do so, and provision is made to secure stock in limited amount for any employe, in lots of two shares or more, if subscribed for prior to April 1, 1903, at par, or $100 per share, although its market value is much more, than 10 per cent., or more to be paid when the stock is subscribed for and the balance in payments as may be desired within two years, with interest at 4 per cent. on preferred payments; provided, however, that no employe shall sell or offer to sell stock so acquired within two years after purchase thereof without first offering same for sale to the company at its par value, and that any stock purchased under this proposition shall be immediately offered to the company for redemption at its par value, should the holder thereof cease to be an employe of the company within two years after the purchase thereof.

Having thus provided opportunity for every employe to share equitably or fully in the profits of the business, we of course expect the fullest co-operation of every one concerned—full time when orders are in hand, increased care in workmanship, the practice of economy in all details throughout the factory, opposition to workmen who by carelessness, inability or dishonesty do not do their duty and thus injure those who do.

BUSINESS AND ITS MANAGEMENT

Hints and Ideas of Interest.

PRICING HARDWARE STOCKS.

By H. C. Scofield, Sturgeon Bay, Wisconsin.

YOU are all familiar with the old maxim of "Goods well bought are half sold."

Now, I have contended that it is just as necessary, in order to make a proper showing at the end of the year that your merchandise be plainly and systematically priced or listed, as it is to have it well bought. I claim that by so doing you are assisted in buying as well as selling to an advantage. A ready reference to your cost is often the means of getting you a better price in buying, for by comparison of your last costs with a salesman's quotations you know exactly what you are doing and he is almost certain to strive to make a favorable showing. So much for buying.

Now, in selling, it certainly inspires confidence in your customer when you can promptly, and without any hesitation, furnish him with a price and

AN EXACT DESCRIPTION

of any article in your stock. It is just as certain to create a feeling of distrust when you are at a loss to know what your cost and selling prices are and are obliged to look up some old invoice or hunt for some nearly obliterated character on the article or on the nearest wall or shelf. The customer is very apt to question in his own mind whether he got the right price or not. In many establishments some one clerk, who, by his attention to details and faculty for remembering, is generally looked to for information as to prices, stock, etc. You have no doubt heard one salesman call to another, "Say, John, what do those crowbars sell for?" John is no doubt busy with another customer, and if he does not have the price in mind he leaves his customer to help find the price of crowbars. Possibly the price is not found and is guessed at, or some old price at which the goods were sold before the advance is quoted, and a profit is lost where one ought to have been made. This is only an instance of what could happen or possibly is an actual occurrence a number of times a day.

In the matter of pricing up an inventory, a system of pricing is an absolute necessity if you would come anywhere near the value of your stock of merchandise. After you have perfected such a system it is very little labor to keep it up. Nothing that you can do will keep you better posted than comparing and changing the prices in your price books from your invoices. This is

OUR METHOD.

We had made to order a set of five price books; we started out at first with but one book, but, being rather bulky and being handled so much, it did not wear very well, and again time was lost by one clerk waiting for another to get through with it. We had the books made 7x9 in., of the best quality of paper and bound in stiff leather covers, flat opening. We would recommend that the loose leaf style of book be used, so that a leaf torn or worn can be replaced at any time. The books are indexed through with leather index tabs; these tabs project at the edge of the book, so that it is not necessary to touch the pages if the fingers are soiled. The pages are ruled with columns for list, discount, net, job and retail prices. The sizes and descriptions of the articles we write in ink, the list and prices are written with a fine, hard pencil that they may be readily erased for changing. We select illustrations of the articles from our catalogues; you can generally find anything you want in the catalogue house's lists; these are better on account of being smaller and the paper thinner; we make use of the pictures for the reason that when several articles of the same name are listed for instance, wedges—our most inexperienced help could tell from the picture, if he could not from the description, which pattern sold at 5 and which at 10c. per lb. Getting up these lists is very interesting work for quiet days or evenings.

OUR LISTS ARE CLASSIFIED

as a general list, fittings and plumbing, paint, pump and stove department. In the general list we keep all lines that do not properly belong to the other lines; in the pump list we devote one page to each style of pump, and on the same page we list such repairs as we keep in stock for that particular pump, such as handles, caps, etc. The stove list is made up with a stub leaf between each page, to the stub we paste the page taken from the manufacturer's list, showing the illustration and description of the stove; on the ruled page we insert prices, costs, etc. From this page linen tags, printed with spaces for cost, selling price, oven and fire-box sizes, are made out and attached to the stoves. The stove book is really more for the buyer's benefit.

Goods that we keep in shelf boxes are priced on slips of cardboard tacked or pasted to the side of the box or bin; these slips are ruled off in the same space as the pages of the lists, and are corrected or changed when new goods are added or prices changed.

Guns are priced by attaching by strong cords a linen tag printed with spaces for the caliber, weight and length of barrel, cost and selling price.

These books we keep in an accessible place near the telephone, so that there is no delay in quoting a price when taking an order.

A BULLETIN SLATE.

We keep in a central place where the salesmen can all see it a common school slate. This we have divided into two spaces. The upper part we have headed "Advanced" and the lower space "Declined." When a change in the price on staple goods, such as nails, wire, etc. (these prices being generally memorized), is made the name of the article is written under the proper heading. This slate is, in fact, a bulletin board, which gives immediate notice of the change. No prices are placed thereon, simply a notice of change.

In making any change in the price books, especially the more staple lines, we also enter the date of the change. This is convenient in cases of a dispute of price afterward.

WE KEEP A FILE OF ALL QUOTATIONS

that we receive and all catalogues and lists received from the different manufacturers are kept accessible so that we can in a moment look for anything that is called for that we do not happen to have in stock. Our experience here [illegible] and it is often the means of [illegible] orders for articles that [illegible] profit. In pricing [illegible] there is one [illegible] and it must not be lost sight of, and that is

your competitor. His views as to what goods might be sold at are not always in accord with yours, and it sometimes happens that there is cutting of each other's prices, the question of profits being lost sight of altogether.

DEALING WITH COMPETITORS.

As a remedy we would urge that you use a little tact and diplomacy and get better acquainted with him; he is not such a bad fellow as you imagine him to be. Your interests are almost identical with his, you both are entitled to fair profits on your investments. With this end in view I would urge that if your competitor is here attending this meeting (if he is up-to-date and a formidable rival, he is no doubt here), that you get in touch with him; agree at least on the price of a few of the staple goods that you have been selling at little or no profit as a result of your rivalry for trade; stick to these prices; do not take advantage of the situation to get too large a profit, but a fair-to-all return; it will be more liable to endure and will be more satisfactory to all concerned.

TRAVELLERS AS CREDIT MEN.

THIS is the day of commercial travellers. Co-operation and association in prices as well as other changes in trade methods, have obliterated most of the old lines of competition, and it is probably not any exaggeration to claim that more than half the sales of jobbers and manufacturers depend on the personality and selling ability of their accredited agents. A competition in personality, if you like.

There are very obvious reasons for this, the first and most natural being that the traveller is the sole point of personal contact the customer has with his supply house. Postal conveyance, while a very necessary, and in our country a highly satisfactory mode of communication, is, at best, a formal and very impersonal agent; so that, smooth and diplomatic as we may make it, correspondence is bound to be pedantic and stilted more or less, according to the skill and sensitiveness of the writer. We cannot write to a man we do not know, and so we set up an impersonal proxy and address it in the commonplaces of commercial phraseology. This may be varied annually, say, at Fair time, by a formal handshake, but the time and conditions are not favorable to anything like acquaintance. This is a limitation on both sides. The traveller, however, makes up this deficiency very largely. He is on a different plane with his customer, has a different access to him, touches his more intimate person, sees him in his own store in the atmosphere where he is "at home" to all the world, if need be—and in this way they meet and talk in the capacity of friends. Thus the traveller becomes the confident of the customer equally with the house he represents. The retailer, for instance, looks to the traveller to "take care" of him, keep him posted on "inside" market tendencies, and to see that he is furnished wish the "good things" that every traveller has for his customer.

The jobber, too, learns his customer through his traveller. He almost relies on the impression the traveller may form of his character, habits and business ability, and, to a certain extent, very wisely, too, governs not only the customer's credit, but his business policy through this medium.

This brings us to the consideration of the traveller as a credit agent. In spite of what we have said, there are two serious limitations to his usefulness in this direction. First, he is out to sell goods, and, second, in very few instances has he had any training to enable him to understand the value of "figures." Common sense may make up for the latter deficiency somewhat, and does; while a remuneration on a basis of territorial profit might regulate the former.

However, commonsense does not always reveal a state of premeditated insolvency, for instance. Business in the store may be brisk, goods moving freely and system and good order manifest everywhere. These are some of the appearances on which his judgment must be based, and they may be reliable or not. That it would interfere seriously with his selling chances if too pertinent questions were plied, or he betrayed a feeling of less than confidence in his customer's credit ability goes without saying. He follows his instinct here, and this generally leads him to avoid altogether what may prove a disagreeable subject, and at once the impersonal character of the house, perhaps, comes in to good advantage.

His impression, however, based on his knowledge of character, and ability to read it, are available to assist and do largely assist credit inquiry and give credence or not to mercantile information.

As a brake on too sanguine credit, we have suggested remuneration on a basis of territorial profit. This basis is actually adopted by many leading houses and practically, in principle at least, applies pretty generally. It isn't an absolute safeguard, however, because of the disparity in risk—the traveller staking his small per cent. against the merchant's 50 or 60 per cent.

However, the broader principle prevails—that the traveller has to make his sales show profit, as well as bulk, otherwise his reputation is gone.

Looking, then, at the traveller's intimate relation to credit, and the happy business results in this country, we can only conclude that, as a class, they represent a very high grade of business intelligence and insight.

WASTE IN THE BUSINESS.

A TACTFUL business man exercises discreet economy in the conduct of his commercial affairs. It matters not how large or extensive his interests, or how liberal or even extravagant his tendencies at home or in social life, remarks Wall Street Summary, he does not permit wilful waste of anything in his store, manufactory or counting room, no matter how insignificant that waste may be.

If he be a thorough disciplinarian, he borders on what may be termed by some as small or unreasonably mean. Such a man is not usually illiberal in providing all requirements for a proper conduct of his affairs, nor is he disposed to underpay his help. What he wants, and rightfully demands, is that those who are paid to advance and protect his interests shall not be too extravagant in the use of what belongs to him and not to them. Because of this economic characteristic and for the reason that for every dollar that he expends he wishes full value, not only in direct returns but in the use thereof, he is generally successful, and is thus enabled to be liberal in his domestic and social life.

Too often we find a clerk or employe who recklessly uses expensive office stationery for memoranda; who never regards cord or twine once used as useful a second time; who feels that, no matter how short the distance, car fare amounts to naught; who unreasonably telegraphs or telephones here and there, though each message must be paid for; who throws pins, paper fasteners and rubber bands into the waste basket with discarded correspondence, and who, in short, does not realize that a "penny saved is twopence earned." These acts of indifference, each in itself, are of no moment, but in the aggregate they figure up a tangible sum, if not a large amount. It is not so much the money involved that should be considered, as the reckless disregard of the employer's welfare.

The man or woman who would criticise an employer for exacting economy on the lines set forth would be as much justified in regarding as proper or prudent the reckless throwing away—not expending of nickels or dimes by our prominent capitalists, contending that the small currency is too insignificant to carry about the person. It behooves the employer, no matter in what line of trade,

---

HINTS ON ORDERING BUILDERS' HARDWARE.

By Hermit.

FEW dealers seem to realize the number of hands through which an order for hardware must pass. Neither does he usually note many minor details which are absolutely necessary before any progress whatever can be made upon his order. Our salesmen are also singularly unfortunate in omitting details required. The dealer may at least find some consolation in this fact.

The office force is divided into many departments, each of which handles its own work and nothing else. This readily distributes a large amount of work in such a manner as to make it possible to handle same in a comparatively short time. One of the first principles is that all correspondence must be answered upon the same day that it is received. Occasionally cases will occur where it is simply impossible to secure all the data required in so short a time. In such a case the communication is acknowledged with advice that information will be furnished later. We will mention right at this point some of the details most usually omitted.

If you order locks that are not reversible, always give the hand and thickness of doors, especially of cylinder locks.

Always state the finish wanted. If the finish is anything unusual, send a sample of what is wanted.

If you order knobs, specify whether rim or mortise. If the latter, whether with or without roses.

Try to order quantities as they are billed. For example, sheaves are priced up by the set. Do not order by the dozen, as some will lead to confusion.

Do not try to see how many items you can get upon a line. Rather take a separate line for each item.

If you place an order for an office building, hotel, house, or, in fact, any building, get all the details before order is placed if at all possible.

If master-keyed locks are used, explain the master key system in detail. This is very important. Much valuable time is wasted on such work. For example, you order master-keyed cylinder locks for a building, omitting the hand for one or two doors. It is necessary to hold the entire master key system for the detail of these two doors.

If you have been previously quoted a price upon an article, refer to same upon your order. The order department is entirely separate from estimate department, and possibly may know nothing about a price being quoted unless you refer to same on the order.

Remember the old principal, "Address all correspondence to the company."

Do not think your order is the only one at the factory. You have troubles of your own when you cannot satisfy your customer by prompt delivery of an item. Probably 50 other parties write to the factory the same day as you do for the same item, and all must receive attention.

Do not wait until the last minute to order trim for a house. At least four weeks is usually required for such an order.

Do not confuse different makers' numbers. That is, do not order "Corbin" goods and specify "Sargent" numbers.

If shipment is to be made direct to your customer, write name and address very plainly to avoid the possibility of the goods being sent to wrong destination. Such places as Washington, Springfield, Newark, etc., are located in many States.

By following the above instructions you will make many a clerk's life less miserable and save much unnecessary correspondence.

THE VALUE OF SYSTEM.

By Howard P. Wellington.

THE motto for every successful enterprise to-day should be, and it is, to a great extent, "Be Progressive," or, in other words, "keep up with the times in which you live."

The tendency, however, with concerns who have been in business for a number of years, and who are also doing an immense volume of trade, is to stubbornly adhere to the old methods which have been in vogue for the past 50 years, contending that as a certain amount of success has attended their efforts so far, no change should be made. Especially is this the case in regard to office systems.

By adopting an up to date system and arranging the accounts in a systematic manner, statistics may be obtained in regard to the business which are simply invaluable to every progressive business man; excessive expenses in certain departments, small profits on certain lines of goods, heavy purchasing, slow sales, may be instantly localized by a systematic arrangement of accounts and methods.

There is, of course, in some instances, such a thing as "too much system," but with reasonable care and commonsense this may be avoided.

Every new system which is put upon the market should not be adopted, as, in some cases, it will necessitate increasing rather than decreasing the staff of an office, but there are, without a doubt, systems which will give far more satisfactory results at a greatly reduced cost than the methods now employed by so many of our leading commercial houses.

Conditions have changed wonderfully within the last few years, and office methods and systems must change accordingly to keep up with the new state of affairs, although it is quite natural for the office man who has been running in a rut for so many years to have a prejudice against anything new in this line.

There are retail merchants running monthly accounts with customers right in our large cities to-day who do not, or will not, furnish a bill of goods with each purchase. What satisfaction is there for the customer to have a large itemized bill rendered irregularly, sometimes a month after the goods were bought?

Suppose the wholesale merchant sent a lot of goods without an invoice. What would happen?

The cost of duplicate cash, sale and charge books is so small that every dealer should use them, and it would be much more satisfactory, both to the dealer and customer.

Don't be too severe on "New Systems," as they are called; give them a fair trial and they will usually prove their worth.

A FORMULÆ FOR SUCCESS.

The man who prescribes for humanity a sure method of attaining success, which could be applied by everyone, would soon be able to charge such a fee and would have such a practice as no popular lawyer or physician ever conceived. Yet, a New York firm have given to the world the formulae which has contributed to their prosperity. It is as follows:

30 per cent., Patient, persistent dig, dig dig at it every minute.
30 per cent., Reputation (founded on fact) for honest dealing every time.
10 per cent., Luck and fortunate circumstances caught on the fly.
20 per cent., Snap.
10 per cent., More persistent dig.

---

100 per cent.—SUCCESS!

To work out this formulae a man wants a clear head, as little worry as possible not any, if he can help it.

HARDWARE ADVERTISING

By A. B. Caswell.

OF all the store trades, I believe the hardware merchant is the smallest advertiser. His grocer neighbor runs bright ads. each day, giving to the public a tempting list of seasonable things to buy. His dry goods neighbor is a liberal

ARE YOU READY FOR WINTER ?

How about Radiators ? There are many in the market, but none better than the

"Safford" Radiators.

Adjustable to steam and hot water, they will diffuse a grateful, healthful and comfortable heat in any building in any weather.

They are **Ornamental, Serviceable** and **Economical,** and come in all sizes and styles. They have perfect joints and never leak.

Prices Range $.... to $ ...

No. 1—A GOOD AD.

user of space, the local papers being filled with bargain lists. But the hardware merchant does no advertising at all, or, if he does, is content with a little space rarely, if ever changed, and generally setting forth that his store is "the best place in town to buy shelf and heavy hardware cheap." He seems to think that it is not necessary to advertise in his line, that his business will somehow or other run itself.

Let me tell you you are laboring under the biggest kind of a mistake. No business is so large or strong that up-to-date methods of competitors will not hurt it. Advertising is one of the foremost of up-to-date business methods, and he who spares printers' ink will sooner or later, but so surely come to feel that it is false economy.

SEIZING THE OPPORTUNITY.

On the other hand, what a field awaits the enterprising hardware merchant who would seize the opportunity and so push the sale of his business. Right now there are dozens of articles he might advertise with good results. With the advent of spring there is the demand for paints, oils, glass, etc., between which might be sandwiched dozens of little articles for house-cleaning time, such as carpet beaters, tack hammers, door mats, etc. The merchant with his rakes, hose, spades and list of garden and farm implements should be sharpening his lead pencil to grind out good copy. In many cases he carries seeds and bulbs and whatever else the average suburbanite or farmer may desire to make mother earth bloom and blossom with natural products, and he has a variety of subjects to talk upon. The opening of fishing season might witness a few good ads. on fishing tackle, followed by general sporting goods. Hardly is this past when the lawn mower appears on the scene, or the gas or coal oil stove, the hammock, the window screen, the flynet, the scythe, binder twine, etc. Then pretty soon it is time to be preparing the public mind for heating, for, as you know, the days begin to shorten and to cool. That furnace, that radiator, that kitchen range, that parlor heater, etc. And so on, presently Christmas goods come into view, skates, cutlery, silverware, etc., and there are sleigh bells, lap robes, horse blankets, and the one hundred-and-one other things which my humble vocabulary refuses to name, but which the hardware merchant knows so well.

SOME GENERAL RULES.

In advertising hardware the same general rules that apply to the other forms

The Centre of Attraction

Stoves,
Ranges,
Furnaces,
Radiators,
Shovels,
Rakes,
Hoes, etc.

P.S.—A new arrival of Scythes, which will be sold cheap during the haying season

No. 2—THE OTHER KIND.

of advertising, of course, prevail. In brief, they are

1. To say something definite about the good qualities or price cheapness of the article advertised.

2. To be timely for each advertisement to be nicely adjusted to weather conditions.

3. For the advertising to be sincere, honest and succinct liberal enough in space without being extravagant, and brief enough without being stingy.

OUR STOVE HOSPITAL

serves the same purpose for stoves as an ordinary hospital serves for human beings. It is in charge of an experienced stove surgeon, who, with a staff of trained assistants, devotes his whole time to stove repairing. It costs less to have repairs done properly by experienced men than the tinkering up by amateurs, because the former will do better work in half the time taken by the latter.

Shall we send one of our stove surgeons to see about your stove? He will give estimates and full information for your asking.

No. 3—A CLEVER ADVERTISEMENT.

All of which, although self-evident, are important enough to be here repeated.

THE RIGHT AND THE WRONG WAY.

From a certain paper I have clipped two advertisements on stoves and heaters. No. 1 shows the right way to advertise—No. 2, the right way not to advertise. The advertiser who pays his good money can take his choice.

This advertisement tells what the radiators will do and cost. With a cut, it took up a space of 10 agate lines (double column wide.) Variety and additional information could be given in the succeeding advertisements by telling whether or not they would be put up free of charge, how much room should be given them in certain sized rooms, their different styles of finish, and testimonials from hotels, public buildings and prominent private dwellings. (Testimonials are always good, whether for articles of household use or personal requirement.)

No. 2 is the other style ad. [illegible] strange to say, is still the style [illegible] many merchants, not only in [illegible] tions, but in many good-sized towns.

Although October is [illegible] to bright visions of [illegible] colors, although the [illegible] is well past, there is an [illegible] that covers

a great variety of articles and says nothing about anything. The upper portion [illegible] needs, the rake [illegible] of planting and harvesting [illegible] the section of July [illegible] It stands for 12 months in the year and aims to be good every month in the 12. It is not useful even a minute. It takes up the same space as the sample preceding it. Through the lines you can almost see the local editor persuading the local mercantile magnate to advertise,

LIKELY TO BRING BUSINESS.

which the latter does after repeated promises and much wrestling with a lead pencil and a piece of brown paper.

A PAINTED ILLUSTRATION.

While touching upon store advertising, I avail myself of the opportunity of presenting a clever advertisement—No. 3—which serves to give a very pointed illustration as to what may be accomplished by reasonable application.

THE WRITING OF ADVERTISING.

THE best way to learn to write good advertisements is to read good advertisements.

I have heard it said that the art of advertising is merely to present attractively the absolute truth concerning goods that are to be sold

We suppose that successful advertising consists in deciding how much you can say in praise of an article without damage to truth, and in saying what you have to say as attractively and as convincingly as possible

Whatever you do, beware of too much humorous advertising The man who wants to buy a stove wants a stove and not a joke. You can never convince him that your stoves are as good as your jokes, no matter how good your joke may be. Simply say as earnestly and solemnly as you can: "I have good stoves for sale cheap." That is what the stove buyer wants to know. You may lead up to this statement as attractively as you choose, but that statement wants to stand out more distinctly than any other part of your advertisement.

Be earnest in your advertising. Believe what you say Say only what you believe.

Truth and earnestness! Think of them long and hard. Paste these two words in your desk so that every time you sit down to prepare advertising copy they will meet your eyes. They are synonymous with sincerity and thoroughness — two qualities inseparable from success.

If you are earnest and truthful in your advertising you will undoubtedly be earnest and truthful with your employer and business associates. Earnestness in your work will cause you to study how you can save your employer's money or your own.

Study clearness of expression. Let the reader catch your meaning in the shortest possible time.

Although compiling and studying ads. in the same line of business is advisable to start a suggestion or a series of ideas, yet, do not depend too much upon outside aids. Train the mind to take the initiative and with its own strength follow fully a line of thought. The mind can be trained as well as the body. Will, memory and different brain qualities can be so strengthened and developed that what at first appears impossible presently becomes easy.

ADVERTISING A NEW STORE.

TO the man about to open a new store, I would say: Make all your advertising arrangements several weeks in advance of your opening. Do not wait till the last minute, as many do. Get the best rates from your local papers, study their circulations, be unmoved by personal representations from anyone on this, but go about it just as cool and businesslike as though you were buying a lot of goods. Get the best newspaper space at the lowest price and have it understood in the contract that you are entitled to a certain number of lines of reading matter.

OF INTEREST TO THE LADIES.

Have a single-column good line cut of your store made. Have electros for each paper. Lay in your stock of cuts beforehand and have the ads. well prepared in advance. Try and have the newspaper "boys" around your store on the opening night and give them particular courtesy. They will appreciate a typewritten "story" of the affair, and even if they will not use exactly the "story" thus prepared, they will get the points they want from it to dish up in their own language. Save them the bother of taking notes.

A GOOD GENERAL AD. FOR A PLUMBER.

Have a cut made of the concern's name. A good catch phrase, if stuck to, is all right. In your opening ad. dilate more upon your accessibility and modern methods rather than upon your prices. Items and prices will follow in due time after the opening.

If you put in a new show front or add a new wing to your store, you are entitled to raise a disturbance about it in your local advertising columns. You ought to be able to get a picture of your improved establishment and quite a bit of reading matter about your enterprise and success. If your local paper does not enthuse about the cut and the reading notice, and it is surprising how cold and distant some become on such occasions, tell its publisher you will have a nice, single-column cut of your new establishment made by a city cut concern and you will be satisfied if he run the cut with a few sticks of reading matter, and he surely would not object to that. A new cut of one of the town's establishments is nearly always welcomed by the local publisher, as it shows the growth of the town, something in which he naturally takes pride.

You could use that cut in your ads., circulars, stationery, and other advertising matter afterwards. You could get up a sale on the strength of your new

COURAGE IN ADVERTISING.

By J. Troy

THE merchant who commences a campaign of advertising without the courage to carry it through should be dissuaded from beginning at all. Like a military campaign, it is not, as the old soldier said "All beer and skittles." There are reverses, defeats and seeming losses in the career of the most successful advertisers as there has been in that of the most successful generals. The chances of war are occult. The winning side can often show the greatest scars and the smallest roll-call.

But, just as no general of any military training or experience would give up the campaign after one or two reverses, neither should any advertiser feel discomforted or discouraged because his first, second or third trial cost him more than he received from it. Here the chances of advertising are occult. The weather is often the sole cause for a good and costly ad.'s failure. Many a "bargain" sale has been ruined because of heavy rains or extreme cold on the advertised day of sale. Hundreds of dollars perhaps sunk in newspaper space that brought next to no returns. Does the astute dry goods merchant give up business or stop advertising because of such a set back?

Not much. He knows perfectly well that neither the ad. nor the mediums were to blame. On the weather alone the responsibility rested, and as his action was unforeseen, there is nothing to do but "grin and bear it."

A man is often ill-advised when he takes his own advice, and frequently when he listens to others. I have known a really good advertisement completely spoiled by being placed in the wrong medium.

Every man in busines before starting an advertising campaign should consider carefully the mediums best suited to his business, and select those which stand best with the persons whom he desires to reach—mediums of wide circulation and sterling worth.

Every intelligent business man must recognize the fact that advertising is not a matter to be let out to the lowest bidder. It might be so if all papers were of equal value as advertising mediums. But with this value in different publications ranging from nothing to the highest figure, it is contrary to the first principles of business to take the one that will do the advertising at the cheapest rates. It would be about as sensible to put in office men who might bid the lowest for the place.

Fancy a great railway corporation, a bank, or an insurance company, selecting its president and other officers by competition bids, without regard to their qualifications, or the manager of an ex

THE POST CARDS ARE ALL ON EXHIBITION AT OUR STORE. COME IN AND SEE THEM

A. W. HUMPHRIES & SON

An attractive advertisement of A W Humphries & Son, Parkhill, designed and written by W. Norman Humphries The above is one-half the size of original

tensive mercantile or publishing house, or a lawyer in a suit involving millions of dollars, being selected because he is the lowest bidder. The purpose in all such cases is to secure the best services for the prices paid—the best returns for the money spent.

So it is in the advertising world, papers which charge the highest price for space are often the cheapest, because of their wide circulation.

If the timid advertiser "makes a bad break" at starting, or his efforts are nullified by any of the accidents of advertising he stops short, declares such a drain on his finances would ruin him, and joins the ranks of that surly crowd which annoys the business world with its claptrap about advertising not paying.

Courage—courage to stick to your post—is as essential in advertising as in military warfare. You would despise a soldier who fled or laid down his arms at the first shot from the enemy's guns, and you can't admire the advertiser who has not "sand" enough to persevere after a slight reverse.

Train your advertising guns on the buying public; if you fail to reach them a first time, try a second or third shot of printers' ink. It is only a matter of keeping at them for a short time until they shall see fit to come to your place of business and surrender their dollars to you.

Be wise in the selection of the mediums you use. If you are in the retail business use the daily newspaper, as it is the most direct way of reaching the consumer. If you are a wholesaler, jobber or manufacturer, and desire to reach the trade, use the trade paper.

But be sure and choose papers of standing and sterling worth with extensive circulations.

AN OCCASIONAL WRITE-UP.

By Mac.

The retail merchant who advertises is the mainstay of the town or village weeklies; the publisher of the weekly is consequently always freindly to the retailer and ready to oblige him in any reasonable manner.

This friendliness opens to the merchant privileges which are of value, but are sometimes neglected. One of the most valuable of these privileges is that of inserting, from time to time, reading notices, regarding the store or business.

Items regarding new agencies secured; descriptions of new goods on the market; alterations to premises, etc.; changes in firm or staff; in fact, anything that is "news," is appreciated by a progressive editor, who would be glad to publish the same gratis.

Items regarding increase in business done, special prices offered, large purchases of stock, or anything which is not really "news," but which you would like the public to know about, can generally be inserted at from 2 to 10c. per line.

While display advertising should never be neglected for the casual reading notice, yet, the latter should be made use of as frequently as possible. This is done today by a score or so of the most progressive retailers in Ontario and results have, it seems, justified the habit in every case.

NOVA SCOTIA STEEL & COAL CO.

Expansion in the Hardware Store

By D. O. M.

Increasing Profits by Developing a Demand for Special Lines

CANADIAN hardwaremen are, as a rule, enterprising and progressive, desirous of extending their business in every legitimate manner, so as to increase their profits to the very highest point possible. The methods adopted to secure this increase are diversified, ranging from the old-fashioned habit of price-cutting competition, in the hope of getting a rival's customers, to the modern idea of "developing new business."

The value of advertising, attractive window dressing and interior display is unquestionable, but the vital consideration is what to advertise and display, what lines can be pushed to greatest advantage, which offer the best returns for time and energy devoted to them.

In the average town or city in the older sections of Canada the demand for staples is limited within certain bounds by the requirements of the district, and the competition for this trade is always keen; therefore, to effect an appreciable expansion in the sales of staple lines one must offer better terms to the customer than one's rivals. This inevitably leads to retaliatory action by these rivals, with the result that the margin of profit is cut so close that while a greater volume of business may be done the aggregate net profit may not be increased materially.

What is, then, the most natural way to increase the net income from a retail hardware business? The experience of many successful retailers, particularly in the towns, villages and smaller cities, has been that time, thought and energy devoted to extending the number of lines carried and in developing a demand for the new lines brings most satisfactory results.

HOW ONE FIRM BUILT UP TRADE.

For instance, it has been found by one firm that when they made a special attempt to push goods handled by their competitors the latter were ready to meet every move they made. The members of this firm were ambitious and enterprising, but had not as much capital as either of their nearest rivals. They had about concluded that they had reached the limit of their trade when they decided to stock some goods not then sold by any hardwareman in the town.

In this experiment they had not much faith at first, and so did not push the new lines as vigorously as they might have. But as the demand grew and as their competitors manifested no desire to follow them in stocking the special lines they paid more and more attention to these, yet never neglecting their staples, which will always be the foundation of a successful hardware business. The result was that in three years their income had increased more than 50 per cent., and had won the reputation of being up to date so that when customers failed to get what they wanted in other stores they generally went to the firm which was advertising such a wide range of lines.

The next step was to increase the range. After a careful study of the situation they decided to start a repair shop and to put a competent man in charge. This did not pay at first, but their faith was now strong, and they continued to advertise their repair shop until it now is one of the best and most profitable features of their business.

This firm's system of expansion, though started with hesitation, has given them all the scope their ambitions insisted upon and furnished an outlet for all their surplus energies and capabilities. To-day they are the recognized leaders in their locality and have a veritabe departmental store of hardware, metals and machinery.

AN AGE OF CONSOLIDATION.

What this firm has done scores of hardwaremen all over the country have done. The age is one of expansion, or rather of consolidation. In all walks of life people are busier in a greater hurry than ever and there is, in consequence a general desire to effect economies in time as well as in money. The farmer of to-day prefers to buy his dairy supplies, his barn, stable and kitchen hardware, his cattle and poultry feed, his harness and carriage hardware, his seed, farm and garden tools, and even his machinery and implements in one place. He has learned how aggravating it is to have to go to one store for a ball of twine, to another for a tin pail, a third for a whip, and possibly to some agent (who may or may not be at his office) for a plow point or for some paltry repairs.

There are, moreover, strong economic reasons why the departmental hardware store should exist in every town or city. The expense for clerk hire, rent, heating, bookkeeping, etc., in one large store is not nearly so great as they would be in three or four smaller stores carrying in the aggregate the same goods as the larger one. The same argument applies here and with as great force as that which has concentrated capitalists at the economic advantage of amalgamations and combines.

LINES TO BE HANDLED.

What lines can be profitably added to the hardwareman's? We shall take for granted that he already handles such lines as guns and ammunition, axes, belts, building hardware, cutlery, dairy utensils, electrical supplies, glass, paints and oils, garden and farm tools, stable and barn goods, wire and wire products in short, hardware generally. These lines have long been carried by the regular hardware merchants and are inseparably associated with the trade to-day.

Stoves, tinware, etc., are now recognized in many towns as regular hardware lines, yet in some places this is not yet the case. Where the two have been combined and stoves have been given their due share of prominence at the proper season, the result has been generally satisfactory, as stoves and tinware yield a good profit when properly handled.

Sporting goods, too, have in recent years become a favorite line with hardwaremen. The outdoor lines, such as lacrosse, baseball and football goods, croquet sets, fishing tackle and hunters' supplies are now principally sold by hardwaremen, and there is no reason why the indoor lines, such as ping pong, rocking horses, etc., should not also be sold in the hardware store. Skates, hockey goods and sleighs are practically altogether in hardwaremen's hands, as are also children's wagons and carriages.

Harness and saddlers' hardware is another line which has been steadily getting into the hardware retailers' hands. The local harnessmaker, like the local cobbler, is feeling the competition of machine made goods, and, as he in many cases refuses to handle the latter, they are now reaching the consumer through the hardwareman. There is a good margin in harness and saddlers' hardware, and the line is easily kept up to date.

Such lines as [illegible] hammocks [illegible] usually sold by the [illegible] and [illegible]

...ments in other branches of trade. But the trade in these lines naturally belongs to the hardwareman, who can generally secure the lion's share of the business in [illegible].

There are many other lines, such as cycles, farm implements, machinery of various kinds, builders' hardware, etc., which can be advantageously sold by the hardware retailer, but which are not now receiving in many towns as much attention from the trade as they deserve. The value of these lines will be considered elsewhere at greater length.

The aim of the hardware merchant should be, in fact, to become recognized as the natural, the most efficient and most economical retailer of all hardware, metals and machinery. He should be consulted by the manufacturer who wants new machinery as well as by the boy who seeks a new top. It is easy to sell tops; it is not so easy to secure an order for machinery, yet profit and reputation come to those who do the hard things in life. So it should be the ambition of hardwaremen to sell, in addition to the staple lines, those for which it is more difficult to create a demand.

Interior of H. E. Burtt's Store, Woodstock, N.B.

A WOODSTOCK, N.B., HARDWARE STORE.

Among the number of progressive hardwaremen who have developed their business by adding kindred lines, is H. E. Burtt, Woodstock, N. B. Mr. Burtt has been in business for eight years, five of which he has been sole proprietor. During this time he has conducted his business with such industry and enterprise that one of the local papers, in speaking of his store, said: "To all intents and purposes it is the supply headquarters of the builder, millman, lumberman, machinist, blacksmith, and the mechanic or artisan of every trade, as well as the draughtsman and sportsman, for within this model trade mart can be procured all the necessary supplies therefor as well as light and heavy hardware of every description, bar iron and steel included, this with heavy hardware and oils being located in the basement. Mr. Burtt also handles the 'Island City,' and 'S.-W.' paints, and also deals in stoves and kitchen furnishing goods of the best Canadian make, together with a large line of sporting goods, including guns, revolvers, ammunition and fishing tackle. Lime, cement, and Ryan's brick are essential adjuncts, and he is the exclusive agent of this section for the Bowker fertilizer, as also for the Walter Wood mowing and reaping machines, and withal sells haying tools of various makes and grades. Mr. Burtt also deals in carriages and farm wagons of home manufacture."

To this list of wares might be added iron and lead pipe, valves and fittings, belting leather and rubber, lamps and lanterns, for all these goods are included in Mr. Burtt's wide range of stock.

In addition to the main floor, an excellent view of which is given in the accompanying cut, the basement and the first floor are filled with stock. The heavier lines, such as agricultural implements and carriages, are displayed in four warehouses nearby. Two sheds contain the stocks of soft and hard coal carried.

Since the photograph of the store was taken several improvements have been effected. Sliding-step ladders have been put in and the system of wooden-shelf boxes extended. An elevator connecting the basement and the two floors has been found a great convenience.

LAMPS A PROFITABLE LINE.

"Should the retail hardware merchant handle lamps?" was a query put by a representative of "Hardware and Metal" to a leading wholesale dealer in crockery and glassware. "Why, certainly," was the reply. "In every section of Canada they are recognized as a proper hardware line. There is a good margin on them. They can be easily sold, particularly from September to Christmas. They add to a store's appearance. Moreover, in many towns they are not pushed as they should be, and so would yield good returns to the retailer who will give them the time and thought they deserve."

How to push a line like this is a problem with many retailers. One bright dealer makes it a point to see every householder in his town who either builds or moves, and tries to sell lamps, curtain poles, door mats, etc., for the new house. He has developed much new business in this way. Another merchant displays his finest lamps on a table, and during the fall season advertises them extensively. A city retailer handles lamps, gas and electric fixtures, and advertises himself as a "lighting expert," offering gratis advice as to what kind of lighting and what style of fixture is the most suitable for any purpose. A dealer in a town of about 4,000 population, runs a large advertisement in the local papers in October, suggesting to every housewife that she examine her stock of lamps, get new ones for the parlor and for general use and that new burners be secured, emphasizing the fact that a good burner will make all the difference between a really good light and an aggravatingly poor one.

SILVERWARE A PAYING LINE.

Many progressive hardwaremen have taken up the sale of silverware and are finding it not only an exceedingly attractive but also a profitable line, writes a correspondent of an exchange. The line is one that appeals to every householder and follows closely upon cutlery, and is considered more nearly hardware than many other kinds of goods that are to be found in the regular hardware stock.

The Christmas season is primarily the silverware season, although, of course, much in this line is sold in the spring and summer months—popular for Christmas gifts and popular for wedding presents. But as the largest sales are made a week or two preceding Chrismas, now is the best time to add this line to the hardware stock. In buying the first bill of silverware gauge your prospective business by your sales in other holiday goods. Do not put in too large an amount the

LETTER ORDERS RECEIVE PROMPT ATTENTION.

[illegible] season, but have sufficient stock to make a good display.

About three years ago an enterprising hardware concern put in a stock of some lines of silver plated ware especially for holiday trade. They found it so profitable and saleable that since a regular department has been made and a very complete stock is carried the entire year.

In speaking of this line in the hardware store the senior member of this firm said: It's a line that sells well through the year, of course, when a wedding occurs we notice an increased sale, and at the Christmas season we are very busy in this department. I would advise every hardware merchant, wherever practicable, taking up the sale of silverware."

Buy your first stock anyway of your local jobber. If he does not carry a complete line find some jobbing concern who does. Your jobber may have a retail store and in that case he can very much assist you and can give you good advice as to kinds of goods and styles.

The following six rules are well to remember when this line is added to the hardware stock:

1. Be sure you include in your stock some brands of goods that are well known.
2. Have a good window display of silverware.
3. Show your stock in an attractive manner near the front of the store.
4. Personally call customers' attention to the new line.
5. Be sure your prices are right, especially on well known goods.
6. Advertise silverware, and make it a point to let people know your stock is new and up to date.

PUSHING LYE SALES.

It sometimes happens that some of the smaller articles in a retailer's stock, if properly pushed, could be made to yield excellent returns. A simple case in point is that of lye, generally known as the universal cleanser. Lye is handled by hardware dealers, grocers and druggists, but if properly looked after, business in it should be done almost exclusively by the hardwaremen. There is no better substance than lye for cleaning sinks and outhouses, for use as a disinfectant, for spraying fruit trees, for softening water, making soap or for cleansing poultry yards, yet few people are aware of its real value for some of these purposes. It is a line that yields a good profit to the retailer; as it is neatly put up, it is easily handled, and as the retail price is 10c. it should be readily sold.

It would be worth while to devote a share of advertising and window display to such lines as this.

BUILDING MATERIAL AND SUPPLIES.

IT is a question if any branch of the retail hardware business is worthy of more attention than the sale of material and supplies for buildings being put up or repaired. As a rule, the hardwareman receives the order for paints and oils, varnishes, window glass, nails, door hinges, locks and knobs, eavetrough and cornices, etc. Stone, brick and lumber are generally bought by the builder through other channels. For this reason, the new departures in building operations, the use of structural iron in large buildings, of architectural sheet metal for practically every purpose in interiors as well as interiors; of expanded metal and concrete for floors, ceilings and walls; of ornamental glass, roof stains, etc., opens a fertile field for enterprise and business to the hardware retailer, the natural local agent for such materials.

The accompanying cut shows what an attractive appearance can be secured by the use of cement upon expanded metal. When expanded metal was introduced, plasterers objected to it, but as with cement, it formed the best-known medium for resisting fire and water action and at the same time was free from cracks and provided the best possible medium for decorative plastering and tinting, architects insisted on its use until now it is coming into general favor. The outer walls of the house shown are of cement-guaged mortar, applied to expanded metal lath. The cement gives to the combination the fireproof virtues of brickwork. Climatic influences have but little effect on it. Moreover, it is cheaper than brick. One plan of using these materials is to nail the expanded metal lath, without furring, directly on the wood sheeting. On the outside the plastering and stucco finish is added; on the inside, between the studs, a coat of mortar is put on the back of the lath. The inside of the studding is then lathed, either with wood or metal lath, when the interior plaster can be proceeded with. The cement and mortar is mixed in the proportion of three of sand to one of Portland cement, except for the first coat, when one half of ordinary haired putty, five of sand and one of cement is used.

The use of ornamental sheet metal for roofing, ceilings, interior and exterior walls, as well as for cornices, skylight and awning frames and many ornamental purposes in residences, hotels, stores and public buildings has, in recent years, grown in such a remarkable manner as to be well worthy of study. These goods are now made in such a variety of exquisite colors and designs and are adapted for such a range of purposes, useful as well as ornamental, that their growth in favor is but natural. As they take the place of materials, which the hardwareman does not handle, and as they can be readily sold from the superb catalogues sent out by the makers of these goods, the trade should be persistent advocates of their use. Every hardwareman in the country should possess and make the most intelligent use of such catalogues as are issued by houses making these lines.

An Attractive Cement Built Dwelling.

Another line, one which is not receiving the attention it deserves in towns and villages, is ornamental window glass, for which an agency should be secured by every hardware retailer. It is true that only a small proportion of persons building houses go to the expense of putting ornamental glass therein, but if a live hardwareman tried his best in every case to effect a sale of this line he would be surprised by the results within a year. It is a creditable characteristic of womankind to want to have her home as attractive as her neighbor's, so in the town where ornamental glass once becomes popular the sale of it will always be

CORONA

In some cases a well to do resident of the town might be persuaded to put in a window which would give to his [illegible] library or living room, a finish and tone which an oil painting of similar cost would not give. For vestibule doors there is often a demand for ornamental glass which could be catered to. It would not often be possible to sell glass like the larger cut shown, but windows like the smaller one are not hard to sell and soon become popular.

The arguments in favor of the use of "Luxfer" prisms are sound, as science and experience go to prove their real worth, especially for large buildings, such as factories, mills, stores and public buildings. When large buildings are being put up it would often be easy to effect a sale of prismatic glass, but unless the hardwareman makes the attempt to insure their use the matter may be neglected.

Then, for the interiors: Why should not the hardwareman, when a house is being built, try to secure the order for the furnace, registers, fireplaces, mantels, ironwork for staircases, etc., sinks, plumbing supplies, for wall paper, etc.? He is the natural distributor of these goods and will get the order if he knows the value of each article, its price and utility to the householder. But if he is not thoroughly posted he need not be surprised if the builder or contractor passes him by.

A PRACTICAL RETAILER'S OPINION.

IN an address before the Wisconsin Hardware Dealers' Association, Ralph M. Burtis, of Oshkosh, expressed his opinion on the advisability of carrying "Kindred Lines" as follows: "I believe that the hardwareman of to day must increase his saleable items in order to have the balance on the right side of the ledger at the end of the year. I presume some of us can remember the time when the ironmonger sold nothing but goods made from that metal, and should he be set down in the 'down to-date' hardware store he would feel very much out of place, and would long for his old way of doing business, but, it seems to me, that as conditions change our only salvation is to change with them, or else we find ourselves out of the race, and the business we ought to hold going to other stores.

"Cutlery and sporting goods are now to be found in a great majority of hardware stores, and are very closely allied to hardware; and here there is a great opportunity to widen out, for guns and ammunition bring a demand for hunters' clothing and camp outfits, for skiffs and row boats, until one is at a loss to know where to draw the line.

"Some of our number would not think of keeping store without plows, cultivators, drills, seeders, etc., and some even sell threshing outfits to their farmer friends. Seeds, too, can be added to these lines. We begin to see that the

Hobbs Mfg. Co., Limited, London.

farmer looks to us to furnish him most everything. By making good use of the plows, cultivators, seeds, etc., our farmer friend finds he has made enough to build

Hobbs Mfg. Co., Limited, London.

a home for his family, and he comes to the hardware store to buy nails and locks for his new house. As soon as he has decided on them he finds he can buy his sash, doors and blinds at the same store. He now must have a wagon to carry his purchases home and is pleased to find the enterprising hardwareman has a well-assorted stock of these from which he can select. A new harness comes next; here, again, the hardwareman has provided for him. He now buys a whip and some axle grease to make 'the wheels go around,' and after a time, if he finds the extra work his horses have had to do while he has been building has told on them, he comes back to his hardwareman for a tonic for them and so, while there is quite a difference between a cylinder front door lock of latest design, and a box of condition powders, yet the line of 'kindred' can easily be traced.

"Now our enterprising hardware friend turns his attention to the kitchen; here he finds he must be on his good behavior as he has the lady of the house to deal with. Of course he has the best range made, and after she has bought that she finds she must have new kitchen utensils to go with it. If he has looked well to his stock, she will be able to find everything she can think of that will help to make kitchen work a pleasure. Many a hardware dealer to day can not only furnish the cooking utensils but can supply the crockery and glassware as well, and it comes along naturally in his line. Then why not furniture? The same customer needs that too, and it is a kindred line to the other necessities of a well-regulated household. Many dealers are adding sewing machines and find them profit makers. Thus we see that the man who starts to build a home is the legitimate customer of the modern hardwareman and finds his store the natural place to look for all his household needs.

"The hardware dealer in the factory town finds he must carry belting, packing and hose, and a varied stock of mill supplies, if he would receive the best results from the class of trade he can secure. It is from the mills and factories that his tin and galvanized iron shop is made to pay the best; for they must have good work done and are willing to pay to have it well done.

"I will not try to exhaust the subject of 'kindred lines,' for there is no end to it, and only a lack of space, capital or ability, need stand in the way of the hardware dealer's adding lines to his staple hardware stock that will bring him profits and, as I said before, it seems to me that as we find less demand for some of the things that used to be sold at a profit, we must look around us for other lines which can be added to take the place of these, and if we do this I believe there is a broad field for the hardwareman and that he can do business with profit to himself and pleasure to his neighbors and live a prosperous and respected life in any community."

MERCANTILE LAW

A Study of its Different Branches.

By H. T. CANNIFF, Barrister, Toronto.

THE SUBJECT of mercantile law is a very comprehensive one, and, necessarily, in the columns of a newspaper one can but merely touch on its many different branches.

Before taking up the various heads of the subject it should be stated that mercantile law is derived from the law merchant, which had its origin long ago in the customs and manner of conducting business employed by merchants and bankers, which are now recognized by the courts because they are demanded by the wants and conveniences of the mercantile world. The law merchant was not made; it grew. Customs have sprung from the necessities and conveniences of business, and have prevailed for such a length of time, and to such an extent, that they have acquired the force of law through the sanction of the courts.

The mass of our mercantile law has thus grown, and will continue to grow, by successive additions, as necessity demands.

The changing conditions of modern life bring into existence different kinds of contracts and documents necessary for the proper carrying on of business, and, as soon as it is proved to be the general custom of merchants to use these new kinds of contracts and documents in the course of trade, the courts will recognize them as valid contracts and documents.

For instance, it is only in recent years that bonds of corporations were held by the courts to be negotiable instruments, like bills of exchange and promisory notes, and the courts did not thus rule until it had been shown that merchants and bankers dealt with them as they were accustomed to deal with negotiable instruments.

With these few remarks, we will now enter into the discussion of our subject, and as mercantile contracts are the theme of mercantile law, we should, at the outset, thoroughly understand the meaning of the word "contract."

A "contract" is an agreement enforceable at law, made between two or more persons, by which the right is acquired by one or both to certain acts or forbearances on the part of the other.

To fully appreciate the meaning of the definition, one must bear in mind that the word "forbearance" signifies "the act of refraining or abstaining from."

For example, if a debtor enters into an agreement with his creditors that he will pay them 50c. on the dollar, in consideration that they will accept this composition in full of their claims; here the contract is that the debtor is to pay the composition, and the creditors agree to accept it, and to forbear or refrain from claiming the balance of their claims. This forbearance by the creditors to claim the balance of their claims is the "consideration" on their part to support the contract.

The essential points which are required to make a contract which can be enforced at law are:

1. The contract must comply with the demands of the law with regard to its form.

2. The parties must be legally able to enter into a contract.

3. There must be a mutual assent of the parties to the contract; in other words, there must be a proposal by one party, and acceptance of the proposal by the other party.

4 The objects of the contract must be legal with regard to the first essential of a valid contract, namely, that the contract must comply with the demands of the law as to its form, it should be stated that there are two important kinds of contracts, viz., namely, simple contracts and contracts under seal, which latter class are known as deeds.

At common law simple contracts, with the exception of bills of exchange and promisory notes, did not need to be in writing, and could be made by word of mouth.

Bills of exchange and promisory notes, many centuries ago, were required by the custom of merchants to be in writing, and, in the course of time, this custom of merchants became part of the common law.

Thus it happens that bills of exchange and promisory notes are an exception to the old common law rule that simple contracts could be made by word of mouth.

But now, by virtue of various Acts of Parliament, there are many other exceptions to this old rule. These Acts were passed, as it was found that many frauds were perpetrated through false swearing by unscrupulous parties to contracts which were not made in writing.

One important enactment prescribing the necessity of certain contracts to be in writing is the statute known as the Statute of Frauds, which requires, in certain cases, written evidence of the contract in order to make it enforceable at law.

The fourth section of the Statute of Frauds enacts that no action shall be brought in the following cases, unless the agreement between the parties be in writing, and signed by the party against whom the action is brought, or by his lawfully authorized agent:

1. Any claim against an executor or administrator upon his promise to pay out of his own estate any damage owing by the estate for which he is executor or administrator.

2. Any claim against a person upon any promise to answer for the debt, default or miscarriage of another person.

Perhaps someone present is in a state of doubt as to the meaning of the preceding paragraph, and is especially nonplussed over the word "miscarriage." But he will find, on consulting his dictionary, that the word, as used here, simply means "failure" or "mishap," and signifies much the same as the word "default."

The contract referred to in the preceding paragraph mentioned is the contract of guaranty, so that every guaranty must be in writing.

It behooves, therefore, any unsuspecting merchant, who is about to sell goods to a person on the strength of the verbal promise of another person (known in law as a guarantor) to pay for them, to change his mind and obtain a written promise from the guarantor to pay for the goods.

3. Any claim against any person upon an agreement made in consideration of marriage.

An example of a claim of this kind is where a woman enters into a contract of marriage in consideration of a certain sum of money being settled on her by the intended husband or some other party; here, her claim is for the money to be settled on her.

This latter clause does not refer to a mere marriage contract, which need not

[illegible] no doubt, everybody knows.

A contract for the sale of lands, or any interest in or concerning them.

Any agreement that is not to be performed within the space of one year from the making thereof.

An agreement not to be performed within a year will not include an agreement which may possibly be carried out within the time, but it is uncertain, unless from its general tenor a clear intention may be deduced that its performance should be delayed beyond the year. So, also, if the agreement is to be performed within the year by one party to the contract, but not by the other, the contract is good even if it be not in writing.

The 17th section of the Statute of Frauds enacts that no contract for the sale of any goods for the price of $40 or upwards shall be allowed to be good, unless the buyers shall accept part of the goods so sold and actually receive the same, or give something in earnest to bind the bargain, or in part payment, or that some note or memorandum in writing of the bargain be made and signed by the parties to be charged by such contract, or their agents lawfully authorized.

Some other simple contracts which are required by statutes to be in writing are:

1. An acceptance of a bill of exchange.
2. An assignment of copyright.
3. Contracts of insurance.
4. Transfers of shares in an incorporated company.
5. An acknowledgement of a debt barred by the Statute of Limitations.
6. An acknowledgement of a debt contracted by a person when under age.
7. Conditional sales of goods.
8. Bills of sale and chattel mortgages.

There must always be a consideration for a simple contract to make it enforceable at law. By "consideration" is meant some gain to the party making the promise.

The court will not inquire whether the consideration is adequate to the promise, but will insist that it should be something of some value in the eyes of the law: and the consideration must be either a present or future one, but it must not be past.

An exception to the rule that the consideration must not be past is—the case of a debt barred by the Statute of Limitations, which is a good consideration for a subsequent promise in writing to pay it; another exception is the case of a person agreeing in writing to pay a debt contracted by him when he was under age, which also is a good consideration for a subsequent promise in writing to pay it.

Having thus disposed of simple contracts, we will now turn to contracts under seal, which are also known as deeds.

It is necessary that this class of contracts should be written, sealed and delivered, and in practice they are not always signed, although in olden times they were very seldom signed for the simple reason that writing was the accomplishment of the few, and the custom was that a person signified his assent to a deed by impressing his seal thereon. The writing of the deed may be by hand or in print, and on paper or parchment. In modern times the seal has become a wafer or a mere piece of wax, which has been previously attached to the writing, or, as is the custom in the country to the south of us, is printed on the deed itself, which manner of sealing a document has not yet been adopted in our own country. The party "sealing," touches it with his finger, and so adopts it as his seal. Delivery of the deed may be actual, by handing over the deed, or constructive, that is, by speaking words importing an intention to deliver the deed. As a rule, when the party executing the deed touches the seal, he says, "I deliver this as my deed," and this is sufficient delivery—though he keep it in his own possession. It must be said, however, that in the rush of the present day, when time, more than ever, means money, the above words are seldom used, but the deed is promptly handed over and the words are taken as uttered.

If delivery is made to a person not a party to the deed, subject to a condition, as, for instance, that it is not to operate as a deed until the other party to the deed pays a certain sum of money to the party making the deed, the document is called an "escrow," and then it takes effect only when the condition is fulfilled.

Contracts under seal differ from simple contracts in many respects. Contracts under seal are much more formal in character than simple contracts, and, on account of the solemnity attached to them, the law presumes that there is a consideration for them, and consequently no consideration is required to make them valid contracts; on the other hand, simple contracts, as previously stated, require a consideration to support their validity. There is an exception to the rule that the law presumes that there is a consideration for every deed, and this exception is in the case of a person who enters into a contract with another person whereby he agrees not to carry on his business which he has sold to that other party: here, even though the agreement be made under seal, a consideration is required to support the agreement.

A statement in a simple contract is presumptive evidence of its truth against the maker of it; in a deed, such a statement is absolutely conclusive, unless the contract was brought about through fraud, or the maker of the statement was coerced into making the contract through threats of physical force used on him by the other party to the contract.

Another difference between a simple contract and a deed is that a right of action arising out of a deed is barred by non-exercise for 20 years; a right of action on a simple contract is barred in six years.

It should be stated, however, that in the case of mortgages (which are contracts under seal), made on or after July 1, 1894, the right of action is barred in ten years.

A contract by deed merges in itself an agreement to the same effect contained in a simple contract. This is what is known as merger.

The following are some of the contracts which must be in the form of a deed:

1. A conveyance of land.
2. A transfer of a ship.
3. Certain contracts made by corporations.
4. Gratuitous promises, such as a bond.
5. Leases of property for three years or upwards.

The second essential of a valid contract to be considered is that relating to the competency of a person to bind himself by contract.

A person under the age of 21 years (known in law as an infant), as a rule, cannot enter into a valid contract.

He may, however, render himself liable for necessaries of life purchased by him, in the absence of any person legally liable to support him, and also for such things as are suitable to his station in life, and to his particular circumstances at the time.

The general rule in other cases is that an infant's contract is voidable at his option, either before or after he has attained his majority.

Being so voidable, the infant may ratify his contract when he attains his majority, and assume the rights and liabilities arising from it.

But there are certain classes of contracts which are deemed to be adopted by the infant when he attains his majority, unless he expressly repudiates them, and that within a reasonable time of reaching his majority; what amounts to a reasonable time being in each case to be determined on the particular factor. This latter group of contracts consists of those which are incident to interests in permanent property, and includes contracts of tenancy, partnership, contracts to take shares in a company, and marriage settlements.

In these cases if the infant repudiates the contract on coming of age, he must also return any benefits he derived under the contract. The law will not allow him by his repudiation of the contract to

...ade a profit out of the other party to the contract.

In determining whether an infant can recover money paid by him under a void contract, the test is to see if the infant derived any real advantage from the contract; if he has, the money cannot be recovered.

There are a few contracts (not a great many) made by infants which are absolutely void, such as a bond or a contract made by an infant with a penalty attached to it, and a contract which is clearly to his prejudice.

A married woman is capable of contracting as if she were an unmarried woman, but only to the extent of her separate property, and so as to bind her separate property only.

It must be noticed that there is no remedy enforceable against the married woman personally; the debt is payable out of her separate property only.

A contract made with a person who is insane and does not know what he is doing, if no advantage has been taken of the lunatic's state, and if the other contracting party was not, at the time the contract was made, aware of the lunacy, will hold good; in other cases, the lunatic's contract is voidable by the lunatic. It may, in any case, be ratified by the lunatic, when he recovers his senses.

A person who enters into a contract when in a state of complete drunkenness, so that he does not know what he is doing, may avoid such contract; but it remains good, unless he does so within a reasonable time. If the contract is for the supply of necessaries at a fair price, in the absence of unfair dealing, it is good.

The third essential of a valid contract to be considered is that there must be a mutual assent of the parties to the contract. This means that there must be a proposal by one party and acceptance of the proposal by the other party.

The rules which govern proposal and acceptance are:

1. The proposal must be intended to affect, and be capable of affecting the legal relations between the parties, that is, it must be made in contemplation of legal consequences; for example, a promise to take another to the theatre or a promise to take dinner with him at his house, is not such a promise as could be enforced at law.

2. The acceptance of the proposal must be absolute, and identical with the terms of the proposal.

If the terms of the proposal are changed in any way by the acceptance, there is no legal acceptance of the proposal, and consequently there is no contract between the parties.

To make a binding contract, in case there be an acceptance of the proposal with some change in its terms, the proposer must consent to the changes in the terms of the proposal made by the other party.

3. A proposal which has not been accepted does not affect the rights of the parties and results in nothing.

A mere mental acceptance, uncommunicated to the proposer, avails nothing.

A proposal, if the mode of acceptance is specified, is not properly accepted, unless it be accepted in the manner required by the proposer; for example, if the proposer write to the other party that he must reply by wire within 24 hours, the proposer cannot be bound by any acceptance which is not in accordance with the prescribed mode of acceptance.

The proposal, if nothing is said respecting the time of acceptance, must be accepted within a reasonable time.

4. A proposal and acceptance need not necessarily be written or spoken, but may be acted, wholly or in part; as, if a customer takes up goods off a tradesman's counter, and takes them away, that is, without any felonous intention, and nothing is said by either party, the law presumes an agreement for a sale of the goods at a reasonable price; or, if a man hails a cab and orders the driver to take him to a certain destination, a valid contract is entered into, and the driver can compel his fare to pay a reasonable price for the drive.

5. A proposal need not be made to any specified person, but there can be no contract until it has been accepted by some specified person; for example, the proposal by way of advertisement of a reward for the rendering of certain services, inserted in a newspaper, becomes a contract to pay the reward, as soon as some person renders the services, but not before.

6. A proposal may be revoked before it is accepted, but not afterwards; and an acceptance cannot be revoked.

The acceptance must either be communicated to the proposer, or some act must have been done which the proposer has expressly or by implication offered to treat as an acceptance; for instance, in contracts made by correspondence, there must be the posting of a letter accepting the proposal; or, the acceptance may be inferred from subsequent conduct of the person to whom the proposal was made.

With respect to the rule that a proposal made be revoked before acceptance, it should be stated that where parties living at different places are compelled to treat by correspondence through the post or telegraph office, there is a modification of the rule to this extent, that the proposer cannot retract his offer after the acceptance by the other party has been duly posted or telegraphed, although the acceptance may not yet have reached the proposer; nor can the party who accepts retract his acceptance after duly posting or telegraphing his acceptance, even though the retraction is sent prior to the proposer's receipt of the acceptance.

Even when, on making an offer, the proposer expressly promises to allow a certain time to the other party for acceptance, the offer may, nevertheless, be retracted during the given time, provided that no consideration has been given to the proposer for the promise of the specified period for making the acceptance. If consideration has been give for the time, the proposal cannot be retracted until the time has expired.

The fourth and last essential of a valid contract to be considered is that the objects of the contract must be legal.

Illegal contracts are those which are entered into in defiance of some statute or some express rules of the common law, or are contrary to public policy.

Where a penalty is inflicted by some statute upon the carrying on of a trade or business in a particular manner, contracts made contrary to such statutary enactments are illegal and consequently void.

Wagering contracts are prohibited by statute.

It is obvious that a wager may be a purely gambling transaction, or it may refer to commercial matters.

Most business ventures and dealings are somewhat speculative, and offer savor of gambling transaction, but, as a rule, they are legal. Often, however, the question as to whether they are legal or illegal, is very difficult to answer; and in recent times there have been many laws placed on the Statute Book to prevent certain forms of business transactions, which are closely allied to gambling or really amount to pure gambling, that is, gambling in stocks and commodities.

The difficulty our lawgivers have to contend with is that laws directed against these gambling transactions often militate against legitimate business dealings, and consequently it is very difficult to suppress the evils of gambling in stocks without obstructing trade, which is more or less a gamble, as many a merchant knows to his cost.

To mercantile men the importance of the laws prohibiting wagering contracts lies in the effect it may have on stock-exchange transactions. The law is, that when shares are purchased, there is a bona-fide intention to take them and to pay the price, then the contract is good; but, if the intention of both parties is that the purchase shall be a mere cover, under which the party speculates in the rise and fall of prices, then the contract is of a wagering nature, and is bad.

It is easy to lay down this law, but the difficulty is to apply it to any particular case, owing to the many ingenious schemes of stock brokers and dealers to

turn a gambling transaction into an innocent-looking trade deal.

One form of a wagering contract which has been legal for a long time is the wagering contract known as the contract of insurance.

This kind of contract is practically a gambling transaction on the part of the parties to it, but owing to the great benefits accruing from insurance, the law has, for a great length of time, recognized insurance contracts as legal.

The advantages of fire, life and marine insurance are well known, and in recent years employers of workmen have been extensively insured against losses incurred by the employers through injuries to their workmen.

Another kind of insurance brought to our notice at the present time is the insurance placed by English merchants to cover any loss to their business they might have incurred through the death of the King before his Coronation.

There are some kinds of insurance which are not legal, as the perusal of the following case will show.

The facts of the case are as follows: A minister of advanced age entered into an agreement with an insurance agent, a much younger man, but very alive to business, that the agent should insure his, the agent's life, in a certain company, and assign the policy to the minister, and that the minister should pay the premiums. I might say that the minister, at the instigation of the agent, adopted the novel method of providing for the payment of the premiums by purchasing from the same company, an annuity equal to the amount of the yearly premium. This method of payment of the premiums does not, however, affect the question of the validity of the policy. It was understood between the agent and the minister that the agent should receive the benefit of the commissions on both the annuity and the insurance, but was not to be otherwise interested in the policy. The agreement between the parties was carried out, and the premiums were paid by the minister's annuity for a few years, when the agent died. It was held by the courts that the insurance was void, as being in violation of the statute and that the company, which was entirely innocent of the agreement between the agent and the minister, was not liable on the policy.

This statute governing insurance provides that no insurance shall be made by any companies on the life of any person or any other event wherein the person insured shall have no interest.

With regard to contracts made in defiance of express rules by the common law, it is hardly necessary to state that an agreement to commit a crime is illegal and would not be enforced by the courts. An agreement to commit a civil wrong is also illegal; and so are agreements of an immoral nature.

Contracts which are contrary to public policy, that is, which the courts deem it impolitic to recognize, such as agreements tending to injure the public service, are illegal. The public is deeply interested in the proper performance by public officials of their duties, and the law looks upon contracts as illegal which have for their object the sale of public offices or the assignment of the salaries of such officers.

Agreements which have a tendency to obstruct the course of justice are illegal. These agreements most frequently appear in the form of agreements to stifle prosecutions for a criminal offence.

Contracts which tend to encourage litigation are also illegal; and so are agreements which affect the freedom or security of marriage.

Agreements in restraint of trade are illegal as it is against the policy of the law that trade should be fettered in any way.

This seems to be commonsense as well as law, but by allowing trade to have too much freedom, perhaps the time will come when trade, if given too much freedom, will itself fetter the law.

In these days of huge business trusts and combines it has become a much debated question whether some limit should not be placed on the power of the multi-millionaire to grind down his employe or to engineer trusts and combines so as to obtain the monopoly of business, thereby forcing to the wall the smaller merchant and having the power to fix prices at his own sweet will.

On the other hand, labor unions get beyond the control of the law, and become a law unto itself. Although labor unions have accomplished much good for the workmen, yet, like the capitalists, they also often adopt illegal measures to obtain their ends.

An example of a valid contract in partial restraint of trade is where a man, on selling his business, binds himself not to carry on his business, but, in order that this agreement may be legal, it must comply with the following rules:

1. The restraint against the carrying on of the business may be restricted as to time and space.

2. It must be such that, in view of all the facts of the particular case, it is reasonable and necessary for the protection of the party intended to be protected.

3. It must not be harmful to the general public.

4. It must not extend to every business or trade

STOVE AND TINWARE TOPICS

MISTAKES OF RETAIL STOVE DEALERS.*

By H. A. Cole, Chicago.

THE GREAT mistake of the average retailer the world over, and which comprehends all others, is in failing to get under the vital details of his business.

There are three kinds of stove merchants: The aggressive, successful dealer, his short-sighted imitator, and No. 3, whom we will call the blind man in the stove business. The majority of retail stove dealers belong to the second and third classes. They do not know what their goods cost in their customers' houses; do not know what proportion of this cost should be represented by advertising; by general cost of doing business, or by the special expense attached to the stove business as such. They do not look ahead and plan their stove campaign for years in advance of the present time in selecting the lines they will push or in the manner of marketing their goods; in fact, the general conduct of the business of dealers Nos. 2 and 3 is a sort of "grab-bag" affair that depends on circumstances and chance as to the volume of their business, and as to whether they will make their selling campaign on the basis of quality, trade mark, or price. In contrary distinction to these, our aggressive, long-headed dealer figures out every item in the cost of his goods, including his collecting expense, his general cost of doing business on top of his special stove expenses, and knows whether he is making a profit or not when he sells a stove. He makes his fight on quality, and quality only; and in settling this matter is not content to take a medium grade article, and have its quality represented by the amount of brag he can put on it; but he selects the best goods he can buy of the class.

His stock is always in the line of specialties, he familiarizes himself thoroughly with every detail of the article he sells, from the manufacturer's standpoint and the housekeeper's standpoint as well. He has made a study as to the best and most effective way of advertising his business for the least possible outlay. He figures his fixed expense account strictly on the basis of the volume of business he is doing from year to year, and when business is poor this expense account is down to a minimum. In selecting the stove specialties he will push, he figures on each year's results as to its bearing on his business for several years to come.

He is not the mouthpiece of any manufacturing concern except in so far as that concern's goods are backed up by merit of the most sterling quality, and his whole stove and range business will be represented by large sales of a few first class specialty goods, together with very light sales of a general assortment which he keeps and uses to help his specialties. In placing orders, for, say, 350 stoves and ranges, he will limit himself to about 14 patterns of stock sizes. Point me to a dealer who has carried out the above programme and I will show you a lot of other dealers, in that and adjoining towns, who would break their necks, figuratively speaking, to get the exclusive agency for the goods our successful dealer is pushing.

Dealer No. 2, our short-sighted imitator, in every business move he makes, has constantly looming before his gaze the one nightmare of his life namely, the amount of business our successful dealer is doing, the kind of stoves he is selling, and the prices he is selling them for. He buys a full stock of at least 60 different patterns in ordering about 350 stoves.

Dealer No. 3 samples the bargains of every travelling man that comes along. If he buys 100 stoves he has nearly as many varieties and few duplicates of any kind in stock. He never knows whether he is competing with dealer No. 1 or No. 2, or whether his customer is figuring on a catalogue house bargain in a Cheap John article, hence he has no established code of prices, or stock of goods, and goes on the basis of getting all he can.

Another important characteristic of the successful stovemen is that he must be quick to read the "handwriting on the wall," and get his stove business in line for the sweeping changes that periodically come over it every 15 or 20 years. That handwriting for stove dealers to-day is, that your trade will, in the next few years, make a sweeping change from wood to coal, and if you are wise you will lay the foundation to-day for the coal trade you will have for the next 15 years to come. Now, let me offer a

A FEW DON'TS ON THE STOVE BUSINESS.

Don't order your goods to come forward from any manufacturer on September 1, as you ought to have your samples on your floor the latter part of July and have every clerk in your store working up future stove sales from this time on; and, besides, if you do, you run the chances of not getting your stoves until October 1, as every manufacturer has orders enough on hand for September 1 shipment to keep his force running until September 15 every year.

Don't wait until customers remind you that winter is coming before you begin to get your stove samples on your floor. If you do your competitor gets the stove business of your community while you are sleeping on your rights.

Don't neglect the appearance of your sample floor and sample stoves, and in setting the height of your stove platforms, 10 to 11 in. is better than 4 or 5.

Don't leave a thorough canvass of your accounts till the monthly statements are made out, but keep in close touch with your ledger account and the way your customers are paying their bills by very frequent reference to your ledger.

Don't leave the correctness of your bookkeeping department as a matter to be called to your attention by your customers, but know from day to day, by personal inspection, that this department of your business is above reproach.

Don't neglect your newspaper advertising or turn it over to the newspaperman, and don't put off the writing of your ads until he is waiting for the copy. Sit down in July and figure out definitely your advertising campaign in all of its details, get the electrotypes you will need, settle definitely what you will pay out for the coming stove season, and how you will distribute it, and then write your advertisements for the whole fall [illegible]. In no other way can you [illegible] advertising expense down [illegible] have advertisement[illegible] this [illegible] will send you interested [illegible]

Don't forget that when a customer enters your front door you have accom-

* Extracts from an address delivered before the Indiana Retail Hardware Association.

[illegible] everything that any amount of advertising, no matter how expensively produced, can do for you with this man. [illegible] where your salesmanship can [illegible] its work, and I maintain that every [illegible] minute of your own and your cus[illegible]s that is devoted strictly to call[illegible] his attention to his possible future wants in the line of your business is ten times more effective in making future business and a good customer for your store than if spent in general gossip.

Don't ever pigeon-stool the line your competitor is carrying. Your customers will brand it as a mean, underhand trick, and with the majority of them you are merely advertising your competitor's business. Never run down a competitor's line of goods, for the same reason. The buying public like to see fair play and will patronize the man that gives it.

Don't neglect to discount your stove bills, and if you have been unable to get these discounts from your current receipts you cannot make a profit easier than to borrow the money at the bank to get them. The incentive that this feature will furnish you to look sharp after your collections will save you half your dead-beat accounts.

Don't neglect to cultivate a friendly relation between yourself and your competitors. It is great big dollars in both your pocket and that of your competitor if you are harmoniously doing business in the same community rather than trying to cut each other's throats in a business way.

AN ALUMINUM SOLDER.

Notwithstanding the assertion by several manufacturers of aluminum that a satisfactory solder for that metal had not been discovered, George Callahan & Co., 218 Front street, New York, write that they sell an aluminum solder which makes a perfect joint. They claim that their solder has been severely tested for many months, and that it has unfailingly stood the test. It requires no flux or liquid of any kind, and is applied with a common soldering iron. It is only necessary that the solder be rubbed in a fused state with the soldering iron on the surfaces to be joined, the surfaces being then placed together and the soldering iron passed over them, making a complete joint. It is not possible to "sweat in" solder for aluminum between the surfaces, so that this method of "tinning" with the solder is absolutely necessary in all cases.

This solder can be used for repairing all kinds of aluminum cooking and household utensils as well as ornamental and fancy articles.

EXTENDING GRANITEWARE AND TINWARE TRADE.

THERE is a great difference in the interest taken in graniteware and tinware by hardware retailers and consequently a material difference in the volume of business secured by them. With some these lines are of comparative insignificance; with others, they contribute materially to the aggregate profit of the year's business. Yet, there is no reason why all hardwaremen should not find these lines among the most satisfactory in the store.

BUYING GRANITEWARE.

Inasmuch as prices are strictly uniform there is little advantage in trying to get "on the inside" in the matter of price. In buying the main consideration is to keep stocks well assorted. In some quarters there is a tendency to buy from hand-to-mouth, but the most successful retailers have found that it pays to save freight, time spent in ordering and unpacking, and to prevent possible loss by running out of lines by ordering in large quantities and thus keeping stocks well assorted. Graniteware and tinware never become old stock, as fashions do not change and the same goods are sold the year around, though, of course, there are some lines that are only sold in certain seasons. These are well worth pushing in season, and should be bought and placed in stock well before the trade in them is opened up.

METHODS OF DISPLAY.

The means taken to sell graniteware, tinware and stamped ware make all the differences between an ordinary and a successful trade in the line. A traveller who has sold these lines in many parts of the Dominion and who has taken note of the habits of his customers, told the writer the other day that two of the most successful dealers in these lines had adopted practically the same methods in pushing this line. They give them their due share of advertising, but in his opinion their success has come as a result of their excellent system of displaying these goods. In a prominent place in each store is quite a long table of fairly good width. A shelf is built about 30 in. up from the centre of the table. On the shelf, small pans, pots, cans, etc., are shown; on the boards from the table to the shelf are hung dippers, tins, small pails, cans, etc. On the table are shown kettles, pails, pans and other larger sizes of graniteware and tinware. The arrangement is changed frequently and is generally so attractive that ladies, while waiting to be served, while a parcel is being tied up or change is being made, often examine the goods minutely. The goods are all labelled with selling price, which is strictly adhered to, and so is never questioned. The result has been that the two firms in question have built up an extremely satisfactory trade in graniteware.

MAKING UP TINWARE.

"Can you make up in your tinshop goods to compete with those made in the large factories?" asked the writer of a Toronto retailer this week. "In some lines, yes; in some, no," was the reply. "For instance, the stamped sap tins, milk pans, etc., are so beautifully and cheaply made, that we cannot match them, either for style or quality. On the other hand, look at those pails. See what strong tin they are made of; examine the workmanship carefully. No machine-made goods I have yet seen will compare with those for durability and appearance. Consequently we can get so much more for these goods than is asked for the machine-made that we can afford to make them up. See those dippers. In fact, in everything except the strictly stamped goods, we can afford to make up a limited quantity, for which we get fair prices and a reasonable profit. We have a particularly good sale of boilers, which we make up ourselves. We put in them the best tin and copper we can get; make them as thorough as we can. So we will probably continue to sell these goods despite any advance in manufacturing science, great as it is."

"What class of people want the hand-made goods?"

"People in all classes. Generally, though, the type of people who want everything of the best possible make, regardless of price. This class is naturally limited, but we find in a city like Toronto it pays to cater to this class."

The above conversation was interesting, and suggested to me that by making up a limited quantity of hand-made goods during the slack season, many dealers might put to good advantage some of the time of men in their tinshop. It would be worth figuring out.

KEEPS HIS EYES OPEN.

"Do you know how I get half my eavetrough repair work?" asked a hardware dealer in a small town who has an up-to-date tinshop in connection. "When I am about town I keep on the alert for repairs. There is not one man in a hundred who notices when his eavetrough is out of repair. But when the average man gets a circular from me that it would be well to examine his eavetrough at this season of the year, he generally does so, and when I get at him within a week I can usually persuade him that he needs our services. I do him good, you see. But we share in the good results, you can depend."

THE GURNEY FOUNDRY COMPANY'S NEW PLANT AT TORONTO JUNCTION.

NEW "OXFORD" RADIATOR WORKS.

SOME months ago, after looking over the situation thoroughly and recognizing the rapid development of the heating industry of Canada, The Gurney Foundry Co., Limited, Toronto, decided that in order to meet the present and prospective expansion of their business, their premises on King street west, Toronto, would have to be enlarged or new ones constructed.

Owing to the fact that the Toronto works are not situated immediately adjacent to either railways, it was determined to erect works on a much enlarged scale and in a more convenient location. Once the decision to erect new works was reached, it was in keeping with the enterprise of this firm to make them of such proportions that they will be able to meet adequately any demand that may be made upon them by the requirements of the trade and country, notwithstanding the unprecedented development of business throughout the Dominion.

The accompanying engraving, taken from the engineer's plans, gives an excellent idea of the extent of the new works, which have a total length of over 1,000 ft. with a width varying from 75 to 100 ft. They are situated close to both the C.P.R. and G.T.R. tracks at Toronto Junction, and a quarter of a mile of sidings are built on the firm's own land.

The arrangement of the plant is of such a nature that the goods progress always in one direction, from the raw material to the completed article, which is then lifted five feet to the floor level of the warehouse. From this warehouse entrance to the level of the cars is a gradual decline of 1 ft. in 300 ft., sufficient to cause the force of gravity to draw a truck loaded with radiators and a man on it, instead of the man walking behind and pushing the truck. In every department of the works the plans have provided for the greatest economy of production and facility of handling.

The buildings throughout are of solid construction, brick being the principal material, though an abundance of light is insured in each shop. The moulding shop, which has a very high cupola, is almost a glass building, the brickwork being merely piers of solid construction between the windows. The ventilation, an important feature of the moulding shop, is amply provided for, the roof being particularly lofty. The machine shop is very roomy, being between 300 and 400 ft. long, and is bountifully lighted. The warehouse is of such proportions that a capacity is provided for loading five cars simultaneously. The boiler house is separated from the rest of the plant, and contains two multitubular boilers, each 150 h.-p.

The machinery is of the latest type throughout. The moulding shop is pro-

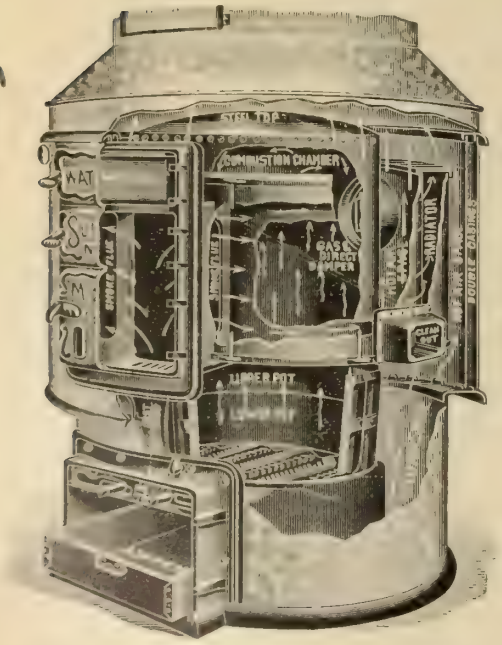
"Cornwall" Steel Range

The reputation acquired by the "Cornwall" Steel Range during the past two years is a sufficient guaranty of its superiority over all others, and renders it unnecessary to enumerate all of its many special features.

Dealers who are building up a business on the "quality of goods and value for the money" basis should investigate the merits of this range and place a sample in stock.

A salesman can always give his unqualified guarantee (backed up by the makers), that, as a cooking apparatus, the "Cornwall" is the most **Economical, Durable, Efficient, Convenient, Cleanly and Easily Managed** range on the market.

Will be advertized extensively again this year.



SUNSHINE

"Sunshine" Furnace

One of the strong points in this furnace is its adaptability to burn wood equally as well as coal, and the value of this feature has been strikingly demonstrated by the scarcity of coal this winter.

This will prove a strong argument in its sales for some time to come, and doubtless dealers who handle the "Sunshine" will make the most of it.

Its many other meritorious and exclusive features are well known to the trade.

The "Sunshine" will be extensively advertised in the newspapers and magazines again this year.

Advertising matter supplied free to all customers.

There's nothing speculative about it—it's a sure thing.

The Gurney Foundry Co.

LIMITED

TORONTO——WINNIPEG——VANCOUVER

The Gurney-Massey Co., Limited, Montreal.

vided with travelling pneumatic cranes of the most modern design for handling large castings, etc. The cleaning room has a large battery of exhaust mills. Within the cupola room is a small engine room, in which is placed a 40 h.-p. high speed engine and a Connersville positive blower. The cupola furnace has a guaranteed capacity of 14 tons of moulten iron per hour. Ovens of the most approved type, with fires outside, are installed in the core shop. These, in addition to greater economy, give a capacity four times that of the ovens in the old plant. They are, moreover, so constructed that it is impossible to burn any core. A complete system of arc and incandescent electric light is furnished by a 60 h.-p. dynamo, driven by an "Ideal" high speed engine.

The main power for the plant is supplied from a large "Corliss" pneumatic engine. Compressed air, supplied by a "Rand" compressor, is used for operating the pneumatic chippers and drills in use throughout the works; also the cranes and lifts in the machine shops.

Ample provision is made for the storage of coke, coal, sand and iron, sheds being provided for all but the iron. A small industrial railway plant connects the various buildings, so that raw materials, castings, parts, etc., are most economically handled, and the heating throughout is entirely by means of the exhaust steam from the engine.

The new works which it is hoped will be in operation by April 1, will be devoted entirely to the manufacture of "Oxford" radiators, hot-water and steam boilers, etc. The large works of the company on King street west, Toronto, will be continued for the production of "Oxford" stoves, furnaces, and parts therefor.

McCLARY'S NEW STOVE.

A Canadian firm of rangemakers having designed a new cooker, opened a public competition for the best name to give the article, and, according to an exchange received no fewer than 20,150 suggestions from 7,834 ladies. The winning title was "Pandora," and as three ladies suggested that name each has received a complete range as a prize. "Pandora" does not, however, strike one as a particularly happy designation, and something more appropriate than the name of a mythological female of shady reputation might surely have been hit on by one or more of the competitors. Perhaps it was the association of ideas of the mysterious box of Pandora and the mysteries of such dainties as, say, "resurrection pie," that prompted the decision.—"Vulcan" in Ironmonger.

("Pandora," according to Webster's, was fabled to have been made by Vulcan (the god of fire), and upon whom all the gods and goddesses bestowed gifts to make her more complete. "Pandora's" box was fabled to contain innumerable evils, and had been presented to "Pandora" by Jupiter. From it, when opened, countless ills and diseases issued forth to afflict mankind, hope alone remaining for the consolation of the race).—Editor "Hardware and Metal."

COPP, SON & CO.'S NEW FOUNDRY.

The accompanying cut is an illustration of the new foundry of W. J. Copp, Son & Co., Fort William, Ont., whose "Empire" brand of stoves and ranges

promises to be soon as well-known in Canada as were those manufactured by the old firm when located in Hamilton, Ont.

HOW ENAMEL LETTERS ARE MADE.

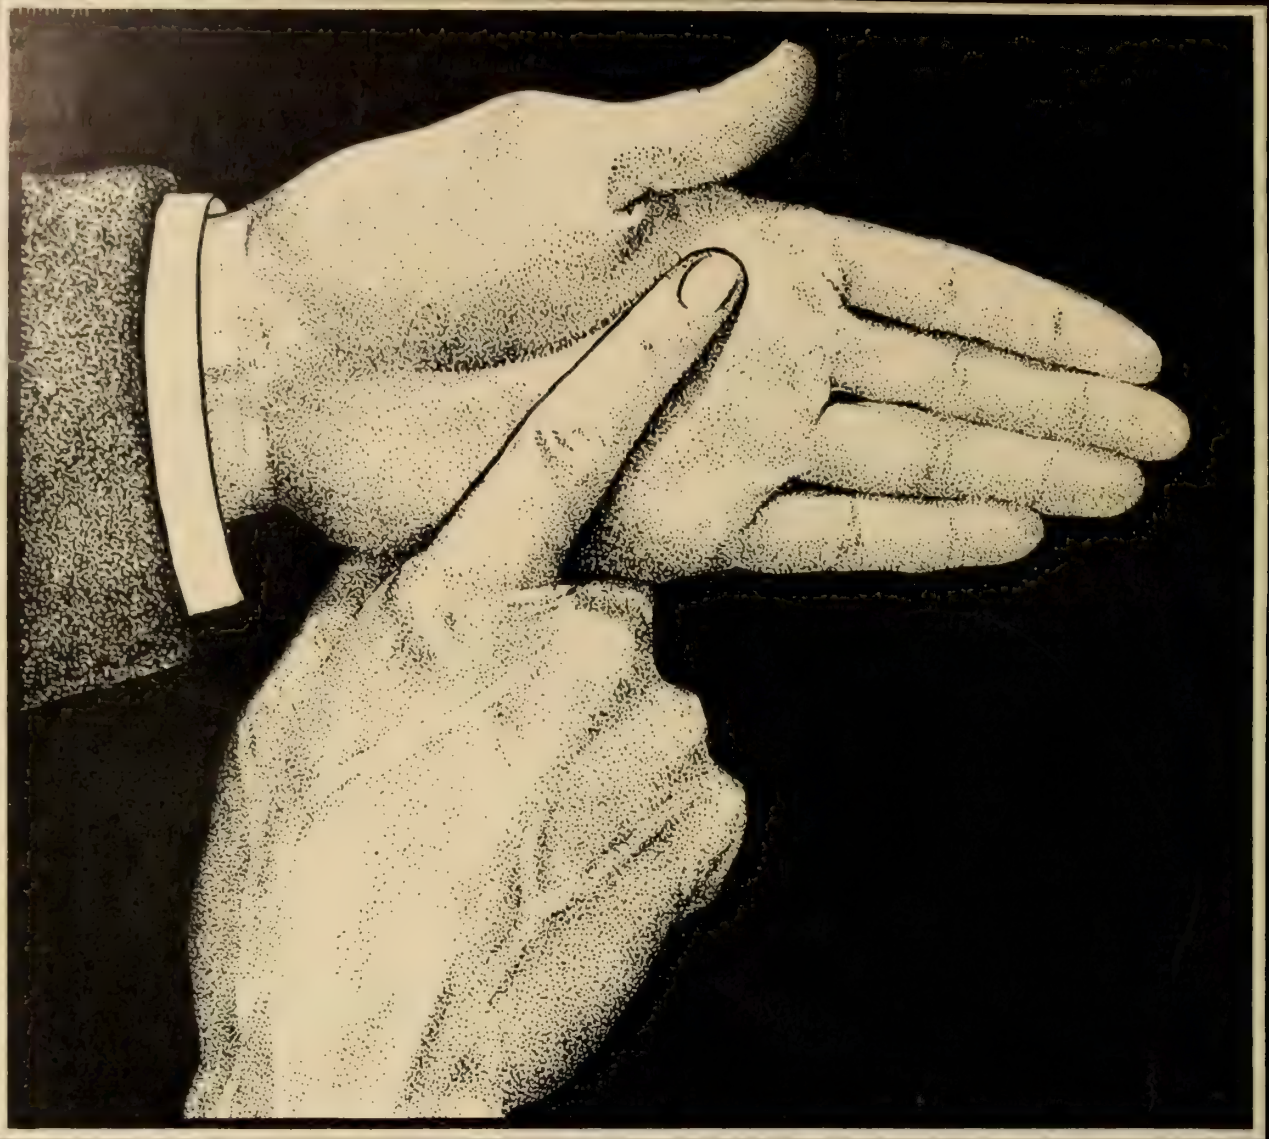
THE method of making an enamelled letter has four stages—stamping, enamelling, firing and filing, says The Decorators' Gazette. The stamping is accomplished by means of presses, and is a very rapid and complete operation, the workman taking a piece of thin sheet copper, placing it on the press; when the lever descends there is a sharp cutting sound, and the letter is made perfect in every way. The letters are now taken and laid on a tray of wire, the hollow side being placed uppermost, and painted over with a thin mordant. While in this position, and before the mordant dries, they are taken on the tray to a large box, which is full of the powdered enamel, and, holding the tray in one hand, the workman takes a fine sieve full of the powder and dusts it over the letters, all the surplus powder falling through the open wire work and into the bin again, so that there is no waste. The letters are then taken and laid carefully on thin iron disks or plates on the bench, where they remain till they are fired. The disk containing the enamelled letters is taken at the end of a long iron handle and carefully placed in a dome-shaped muffle. These muffles are all heated from the outside—that is, the fire is all around the chamber, but not in it, the fumes of sulphur being destructive to the enamel if they are allowed to come in contact with it. So intense is the heat, however, that a muffle lasts only about nine days and at the end of that time has to be renewed. After the enamel is fused on the copper the disk is taken out and placed on a side slab, where it is left to cool. This process is repeated on the front side of the letter, when all that remains to complete it is the filing. This is done with very fine files, and the letters are turned out smooth and well finished in every respect.

DOUBLING UP SALES.

The up-to-date hardware dealer who handles stoves and ranges is ever on the alert for the erection of new buildings going up in his district. In fact this means the sale of many uses, including a stove or furnace. Of late the tendency has been to add to the number of lines that the hardwareman can profitably sell to the builder or householder. In recognition of this tendency The Batty Stove and Hardware Co., 76 York street, Toronto, have taken agencies for some of the foremost manufacturers of mantels, grates, tiles, gas logs, etc., and are making a vigorous push for trade this season. These lines can be handled to excellent advantage by retail hardwaremen. Many live retailers now stock this class of goods, while others, who have not yet built up sufficient trade in these goods to warrant them in keeping a stock, act as agents, and armed with the most up-to-date catalogues, interview any persons who may be building in their town, and endeavor to sell them a handsome mantel and grate. There is a good profit in this for the hardwareman who is willing to take it up. One firm which supplies the Batty Company make a specialty of this class of goods, and when they have not got something in stock to fill the requirements of a prospective customer, will make any style of mantel to order. The Batty Stove and Hardware Co. will be pleased to communicate with any hardware dealer who might be interested in their lines.

GIVING AWAY GAS STOVES.

Several municipalities in Great Britain are taking progressive measures to extend the sale of gas, in order to increase the profits of the municipal gas plant. With this object the Yeovil Town Council is making a new departure, according to a British Exchange. They have gone to the expense of advertising that they will fix up free of cost a limited number of houses in the town with gas cooking stoves. To cover interest on the capital outlay a slight weekly charge will be made for gas.



Our Strong Reason why every person should sell the

WHITE MOUNTAIN FREEZER

IS THAT THE PEOPLE WANT IT.

They have seen it advertised, have talked about it, and have used it for years. Time has told them that it endures, and experience that it satisfies. Its popularity makes it go.

The dealer who sells the **WHITE MOUNTAIN** doesn't have to argue to convince his customer that it is the freezer to buy.

SUGGESTIONS FOR THE INCREASE OF STOVE TRADE

By Ed. J. Brewer, Toronto

A few weeks ago it was the good fortune of the writer to be present at a social affair tendered by one of our leading stove manufacturers, and among other good things, an address by the chairman of the evening, developed a thought which seems to give a special inspiration and force to this article. In the course of his remarks this gentleman expressed the opinion that the business of stove manufacture stood in an unique position in the mercantile community, inasmuch as it required, to a larger extent than any other business, the use of the "whole man" to carry it to a successful issue.

Ed. J. Brewer.

When we realize how largely the prosperity of the iron trade affects the well-being of the whole nation, we can appreciate to some extent the pith of this remark. The very nature of the business indicates "energy," its pulsations are indicative of the life of trade in all its varied channels. If, then, we are engaged in so important a branch of this great fundamental industry, it devolves upon us that we should put forth our best efforts in this direction.

The successful stove salesman might be said to be a man of almost extraordinary ability; he must be energetic, must have a fair mechanical ability coupled with a clear idea of natural laws relative to atmospheric conditions with which his wares are in constant combat; but above all he must understand thoroughly the goods which he is selling, as well as the people he is selling to. How often has a sale been lost by this lack of knowledge, or through the use of an injudicious remark, when a quick answer to a simple question, or a diplomatic retort would have turned the tide. The successful merchant never gets above the people he is selling to; this does not necessarily mean the sacrifice of dignity, but rather a liberal disposition which meets the customer on his own plane, makes him feel comfortable, and brings his trade.

It is well to remember that in selling a stove you are marketing an article which is going to either make or lose trade for you for years to come, and it is therefore desirable that in the selection of a line the merchant should select such a one as will stand by him, and recommend not only itself but the merchant from whom it was purchased. Always push to the front an article which inspires confidence. The better class stove you market, the higher and more profitable will be the character of your entire trade. There is, of course, always a demand for cheap goods and it is, of course, necessary that this trade should be supplied, but it is most unwise to cultivate it.

A good deal of the apathy which is particularly noticed amongst many of our stove dealers seems to have its origin in the depleted margins of profit consequent upon increased competition, but I think this is largely due to the failure on the part of the merchants to get together for their mutual good. A good deal of the energy exhibited in the venom of our natures, if applied to the question of placing the business on a better basis, would bring much more satisfactory results. Many of our merchants to-day get so engrossed in the fact that Mrs. Jones can buy a stove $3 cheaper from Mr. Brown, that they forget they have a stove to sell, and that their object is to get that sale at a $3 increase on Mr. Brown's price. The application of a man's personality to an argument, the use of his whole energy, gives a magnetic touch which makes this $3 dwindle into insignificance when the stove is properly exhibited. Keep a stiff upper lip when you talk price, but loosen up when you talk quality. It's the dollars that you make above the other fellow that gives you standing with the manufacturer and your trade.

This does not, then, mean loss of business; it means the building up of a successful future; it means that if your goods are right the public have confidence in you. This confidence must be fostered throughout, you must take a personal interest in the goods you sell, never allow a complaint to pass unheeded; if there is a wrong make it right, and convert the growler into a supporter. Every detail of the work should be done in the best manner, whether it be the setting up of pipes or the making of water connections; neatness and thoroughness bring sure rewards.

The care of the stocks on the showroom floor should be always a matter of first importance. It requires but little effort to keep the goods bright and effective. Avoid the unfortunate habit of using stoves as dumping grounds for tinware, agricultural implements, stove polish and all such goods, let them stand out distinct. Replenish your stock on the floor with fresh goods at every opportunity; keep your stove line intact at all times. Press for business in the summer months, use up your spare time in following up prospects The manufacturers of stoves have always been up against a hard proposition in their inability to get the dealers to anticipate and yet these same dealers are selling binder twine and agricultural implements in the winter season for use months later. The sooner the dealer gets the idea in his head that the purchase of stoves in the fall is not altogether an accident of nature, the better will his sales book appear at the close of the year. Get out amongst your people in the dull months of the year, learn their peculiarities, discover their wants, make all the sales possible and at the same time place yourself in such a position that when the fall season is on you can handle the tardy ones with greater ease.

It would be almost criminal to close such an article as this without a word on advertising. Energy, personality, perseverance, thorough canvassing, are undoubted mediums towards the end desired, but to climax your success, you must be a successful and attractive advertiser. Keep your goods and name in continual evidence in your best-read papers or you will find some fellow tell you "he didn't know you handled those goods," and one or two slaps of that nature robs you of a great deal of vim.

A few words of caution might not be misplaced at this point, dealing with the general field, and which I have found invaluable

Never belittle an opponent or his goods. It dwarfs you and advertises him.

Never gloss over a defect with a lie; when the scale is removed the blemish will stand forth in all its hideousness.

Never lead a man to expect anything more than his bargain; each deal must stand alone.

Press for cash business and disparage the credit. Where credit is given do not leave the impression that you are so wealthy that you are in no hurry for the money. Your business needs it and your customer should know it.

The year just past was an extremely gratifying one in many ways, introducing to us an era of prosperity in Canada we have so fondly hoped for, and I sincerely trust that the expansion may continue until the resources of this vast North land have been exploited to the full. The possibilities are tremendous, and require united effort. Let the stove dealers of this country stand with the manufacturers and with the shoulder full on the wheel give the trade such an impetus in 1903 that the year may go down in history as one of unqualified success and prosperity to all.

TO ADVANCE FURNACE HEATING.

By Mac

A DISCUSSION has been started in the United States regarding the advisability of furnace manufacturers and dealers taking concerted action to advance furnace heating in that country. So far the expression of opinion has united in the verdict that the steps taken by the trade to put the business on a proper, intelligent basis have been altogether inadequate.

The conditions are practically the same in Canada as they are in the United States. The furnace manufacturers and the heating contractors are quite ready to answer any questions asked them. Some of the manufacturers have issued excellent booklets advocating the advantages and giving directions for the use of their particular furnace, yet there are, to-day, altogether too many furnace contractors doing business who do not understand the scientific principles of heating, and are thus never quite sure that the householder is going to get the best returns for the least cost from the furnace he is installing.

"It must be clear to anyone who studies this branch of work," writes A. J. R. in The Metal Worker, "that the architect, the builder, the carpenter and the owner need some more influential teacher than they are willing to accept in the smaller furnacemen, before they are willing to learn that a house should be constructed so as to be heated, and not constructed and then be heated as well as possible in face of the hindrances which their construction provides. No factor in the furnace heating field is so well qualified to bring this matter forcibly to the attention of the architect, the contractors under him, and his clients, as the furnace manufacturer; and it is due to the trade which patronizes the furnace manufacturer that he expend some of the profits which he derives from their trade in bringing about a change in the attitude of the architect, the builder and the owner on the question of furnace heating."

This writer takes the position that a considerable proportion of the architects, builders, carpenters and owners need some advice as to the essentials of furnace heating; that houses are often constructed in such a manner that a furnace cannot do itself justice inside it. This argument applies with equal force to Canada, where, too, heating is one of the most important considerations of the householder for at least five months of the year. Yet, no matter how poorly a house may have been designed, and how ignorantly constructed, the average owner or tenant never thinks of laying the blame on the house, but straightway gives the furnace a hard name. On the other hand, a properly constructed house gives good results with even an ordinary furnace, which, however, is probably given the credit for being an exceptionally good article.

It would seem a wise move on the part of furnace manufacturers to pay some attention to the construction of the buildings their furnaces are to heat, and to educate any builder who may be neglecting the requirements of furnace heating. The average dealer, however deficient he may be in technical knowledge or power, will be found ready to study any literature sent out, and to help in spreading any information given. But, where possible, the manufacturer's representatives may help materially by having a talk with the builder, or sending him any suggestions deemed necessary or advisable.

While, however, it is in the manufacturer's interest to study this question up and help the trade, the matter is one that the local dealer can frequently grapple with to best advantage.

FOUNDRIES COVERING TEN ACRES.

THE remarkable commercial development of Canada during the last two or three years has been frequently spoken of in these columns, and no more concrete example of the actual extent of this development can be given than that furnished by the McClary Manufacturing Co., of London. From the time of its formation by John and Oliver McClary over half a century ago, it has gone steadily forward, and its immense foundries, which cover more than half of two large blocks in the very heart of the city have long been the pride and boast of Londoners.

Notwithstanding the proportions of these buildings and the facilities therein contained for turning out at the shortest possible notice the immense quantities of their various lines of manufacture, the rapidly increasing business of the firm has demanded the erection of a series of mammoth structures in an entirely new location in the south-eastern section of the city. The property on which these new foundries are being erected, covers a total of something over 10 acres, and the buildings include a large power-house, a foundry 200 by 230 ft., and a mounting-shop, 85 by 200 ft., the last named being two storeys high. The floors of these buildings are made entirely of cement, and the walls of the mounting shop are, as well, constructed of that material. The building not only presents a very substantial appearance, but it is the first manufacturing structure in London to be made of cement.

The machinery which is being installed in these buildings is of the most modern and labor-saving type. All the machinery is to be operated by an electric current produced in the power-house by up-to-date types of compound engines and Westinghouse generators. Owing to the immense weight of pig iron and other metals used in a stove foundry, great regard has been had for handling these metals in as simple and easy a manner as possible. All materials are brought to the foundry and the finished products shipped on private switches connecting with the Canadian Pacific, the Grand Trunk, the Michigan Central, the Wabash, the Pierre Marquette and the London and Port Stanley railways, and the iron is unloaded from the railway cars to similar cars running on tracks level with the top of the cupolas. This absolutely does away with the necessity of hoisting, and means the saving of a great deal of labor. The castings, when made, are moved from the foundry to the mounting-shop in cars running on tracks.

These new buildings will be ready for operation by the middle of May, after which time the McClary company confidently expect to be able to keep pace for some time to come with the constantly increasing demand for their furnaces, ranges and stoves.

The older buildings, a portion of which were recently destroyed by fire, and which have since been replaced with more modern fire-proof structures, will in the future be devoted entirely to the manufacture of tinware, enamelware, and the other products, of which the McClary company are extensive manufacturers.

STOVE IMPORTS GROWING.

The season of 1901-1902 was one of the busiest, if not literally the busiest, that the stove and furnace manufacturers of Canada ever experienced. The result has not been only to build up in a rapid manner the business of Canadian foundries, but has resulted in a material increase in imports after three years of practically no change in import figures. The imports for the past six years have been as follows:

IMPORTS OF STOVES.

1897	$ 67,482
1898	88,770
1899	126,944
1900	129,864
1901	128,776
1902	172,791

The bulk of importations has been from the United States to Manitoba and Western points. It will be seen from the table below that the shipments from other countries have been small indeed.

COUNTRIES WHENCE IMPORTED.

	1901	1902
Great Britain	$ 365	$ 334
France	60	33
Germany	929	2,746
Norway and Sweden	394	....
United States	127,037	169,670
Total	$128,776	$172,791

Window and Interior Displays

Timely Hints and Suggestions.

DRESSING A HARDWARE STORE.

By S. W. Gano, Piqua, Ohio.

It is absolutely necessary in taking up the subject of dressing a hardware store to quote emphatically that time-tried old maxim, "Cleanliness is next to godliness." This should be applied not only to the store room, but to the storekeeper and his clerks as well. It costs nothing to be neat and clean, and is always appreciated by the customer.

No matter how systematic you may be, nor how tastefully you dress your windows, you discount the effect when you fail to enforce cleanliness.

Do not allow the boxes on your shelves to become so covered with dust that you must make a blow gun of your mouth ere you show the goods to a customer.

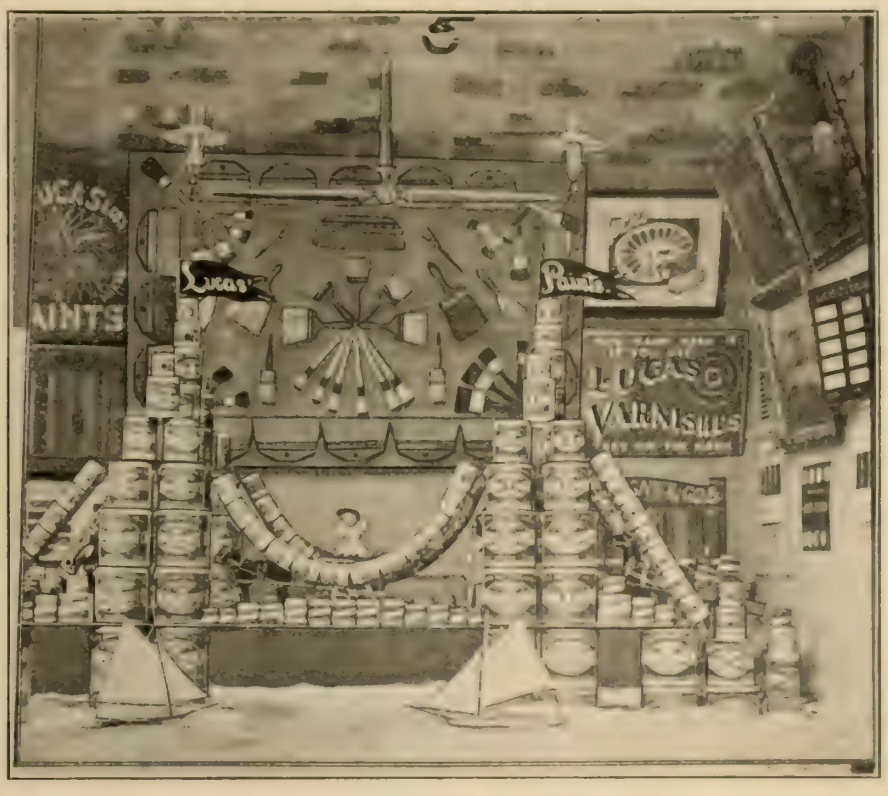
Adopt a systematic plan of cleaning. In a store in my home town of Piqua, each clerk has so many spaces or tiers which he is expected to keep clean and is held accountable for, and not less than once each week he is expected to thoroughly dust his allotted space and front his shelves; and if a certain section is in disorder or dirty the proprietor knows precisely who is to blame. All do not dust at the same time, but while one is cleaning his division another is ready to wait on any customer who may come in, and handles the trade, unless they come too quick, when, of course, the brush is dropped until the rush is over, when the cleaning and fronting is continued, and by following this plan there is no confusion.

SYSTEM.

There is a marked difference in the appearance of the various stores you enter. One has absolutely no system; the goods look as if they had been shot out of a cannon; butcher knives are in the front of the store, centre and rear; in another the same class of goods are kept in one tier, but not classified or placed according to size or grade; in a third, system is apparent, and the goods are classified in every sense of the word.

DOES IT PAY TO SAMPLE GOODS?

Yes, providing the sampling is intelligently handled. Some dealers advocate sampling on swinging doors, and there are arguments for and against this method. The system which seems to be gaining favor is sampling on the front of the box or drawer containing the goods sampled, and this brings us to the best method of facing the shelves to overcome the ragged appearance of the irregular-sized boxes in which the numerous articles are packed, and boxes of uniform size and color seem to have the pull. However, I went into a hardware store in Springfield, where an unusually tasty clerk was busy sampling their stock of padlocks. He had hinged the proper sized board to the bottom of each shelf, with a small French window catch at the top to hold same in position when closed. This board front, of course, being flush with the front of the shelves, a number of cup hooks properly spaced furnished the necessary support for the padlocks to hang on, the hooks being crooked sufficiently to prevent the samples dropping off when the front was lowered, and still open enough to allow the salesmen to lift off the sample and sell it, thereby avoiding a shop worn sample, which oftentimes occurs when they are fastened tight by wire or otherwise. At each end of this front were short pieces of safety chain, which held it as an extension of the shelf, and prevented its dropping down. The impression created was decidedly favorable.



A Prize-Winning Window.

Since writing this paper the following suggestion has been handed me: One point you could bring to the attention of dealers in regard to sampling their goods is to have all the points of all tools, knives, etc., point one way. Very few dealers think of this little point in arranging their samples. In most stores you will see the points aiming both front and back. When I was on the road I suggested to several customers that they start the points back from one side of the front door, carrying the points around to the back, and have the points pointing forward on the other side. It is just as easy to sample in that way, and it gives a more systematic effect.

There are several firms in existence today whose sole business is to furnish out fitting for a store of shelving, cabinets, boxes, drawers and counters, each system having merit peculiar to itself, and all are preferable to the back number [illegible] which frequently causes a [illegible] of hardware to look like an old curiosity shop.

SHOW WINDOWS.

The talisman by which the up-to-date, live merchant draws his transient trade.

Some stores we see, if they have a show window, use it as a catch-all for any old thing as long as it is hardware. They do not seem to think it of any moment that related articles be placed in the show window, but will drop a pair of skates alongside a scythe, a corn knife next to a pair of ice creepers, and not unfrequently a show window is allowed to remain not only weeks, but actually months, without making any change whatever. The consequence is that passers-by come to consider the window as an ancient landmark, and cease to be aware of its existence.

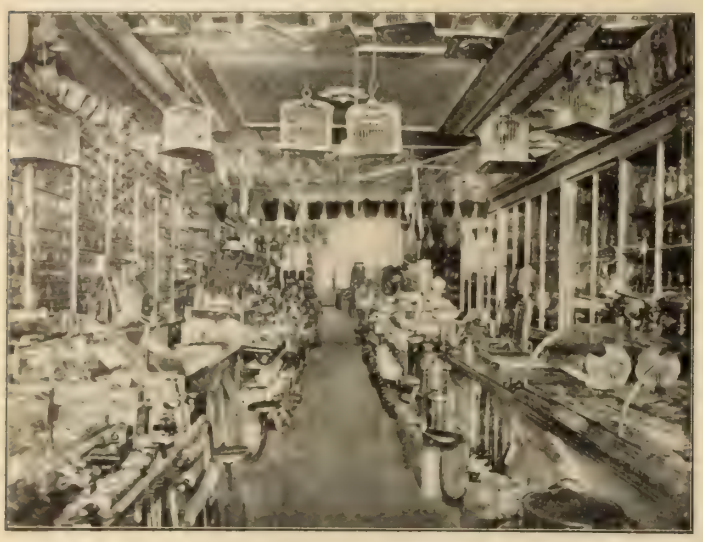


Fig. 1.—Interior View.

It happens to be my good fortune to call upon one of those live, wideawake merchants, who knows what a show window is for. On one Friday the clerks were dressing the corner window, it happened to be trap week, pyramids of traps. Two, three, four and five hole "Choker Mouse," "Out-O-Sights," "E. Z. Ketch," "Rex," "Catch 'Em Alive," and in fact, every kind of a trap this dealer carried was stacked in the window. The question, "Don't you put anything but traps in the window?" brought the reply: "No, indeed; we want them to think of traps. We have tried it before, and one after another will come in with some remark, such as 'That window of yours just reminded me about a trap, and my wife has been scolding me for a week about forgetting it,' and I always fill my window with a single line or kindred lines. If tools, I use planes, draw knives, spoke shaves, or hatchets and hammers, and put in the window such a quantity as will impress the passers-by with that particular article."

"But," I asked, "how do the boys know what to place in the window each week, especially when you are absent?" "Oh, that is easy," replied he. "We have a window book, and, as we never allow a window to stay over a week, under the date of each Friday for weeks ahead are specified, according to the season, the articles with which to fill the window for the following week." Another dealer who opened the first hardware store in a suburb across the river from a large city filled his window with tacks of all descriptions and sizes, and dropping several worn out and dilapidated shoes among the tacks, placed in the back of the window a placard bearing this inscription: "These shoes were worn out tramping over the bridge for tacks. Come in and save shoe leather."

A PRIZE PAINT WINDOW.

The paint manufacturing firm of John Lucas & Co., Philadelphia, recently offered prizes for the best window displays of paints and brushes. The cut shown on previous page is from a photograph of one of the prize-winning windows.

In the bottom of the window was placed a quantity of paper muslin of a green tint, thrown in loosely in such a way as to make a clever representation of water. On this a couple of toy boats were placed. The suspension bridge was made up—piers, abutments, approaches and all—of all the various sized packages partially hung in a wire frame to show suspension. A small wagon and mule are going up the approach and a cart is in the centre of the bridge.

On the back is hung a board of paint brushes arranged in a pleasing design and the side walls are sample cards of the various colors.

A COUPLE OF INTERIORS.

The two interiors illustrated possess many excellences, together with a few faults. One store which would copy the merits of both would be an almost ideal interior. In Fig. 1, the greatest fault lies in the distribution of the goods—on the floor, on the counters, fastened to the ceiling and placed in almost every possible spot. But, aside from this, great taste has been shown in the number of glass showcases, the seats for customers, the metallic ceiling and the glass-covered shelves at one side.

Fig. 2 is a neater, tidier appearing store, with its lines of clear counters, its neat drawers for the goods, its showcases and racks on which to hang articles. The effect could be vastly improved by removing the stove, which is never necessary in a city store (as this is). The metallic ceiling is greatly superior to even the best of wood.

Both interiors are improved by the use of prism glass.

ABOUT HARDWARE WINDOW DISPLAYS.

By A. Catlin

TO neglect making the best possible use of the windows is to ignore one of the best advertising mediums. A neglected window is sure to lose trade.

The most common of all mistakes in arranging windows is putting in too much, making a kind of "three-ring circus" of it, as I call it. Fancy displays are all right provided the ideas are not too far-fetched. The goods employed should not lose their identity in order to bring out a picture that does not relate to your business.

Give your windows all the light that you can, and your store, too; it looks and is honest.

Like any other picture the background is for effect. Dark behind light, light behind dark, is the general rule. Much depends on the background.

It is easier to get too great a variety than too little into your windows, and so confuse people. Have it so plain that a person can take in the display at a glance.

Fig. 2.—Interior View.

It is desirable to have striking and ingenious displays to attract attention. Beauty and business blend. I often dress my window to attract children. Children take time to study every detail, and they take time to tell it at home, too.

I find I get the best returns from goods relating to housefurnishings. Often the smaller articles used in everyday life

These guns being opened by a lever behind the triggers, it is not necessary to remove your hand from the stock when reloading.

Trigger Guard is divided in two parts, making it much safer than ordinary kind.

This lever is constructed with so long a reach that it is very easy to pull, unlocking the gun and setting the strikers at the same time. Safety catch which locks the triggers directly

The barrel can be taken off without taking off fore-end piece, preventing losing fore-end piece, which happens often with other guns.

DELORME BROS., General Agents, 15 DeBresoles St., MONTREAL.

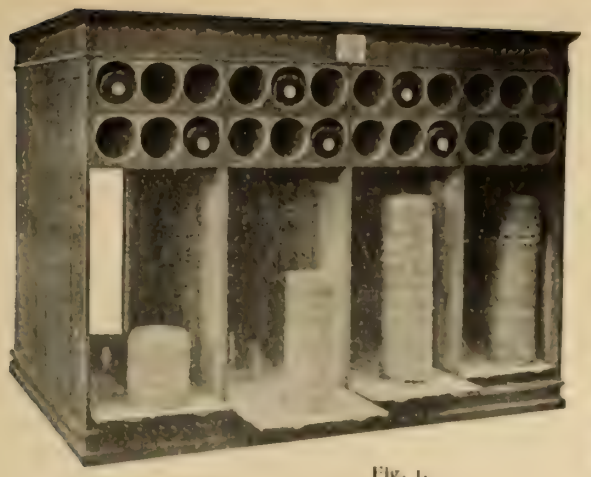

Fig. 1.

sell best, and they pay the largest profit on the smallest investment.

In displaying seasonable goods try and be the first to make a show. Don't wait until the "season is on," nor delay removing when the "season is off."

It is hard to display goods of any kind without injury more or less from light, etc. Sell them as samples for just what they are. Do not have any better goods in your window than can be found back of your counter.

I am sure that it pays to advertise prices on all occasions, but let the price and goods in the window correspond with the price and goods in the store.

If you have an employe who displays a talent in window-trimming have him do that work. Give him credit for it if any one speaks of your window display. Don't do business under false pretenses.

Put the same dress on your window and your newspaper advertisement each week. Change one when you do the other.

When trimming a window remember you are making a picture: 1, the background; 2, the perspective; 3, the foundation on which you build; 4, harmony of arrangement. "Order is Heaven's first law." Don't throw goods into a window.—The Metal Worker.

A LINDSAY WINDOW.

The window of J. G. Edwards & Co., of Lindsay, Ont., as shown in the accompanying cut, possesses some fairly good features. But combined with this is that common fault of too many articles and too great a variety. Skates, saws, crumbtrays and scissors are scarcely a proper combination to put in one window.

The arrangement of hockey sticks at the side is very good, and worthy of a more prominent position. The scissors also are well shown. The hanging rows of skates and the front display are good plans for a separate window display. Large saws displayed in this way are a trifle awkward in appearance, but a floor arrangement could have been effectively made of cross-cuts, with bucks and fancy saws hanging above with some symmetry.

TWO HANDY DEVICES.

The ingenuity of fixture manufacturers is being constantly taxed to its utmost powers by modern demands. Everything now has its own case and position, and the result is neater and more convenient stores.

A Chicago firm has recently designed two new fixtures that will, no doubt, interest hardwaremen in Canada as well. Fig. 1 is a wire screen and netting case, and is the result of an indefinite want expressed by a hardware firm. The floors are moveable enabling the rolls at the back to be easily taken out, and for smaller rolls the pigeon holes above are very convenient. The fixture is certainly required in a hardware store as rolls of netting left exposed are untidy in appearance, and subject to injury.

In Fig. 2 is shown a glass counter. Underneath the counter are divisions built in all sizes to fit the different sizes of glass. The result is greater neatness, convenience and safety.

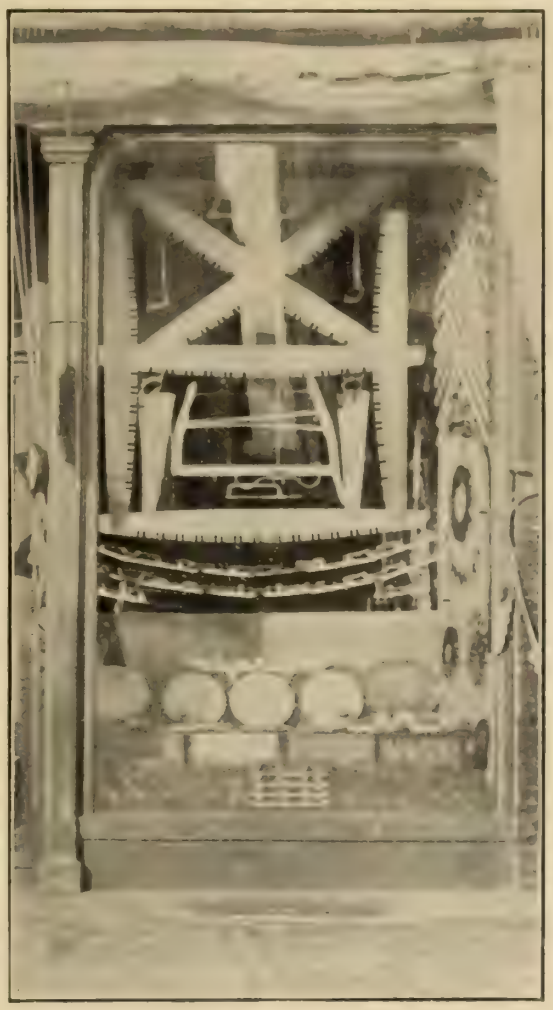
CLEAN WINDOWS.

It makes very little difference how much time, attention and money you may spend on the decoration of your window, if the glass is not clean the whole display is spoiled. The most important part of the exhibit is the cleanliness of the glass the spectator must look through.

To keep the window clean will require more attention in the summer than in the winter, and in the warm weather when the snow is off the ground a daily wiping of the window is necessary. It may not be necessary to wash it every day, although many merchants do it that often. However, the dust that naturally gathers should at least be wiped off, and wiped off so that it will not look "streaky."

Another prominent factor in the appearance of the show window is the freshness of the paint on the store front. Even clean windows and good displays lose most of their effectiveness if the woodwork looks dingy. Many merchants paint their store front only once in five or six, or even ten years, but such methods are gradually falling out of style. I believe if you paint your store-front every year you will find it a profitable investment, and increase your self-respect. A man who has an untidy appearing store-front seldom amounts to much in or out of business.

The first impression is the most lasting, and if you can impress your town's-people through your store-front that you are doing a clean, up-to-date business you will find that they will want to know more about you. If you would take the pains to present a good front you would



A Lindsay Hardware Window.

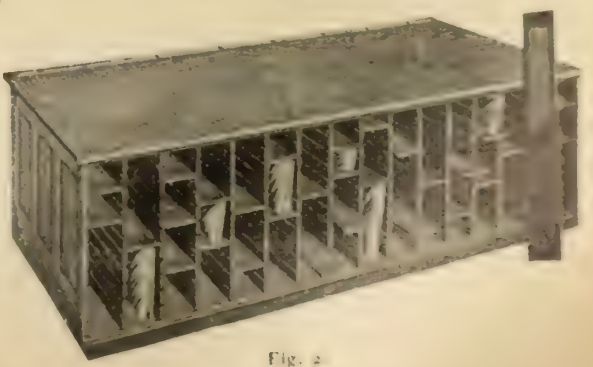


Fig. 2

actually not fail when it came to the arrangement of the store interior. But if you do not think it worth while to spend money on the front of your store, passers-by will know that you certainly will not take much trouble inside.

A HARDWARE TURNOUT.

The "hardware turnout" herewith sketched is taken from a window display made by a hardwareman in Iowa.

The horse is constructed by making a framework of wood and wire, covered with screen wire and then cloth. The body is covered with washers of diferent sizes; and the head with nails. The ears are hinges, the mane and tail ravelled rope, and the legs and ears trough outlets. A nut serves for an eye.

The driver is made up of tinware, three pans and a pail forming the body, a pint cup the neck, a smaller pail the head, a pan the hat, outlets the legs and wooden faucets the arms. The ears are padlocks, eyes are nuts, the nose is a coffee spout and the mouth a measure lip.

Grindstones form the wheels of the wagon, with a framework constructed to hold the contents. The seat is made of two bread-pans set on end, with another one across the top, or a large bread-box will serve the purpose. The sides of the wagon are paint cans; inside these can be piled a heap of tinware if desired. The shafts are fork handles and the singletree is a hammer handle.

The lines and harness are made up of rope, the tugs are chains. The feet of the horse are cake-cutters, while nutmeg-graters form the feet of the driver.

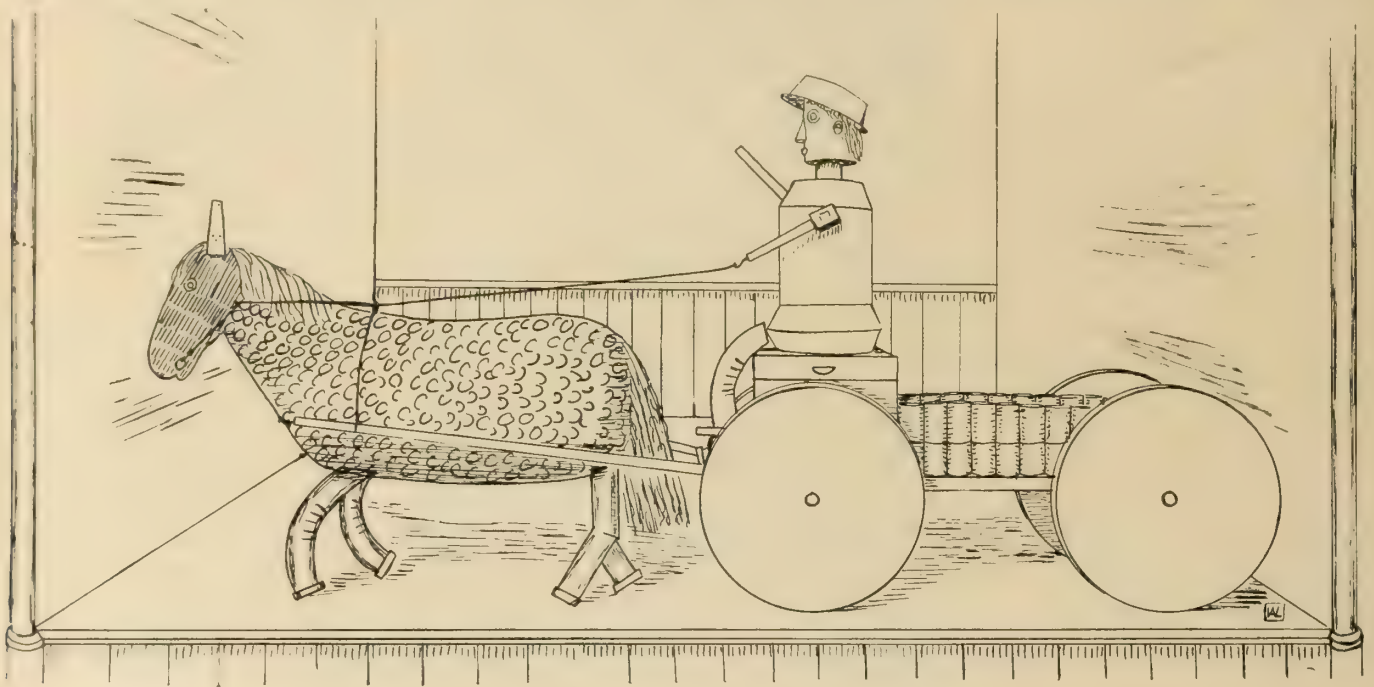
The whole display is fastened together with string and wire, and is not as difficult to construct as one might imagine. The effect is a decided attraction, and would well repay any merchant who would undertake to construct it.

A LONDON HARDWARE WINDOW.

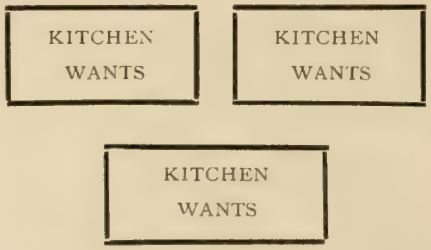
By W. H. L.

A DISPLAY of hardware in a well-known store in London, this week, was so effective in carrying out the idea intended, and so catchy in the display, that quite a crowd stopped to look and admire, and some to go inside to purchase. The display consisted of kitchen wants, and this was intimated by three cards of white pasteboard, neatly printed in black letters. This is something that is constantly appealing to the good housewife, and many halted to inspect the exhibit.

This window had strips of heavy glass 5 in. wide, fastened on each side, one above the other about 20 in. apart, with mirror behind which reflected both during the day and in the electric light. On these glass strips were placed graniteware, coffee and teapots, flour sifters, stew pans, tea-kettles, moulds, small and larger brass lanterns, with smaller articles to fill spaces between.



A Hardware Turnout.



On the bottom of the window a slight elevation was obtained with a board at the back; and from the front to the rear of the bottom were gas stoves, oil stoves, broiling pans, coffee and spice mills, frying pans, hand shovels, ladles, graters, pie plates, carving sets, celery glasses, dippers rolling pins, potato mashers, etc. The bare spots were tastefully filled in with the numerous little things so essential in household economy, such as papers of tacks, clothes pegs, tack hammers and larger hammers, whisks, trowels, cuspadores and bars of soap.

A good background was effectively produced with some of the bigger sorts of tinware, which completed a very stocky and well arranged bottom. These were clothes boilers, milk strainers, dust pans, colanders, stew pans and other articles needed in the cellar or kitchen. The top was hung with brass and painted bird cages, lanterns and brooms.

Many windows show more artistic arrangement in placing the goods on exhibition; but the pleasing and attractive points in this window were that they started out to show a window of kitchen wants, and as all the goods shown were useful necessities, allied to kitchen work, the attraction of the public was secured.

PAPER-COVERED BOARDS.

Large boards covered with colored paper and surrounded by a narrow moulding are of great service in displaying hardware. The boards are inexpensive and can be moved about to the best advantage. They are also very durable, as they can be recovered with fresh paper whenever they begin to look dingy. Any color of paper may be used except red or green, which have a tendency to deaden the effect of highly polished tools.

CLERKS' DEPARTMENT

LOYALTY TO EMPLOYERS' INTERESTS.

By A. H. B

HOW much better it is to have a contented staff of clerks who endeavor to further their employer's interests, than to have a staff who are constantly brooding over personal grievances? When the spirit of discontentment prevails, the blame cannot always be placed upon the clerks, but this spirit is, in a large measure, attributable to the attitude of the heads of concerns towards their clerks. There are doubtless many young men who would much prefer to work for a smaller salary for a man who, to a limitable degree, takes him into his confidence and consults him on matters concerning the promotion of his business, than to be employed by an establishment at a little higher wage where clerks are looked upon as mere machines. It pays to encourage your clerks to take a personal interest in your business. Make your employes feel that they are important factors in the conducting of your business.

According to an article in a recent issue of Profitable Advertising, a well-known banker in the United States encourages each member of his staff to regard himself as an integral part of the firm, and to always speak of the firm as "our firm." As a result of this policy, every employe is imbued with a proper pride in the house, and his duties are performed with greater zeal and accuracy. It would prove beneficial to the interests of every wholesaler and retailer to make each clerk feel that it is to his interest to promote the interests of his employer.

SUGGESTIONS TO HARDWARE CLERKS.

THE success of the hardware store depends in no small measure upon the personnel of the employes in that store, writes "E. I." in Iron Age. Many a merchant can attribute much of his success to the efforts of the man behind the counter. Many a lad starting a business career as errand boy has in time become manager and proprietor simply by hard work and close attention to business. Illustrations of these self made men are seen in every branch of the mercantile business. The future offers as great a chance as has the past, and it depends on the clerk alone whether or not he will always be behind the counter.

No retail business requires more intelligent salesmen than does hardware. Courtesy, thoughtfulness and intelligence are needed in the clerk of any store, but in no salesman are they as essential as in the employe of the hardware store; and nowhere will these requirements, together with honesty and hard work, count for more than in this business. Generally, when a clerk fails to be promoted, he has failed to earn promotion—in fact, does not earn the salary he gets. And right here is a never-failing recipe for a rise in salary: Work as though you were being paid twice the wages you are getting—be worth to your employer twice as much as you are getting, and it will be only a question of a short time before you'll get what you are earning, will get it from your present employer or from another.

Never be idle. There is not a hardware store where there is nothing to be done. And this is just the reason why I say the hardware store offers such opportunities to the fellow who is willing to work and wants to learn. No matter what you may be doing, never forget that the most important thing is to sell and to show your goods. Do not let a customer wait; a half-minute's waiting in a store for a clerk to come forward seems a longer time to the customer than waiting ten minutes for a street car. Take pains to show a customer any goods that he may even ask about. Let him see that you are not lazy and that you desire to please him. Meet every customer in a pleasant way, no matter how unpleasant you may feel. Clerking in a hardware store is a good occupation in which to learn and develop self-control, and having self-control has made some men rich.

When a clerk begins to think he is worth more than he is being paid, if he is sour on his job, the best thing he can do is to get out before he is kicked out. It is uphill work for a clerk to succeed who is constantly watching the clock, who is ever worrying about being late for his meals or is afraid of working overtime. Always be ready to work and to think about things in the store, and endeavor to display goods attractively. If, after a few years, promotion comes and you step forward ahead of some other employes, be very careful about the swelled head. Do not get thinking that you have learned the hardware business—that will take a life time—and never grumble against your employer. Sometimes his way may not seem like the right way, but generally it is true that his longer experiences have taught him lessons that you have yet to learn.

Above all, be honest—honest with your employer, honest with the customer, and honest with yourself.

TAKE THE STRAIGHT ROAD TO YOUR GOAL.

IN the early days of railroading, in laying a track through hilly or mountainous regions, engineers went around most of the hills and curves, followed the valleys, and often turned aside from even slight obstructions.

Many young men, in laying the tracks of their careers, remarks Success, follow the methods of early railroad construction. They avoid every hill of difficulty, go around long curves, turn aside from every obstruction, no matter how trifling, and always follow the line of least resistance.

In our day, however, railroad engineers, in laying a track, follow as direct a route as possible. They go through hills, tunnel mountains and span huge gorges, not only because a straight line is the shortest distance between two points, and thus saves time, but also because it lessens the risk of being wrecked.

A young man who believes that making a life is more important than making a living, will follow the methods of the modern railroad engineer. He will not shrink from the obstacles that spring up in his path. He will not creep around hills or mountains of difficulty. He will forge the way to his goal by the shortest and most direct route, no matter what opposes his passage.

It costs a railroad company more to tunnel mountains and span chasms than it would to build its road around those difficulties, but the time saved to its passengers and the risks avoided by following the safest and most direct route more than trebles its profits.

So, it costs a young man more in energy and perseverance to span abysses of ignorance, to force his way through mountains of difficulty, in order to attain a sound education and special training for his work; it takes more effort and self denial to build a straight, well-made road through the hilly, rock-strewn country to life than to make a long, winding, uneven road by avoiding the hills and rocks of opposition; but, like the engineer, you will find yourself more than trebly repaid for your trouble in forcing your way through all obstacles to your goal.

A straight road for one's career means honesty, the respect of those who have any dealings with you, the confidence of your bank, good credit, a high standing in your community, influence, individual power, enlarged opportunities for doing good, and, crowning good of all, it means self-approval.

THE PORTLAND CEMENT INDUSTRY IN CANADA.

A REVIEW OF ITS HISTORY.

A FORECAST OF ITS FUTURE.

By D. O. M.

AS far back as the time of the Pharaohs cement was manufactured and liberally used; yet it is only during the last 10 or 12 years that the world has appreciated the value of this, one of the cheapest of manufactured materials. Now, however, mankind, seems to be endeavoring to make up in a decade or so for the neglect of centuries.

Among the many notable developments of Canadian industries during the past six or seven years, none has been more remarkable than the wonderful expansion in the use of Portland cement, and, in consequence, the unprecedented increase in its production in Ontario.

In fact, the natural growth of the cement industry has been so rapid and continuous that the attention of the promoter and the speculator has been directed to it, with the result that in almost every section of the Province marl deposits are being exploited and companies are being formed with large capital to engage in the manufacture of the product.

In 1896 there were but two Portland cement works in Ontario, and their output was less than 80,000 barrels. Last year there were nine factories, with a total production of 583,899 barrels. There are now organized or in course of organization, as many more companies, with a total capacity estimated at from 1,200,000 to 2,000,000 barrels.

Naturally, such an immense increase in production has aroused much interest in the subject and opinions are freely expressed as to the wisdom of moving forward so rapidly.

The argument has been made in the daily press and in at least one commercial paper, that this expansion is bound to lead to over-production and consequently to demoralization, if not disaster. It is urged in reply to those interested in the promotion of new companies that these articles have been inspired, if not written, by parties interested in existing companies, who are anxious to retain for themselves an industry and a market which is yielding handsome dividends.

However near the truth either of these arguments may be, the fact remains that an unbiased and comprehensive study of the situation has not yet been presented, the majority of the deductions having been based upon decidedly incomplete data.

In the first place, estimates of the production have been based on the statements of capacity, which have proved utterly misleading. An instance of this is given in an article published in a contemporary a short time ago, wherein the estimated output of Canadian companies was given as follows:

	1902 output. Bbls	Probable 1903 output Bbls.
Owen Sound Portland Cement Co., Shallow Lake Ont.	150,000	150,000
Canadian Portland Cement Co., Strathcona and Marlbank	275,425	425,000
Imperial Portland Cement Co., Owen Sound Ont.	50,000	100,000
Hanover Portland Cement Co., Hanover, Ont.	50,000	50,000
Crescent Portland Cement Co. Longue Pointe, Que.	90,000	90,000
Lakefield Portland Cement Co., Lakefield, Ont.	125,000	200,000
Sun Portland Cement Co., Owen Sound, Ont.	25,000	100,000
Grey and Bruce Portland Cement Co., Owen Sound, Ont.	25,000	100,000
National Portland Cement Co., Durham, Ont.	25,000	300,000
Total barrels	815,000	1,515,000

These figures are based on estimates prepared by the companies interested, but are only useful as an estimate of maximum capacity. For purposes of comparison, the official statement of actual production, taken from the Ontario Bureau of Mines, is worthy of study:

PRODUCTION IN ONTARIO.

	Quantity, Barrels	Value
1895	58,029	$111,372
1896	77,760	138,240
1897	96,825	170,392
1898	302,037	561,266
1900	432,154	928,045
1901	450,060	564,355
1902	583,899	916,341

It will be seen from the above that whereas the capacity in 1902 was 815,000 barrels, the production was but 583,899 barrels. An even greater allowance will have to be made between the capacity estimated for 1903 and the actual output during the year. It is, in fact, doubtful if their total production will reach 1,000,000 barrels this year. To this, however, must be added the output during the season of plants now under construction. What they can produce this year is largely a matter of presumption, for no company installing heavy machinery to-day can be sure within two or three months when deliveries will be made. But, for

The Most Modern Type of Silo—Built of Portland Cement.

purposes of calculation, it would be well to take the maximum production probable, say 200,000 barrels.

Then the question arises, will the market take 1,200,000 barrels of cement this year and possibly 1,800,000 barrels the following year? During the past seven years the imports of Portland cement have been as follows:

IMPORTS OF PORTLAND CEMENT IN CANADA.

Years	Great Britain	Germany	Belgium	United States	Total
1896	bbls. 98,307	12,814	79,674	8,279	205,186
1897	" 88,235	16,700	84,713	25,137	217,798
1898	cwt* 89,243	187,387	533,609	146,361	1,153,640
1899	do. 429,580	192,161	731,402	80,867	1,434,844
1900	do. 481,039	148,207	464,150	79,754	1,313,170
1901	do. 867,242	187,234	415,918	435,847	1,614,666
1902	do. 397,679	98,949	382,365	1,183,408	2,022,566

*One barrel contains approximately 3½ cwt.

It will be seen from these figures that the consumption has increased even more rapidly than the production, the imports last year being 2,022,566 cwt., or about 577,876 barrels. It is worth noting that the imports last year were of just about the same magnitude as the production.

The total consumption (production and imports) last year was 1,171,775 barrels, as compared with 282,946 barrels in 1896, an increase of over 25 per cent. per annum. At this ratio of increase the consumption this season should be about 1,364,719 barrels, and next year about 1,705,898 barrels. The question then arises will the ratio of increase be greater or less than 25 per cent? The only data that seem to bear on this phase of the question is summed up in three facts (a) that owing to the scarcity and high price of cement toward the end of last season many contracts were left over; (b) that the demand at the moment is absorbing everything offered; (c) that the increase of both consumption and production in the United States has averaged from 40 to 60 per cent. The figures relating to the industry in the United States are interesting:

THE INDUSTRY IN THE UNITED STATES.

	Production bbls.	Imports cwt.
1890	335,000	.....
1895	990,324	.....
1900	8,482,020	9,546,734
1901	12,711,225	3,779,569
1902	15,000,000	7,979,161

The year 1901 was a hard year in the United States cement industry, and prices were cut down to what some critics called a ruinous figure; yet last year shows a wonderful increase in both production and import, and somehow prices have resumed a satisfactory level. What is the explanation? Simply that when prices went down new channels of trade were found, the consumption widely increased; in short, the market found its own feet and moved ahead nicely.

When the statistics are examined conscientiously and the facts carefully considered it seems reasonable that the Canadian market is capable of absorbing the domestic production of cement for the next few years at any rate.

There is a phase of the question, however, that has not yet been considered, but which is suggested by T. W. Gibson, of the Ontario Bureau of Mines. Some of the keenest minds have predicted an industrial crisis in the United States. Whether it will come in the next four or five years is a question, but if it does come the enormous consumption of cement in that country will be checked. The principal plants in the United States are not only large, but modern in every respect, producing in the most economical manner. When the United States producer finds his home demand curtailed he will seek foreign markets, and Canada will receive his first attention, despite the duty of 12½ per cent.

Germany, Great Britain and Belgium have already experienced a depression in their cement industries, but the condition of their market had but little effect on the Canadian. It is satisfactory, however, to learn that these markets have recovered from the depression and are now in a healthy condition.

Everything considered, the only plausible danger that might affect the Canadian cement trade is an industrial crisis in this country or in the United States. And fortunately this is not anticipated in the near future, at any rate.

TRADE ON A BETTER BASIS.

ONE of the gratifying signs of the times is the trade improvement in Germany. During 1900 and 1901, and part of 1902, the industrial condition of that country was grave indeed. Failures were numerous and trade depressed. This, at a time when other industrial nations of the world were enjoying a high state of prosperity, was particularly marked.

There were two chief causes for this depression. One was the too rapid development of the manufacturing industries, and the other the over capitalization and heavily stock-watered commercial enterprises.

When the crisis came, as it must under all such circumstances, these enterprises could not stand the strain. Then confidence departed and the consequent depression followed. For some months conservatism has obtained; confidence is being restored and the gradual recovery of trade has followed.

In the iron and steel trade this recovery has been perhaps more marked than in any other branch of industry. This may, no doubt, be due to the fact that there has been a heavy demand on the United States, and, to some extent, on Canadian account, owing to the extraordinary scarcity of iron and steel on this side of the Atlantic. Reports, which have been received in Canada during the last few weeks from Germany, show that metals and shelf goods are advancing in price, and that still further appreciations in value are to be expected.

In spite of the unpleasantness which has existed between Canada and Germany, as a result of our having, six years ago, induced the British Government to abrogate the commercial treaties, and the consequent refusal of the latter to allow Canada to participate in the provisions of the new treaty subsequently made with Great Britain, Canada cannot be uninterested in the industrial condition of Germany. Last year our aggregate trade with that country, taking exports and imports, amounted to $13,500,000. Although these figures are small indeed, compared with those which represent our trade with the United States and Great Britain, they are, however, larger than those with any other country outside of the two mentioned.

It is to be hoped that in time the trade relations between Canada and Germany may be improved, and that the disability under which our products now enter the latter country may be removed.

MERCHANTS AND BETTER ROADS

THIS should be a good time to promote the cause of good roads. From all over Canada come reports of quiet trade at country points on account of the bad condition of the roads.

This is nothing new. It is the experience of every spring. That, however, at the same time is no excuse why efforts should not be made to minimize the evil.

With trade almost at a standstill in many parts of the country, the loss must be very large indeed every spring to both business men and the farmers. By putting the roads in proper condition the interruption with traffic at this time of the year would be very much reduced. It will cost money to do this; but where an intelligent effort has been made to improve country roads, the results obtained have more than warranted the expenditure.

If the business men in country places would actively preach the subject of good roads, and impress upon the farmers in their respective localities the financial advantages which would accrue therefrom, vehicular communication between the farm and the store would become less interrupted, business would be more regular and payments prompter.

DOING ONE'S BEST.

NOTHING is lost by putting one's best effort into one's work. Customers, employers or the public may at times be tardy in recognizing worth, either in services rendered or in quality of goods offered for sale, but to do things thoroughly is the only highway to success.

Success is not merely obtaining applause to-day, or finding a market for to-day. Success is permanency. In manufacturing goods or in selling them, in laboring for himself or for someone else, it is the spirit that should actuate all men.

There are some who pretend at least to be doing their best where the single object is to courting praise. When impelled by such motives no man can really do his best. He may try to persuade himself that he is doing his best. But while he may deceive some people part of the time, he cannot deceive them all the time.

The best is only done when the aim is perfection, whatever the possibilities of reward or recognition may be. In other words, in the manufacturing of goods or in the selling of them; in the performance of any duty either important or unimportant, there must be the same spirit that stimulates the artist in the painting of a picture or in carving a thing of beauty from a cumbrous block of stone. In the artist we call this quality love of art. In the merchant we call it love of business, and in the manufacturer love for the particular class of goods which he makes; in the employe, love for excelling in the performance of duties.

But, however intense a man's desire may be to do a thing well, he can only do this when he has mastered [illegible] his profession or the details of [illegible] whatever it may be. He has, therefore, to be diligent in learning [illegible] well that which is [illegible] his vocation.

THE STEEL RAIL TARIFF.

AMONG the items which the tariff commission that visited Ottawa asked the Government to consider was that in regard to steel rails.

Rails used by steam railways are upon the free list. The deputation asked that these be placed on the dutiable list. While the rate of duty asked was not stated by the deputation, it has since been learned that the amount proposed is $7 per ton, which, at the present market price, would be about 25 per cent. Mr. Clergue, who spoke in favor of the proposed duty, said that the mill of his company at Sault Ste. Marie had cost $10,000,000.

It is only since the mill at Sault Ste. Marie, Ont., was erected last year that an active campaign has been started in favor of protection to the rail-making industry. True, it has been periodically advocated by some newspapers for several years, but, as no rail mill existed in Canada, the movement was not taken seriously. The case is now altered. The mill at Sault Ste. Marie has a capacity of 500 tons per day. On account of the competition of German rails the company found that, after operating the mill for a short time, it could not profitably continue to do so under existing tariff conditions. Mr. Clergue has declared that as long as these conditions exist the mill will not be operated.

In 1887, when Sir Charles Tupper, the then Minister of Finance, brought down his famous iron tariff, rails were continued on the free list. As the tariff provided for duties in so many lines of iron and steel, Sir Charles thought it necessary to explain why no provision was made for encouraging the manufacture of rails.

"The Government does not propose, at this moment," said Sir Charles Tupper, "regarding increased railway development of the country as one of the vital essentials of progress and prosperity, to include in this arrangement what the United States has done, and was done with such success, and that is to apply it to steel rails. We propose that all shall come in free, as they have done in the past, because we consider that should be made an exception. I do not hesitate to say that the adoption of this policy will, in my judgment, place Canada in a position where she will be able to provide her own rails, and that at no distant period, at as reasonable a rate as any country in the world. Why should we not do so? Show me any country possessing as many miles of railway as Canada does, that does not manufacture its own rails? It cannot be done. There is no country in the world with 12,000 miles of railway in operation that does not manufacture the rails used there."

The railway mileage of Canada has increased a great deal since Sir Charles made that Budget speech. The mileage up to the end of the last fiscal year was nearly 19,000 miles, and the railways that are now in course of construction, with those which are likely to be started in the near future, will greatly swell these figures. It will, therefore, be readily seen that Sir Charles Tupper's remarks in 1887 in regard to the increased railway development of the country apply to the present day as well as to the past. The question, therefore, naturally arises: "Is it to-day a sufficient reason for refusing to place steel rails on the dutiable list?"

During the last five years Canada has spent on steel rails $12,387,000. To place a duty of 25 per cent. on these rails would have represented an additional cost of a little over $3,000,000, that is, of course, reckoning that the purchasers paid the duty.

We have in Canada dealt quite liberally with the railway companies. Up to the end of the last fiscal year we had in loans, bonuses, etc., granted the railways of this country nearly $233,250,000. This is not taking into consideration the large land grants, of which the C.P.R. alone received 25,000,000 acres.

In view of this, therefore, does it not seem reasonable to ask that some encouragement should be given to the steel rail manufacturing industry of the country. Possibly the specific duty of $7 per ton may be rather large, but it must be remembered that this is the rate that obtains in the United States, while in Germany the rail manufacturers receive a liberal bonus, which enables them to lay down steel rails at Port Arthur, Ont., at lower prices than they can be bought in Berlin.

Excessive protection is not a good thing, and in the long run militates even against the interests which enjoy it, breeding, as it does, opposition, where a moderate tariff would be left severely alone. It seems reasonable that under the anomalous conditions which exist to-day some encouragement should be given to the rail mill at Sault Ste. Marie.

With a moderate amount of protection it is, no doubt, likely that the Dominion Iron and Steel Works, at Sydney, to say nothing of The Nova Scotia Iron and Steel Co. would also have steel rail mills in operation.

CANADA'S FOREIGN TRADE.

THE remarkable proportions of Canada's foreign trade when compared with the population of the country has aroused considerable comment from time to time. In the year ending June 30, 1901 (the year the census was taken), our population was 5,338,083, and our total exports and imports, $386,903,157, showing a trade of over $72 per capita. Last year the total trade was $423,910,444, and our estimated population 5,500,000. Thus our foreign trade aggregated at least $77. Our foreign trade this year, if the growth shown in the past seven months be continued, will be over $460,000,000, which would show a foreign trade of over $80 for every man, woman and child in the Dominion.

We hear so much of the "industrial supremacy" of the United States that it is interesting to point out that the total foreign trade of the United States last year was $2,330,022,888, less than $30 per capita. And what is still more significant is that Canada's foreign trade is much larger than that of the United States in 1850, when that country had a population of 23,191,876. Canada may not have a large population, but it is a factor in the world's commerce.

AN ERA OF EXPANSION.

MUCH has been said and written regarding the wonderful developments—industrial, commercial, national which have taken place in Canada during the past few years, and of the more wonderful expansion prophesied in the immediate years to come. Yet too much has not been said.

The phase of the question, however, that interests the retail hardware dealer is what this development is likely to mean to his business. There is no doubt but that the past six or seven years have added materially to the volume of business done by the average hardware dealer. In many cases the retailers have been enabled to put their business on such a sound basis that the question to-day is, what should be the next step of progress?

Some may reason that their business has about reached its limits, that they can well afford to use some of their capital for enterprises entirely outside and apart from their regular business. This opens up new dangers, and dangers which may lead to unexpected difficulties. No matter how successful a man may be in one line, he handicaps himself when he divides his interests, when he devotes time and thought to matters quite foreign to his retail business. He may not be able to concentrate enough thought on either to make it pay as well as that which has hitherto received his undivided attention.

Andrew Carnegie's advice, "Put all your eggs in one basket," was given by a man whose judgment is recognized as sound.

Then, if a retailer has reached what seems to be the limit of his business, yet has some surplus capital to invest, what is he to do? Extend his own business into lines which he can sell to his present customers.

HARDWARE AND METAL has for some time taken the ground that the hardware dealer at every point in Canada should be the source of supply for practically everything into which hardware, metals or machinery enters. There are many articles which he could not carry in stock, but which he, acting as local agent, could sell from illustrated catalogues or, when the order is important enough, through an expert from the manufacturer he represents.

This suggestion is emphasized in greater detail elsewhere in this issue. The experience of several retailers is cited. There are but a few of the many retailers in all parts of the Dominion who, after mature deliberation, have widened the scope of their business with results eminently satisfactory. An instructive feature of the question is that the dealers who have added to their stock some kindred lines have found their trade in regular shelf hardware materially increased as a result. It is interesting, too, to note that retailers who have added several lines say that there seems no limit to the number that can be carried with profit and advantage in connection with their business.

The advertisement is a lubricant which will facilitate the movement of merchandise that is worthy of being pushed.

POSTAL RATES FROM BRITAIN TO CANADA.

WRITING recently from Vancouver, the United States consul there points out to his department at Washington that matter mailed to Canada only carries the same rate of postage as if mailed to any point within the confines of the United States. He goes on to say that the reason he refers to the matter in his report is that he is regularly in receipt of newspapers, etc., on which a 5c. stamp has been placed, when a 2c. would suffice.

This report of the consul should bring home to the people of Great Britain the peculiar disadvantages under which they labor, in comparison with the United States, in sending newspapers and periodicals to Canada.

As our readers are well aware, the Canadian Postmaster-General some weeks ago succeeded in inducing the British Government to allow us to send newspapers and periodicals to points within Great Britain at the same rate as if mailed to points within the Dominion.

In a letter the other day to the Montreal Board of Trade, Sir William Mulock said that it was four years since he first made application to the Imperial Government for permission to do this, so that it has taken all that time to move the postal authorities from their position. While they have, however, conceded this one point, they have so far refused to allow newspapers and periodicals to be mailed to Canada at the same rate which obtains at home.

The newspapers and the magazines, outside those of our own country, which are to be seen in the bookstores and news stands of Canada are nearly all from the United States. It is a rare thing indeed to see an English newspaper or periodical offered for sale. We should think it no exaggeration to say that for every English publication received in Canada, there are ninety-nine American. The excessive rates on newspapers and periodicals from Great Britain to Canada is not entirely traceable to this fact, but it has, no doubt, materially assisted in bringing about the present condition of affairs.

Politically, the dissemination of American literature is not to the advantage of Great Britain, for in spite of the cordial relations between the two countries, the magazines and newspapers printed in the United States contain much that reflects on British customs and prestige; but there is another phase of the matter, which is not always taken into consideration, and that is in regard to its effect on commerce. British magazines and newspapers contain a great many announcements in regard to the products of the home factories. Naturally Canada is desirous of retaining as much of her home trade as possible, but if the advertisements of other counties are to circulate among our people, they naturally prefer that it should be those of the Mother Country rather than those of the United States, our greatest competitor. This is a point which should influence [illegible] business men and force the Imperial postal authorities to discontinue [illegible] sighted policy.

Crown Brand

NERLICH & CO., TORONTO

A Crown was meant for the Head

and at the head we have placed the **"CROWN."** No other sporting goods line has won such universal commendation and come into such general use, in so short a time as has the **"CROWN."** There are two especially strong points about the **"CROWN"** sporting goods. The name guarantees the quality—you know that and the people know it. That means you can **sell "CROWN."** And then, you, as a retailer, can realize a fair profit without putting on a sky-scraper price. You might as well have that profit.

"Crown" Tennis Rackets.
"Crown" Baseballs.
"Crown" Baseball Mitts.
"Crown" Baseball Masks.
"Crown" Lacrosse Sticks.
"Crown" Croquet.

AND ABOUT WHEEL GOODS

Children's Steel Box Waggons, Velocipedes, Tricycles, Coasters, Dog Sulkies, Toy Garden Barrows, etc. Are lacking in nothing that is good—Splendidly finished, attractive goods.

Our Catalogue tells you far more about Sporting or Wheel Goods than we can tell you here. Yours for the asking. When you write mention HARDWARE AND METAL.

SPORTING GOODS

SPORTING GOODS IN THE HARDWARE STORE.

A Line Worthy of Increased Attention.

DURING the past few years there has been a large extension of the sale of sporting goods throughout Canada. Three causes have contributed largely to this increase: (a) an awakening of interest in exercise and outdoor sport; (b) greater wealth in all parts of the Dominion, and (c) shorter hours of working in many trades and professions.

Hardware retailers in the majority of places have recognized this development and have, to a large extent, met the demand by carrying a fairly wide assortment of sporting goods. Yet, in almost every retail hardware store in the country there is room for further extension; these are lines which could be readily sold and at a satisfactory profit.

That sporting goods are proper stock for the retail hardware store is unquestionable.

Many lines are not sold by any other class of retailer than the hardware dealer, this being most particularly the case with guns, ammunition, and the heavier lines of athletic goods. In the other lines, which are handled by fancy-goods houses or general stores, the tendency is steadily towards a decrease in the number of lines handled by these houses and the increase in the proportion handled by the hardwareman.

FISHING TACKLE.

Of all lines of sporting goods, fishing tackle, probably, necessitates the most thorough and detailed knowledge of the local requirements of trade. The class of fish caught in the different Provinces and in various parts of each Province is quite distinct. Even in two neighboring lakes it is necessary to have bait of different color, owing to the water in one lake being considerably darker than in the other. The local dealer, however, will not find it difficult to secure the knowledge necessary to supply fishermen with exactly the kind of tackle, artificial bait, etc., which is needed. Once this knowledge is secured and a trade worked up, this line becomes a very profitable one, the margin being considerably higher than in many lines.

GUNS AND AMMUNITION.

There is little necessity to-day of advising hardware dealers to carry a complete stock of guns and ammunition. Sporting men in Canada invariably turn to the hardware store for these goods, so it is a question not of whether the goods should be sold, but how they can be handled to the greatest advantage. It is true of this line, as it is of several others in a hardware store, that although it is expensive to carry a complete stock, yet it is only by doing this that one can make the most of the trade. The hardwareman who knows everything about guns, understands ammunition well and can talk intelligently to customers regarding their needs for shooting any kind of game is not common, but those who are posted in this manner not only have a reputation, but are doing a business that is well worth taking pains to get. The display of these goods is important. A progressive retail firm in Eastern Ontario has a large glass case, fitting in one side of his wall, in which guns are hung up. This makes a nice display and the guns can conveniently be shown from it, there being no counter in front of the showcase.

ATHLETIC GOODS.

Lacrosse, baseball, cricket, football, hockey and skating supplies are to-day recognized as hardware lines in practically every district of Canada. In some towns, however, the hardware trade do not push the line, and much of the business is done by the local clubs through catalogue houses. This should not be, and would not be, if the local retailers fully understood the wants of the clubs and kept a stock likely to satisfy these clubs. It is not difficult to find out early in the season what sports are likely to "boom." When this information has been secured, it is best to go to the secretaries or presidents of the clubs organized, and try to secure their orders. When any sport is "booming" there is always a demand for cheaper goods than those used by the senior club of the town. The youthful fancy readily makes a hero of a successful athlete and is fired with a great ambition to follow in his footsteps. So he gets a lacrosse stick or a baseball bat and "gets down to practice." The trade thus created in a town is no insignificant item during the season and hardwaremen find it wise to push these goods to the limit.

The demand for dumb-bells, Indian clubs, golfing materials and other lines has grown largely in the cities and in many towns, owing to the desire for exercise. The trade can be developed anywhere by persistent pushing. A good way to develop it is to secure the publication in the local papers from time to time of articles dealing with the value of regular exercise. This should be merely suggested, without reference to any firm or even to the kind of goods to be used. That can be done in the regular advertisement.

In a large number of Canadian towns hardwaremen sell canoes, and in some cases, gasoline launches. These goods are not sold from stock, a catalogue being satisfactory. Paddles, oars, oar locks, etc., are kept in stock, however.

The lighter lines of hardware have been neglected by many hardware retailers, though the line is one that yields a good profit and amounts to a considerable total in the year. It would astonish many retailers if they knew the number of orders for tennis racquets, boxing gloves, punching bags, etc., that are sent out from their town in a season to the catalogue houses. It is but reasonable to expect this to continue as long as the customers cannot be supplied locally. Yet the prices charged by the catalogue houses are such that the local retailer could get practically all this trade and have a good margin for himself.

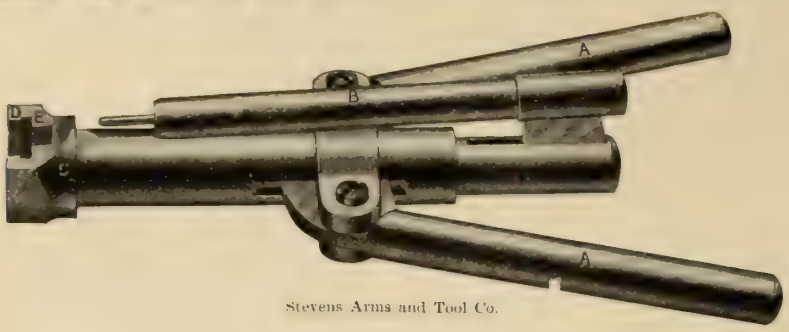
CHILDREN'S GOODS.

The custom of the children is made up of small items, but it aggregates to a volume in a year that makes it well worth the trouble and expense necessary to get it. In the summer, marbles, tops, skipping ropes, children's wheel goods, etc., are always in demand. The trade to-day is divided between the fancy goods and the hardware stores. In some towns fancy goods dealers do the bulk of the business, in others, the hardwareman gets the lion's share. It is really a matter of pushing, of shrewd retailing. But the odds are in favor of the hardwareman, if he makes a feature of the line once in a while.

Taking all lines of sporting goods into consideration it is at once seen that the possibilities are so great that hardwaremen who are neglecting these goods would do well to get catalogues from the leading jobbers, advertisements of most of whom will be found in [illegible], and study up the question. If this were done it would, in all probability, get for these retailers a share of trade that now goes to the catalogue [illegible].

NEW "STEVENS" GOODS.

THE Steven's Arms and Tool Co., of Chicopee, Mass., are putting on the market this season a re and de capper, for which they claim many excel ent features. The design of the tool is shown in the accompanying cut. The body C is hollow and contains a plunger for seating primers and a spring for returning parts to initial position. To the rear end of this body are fulcrummed levers A A which engage said plunger. To the rear end of this plunger is hinged the expeller B. The forward part of the body has a slot D for receiving head of shell for capping, and a slot E into which



Stevens Arms and Tool Co.

primer is dropped, coming to exact position to enter primer pocket.

To operate it the tool is held in the palm of hand with levers A A wide open; the thumb is pressed on the rear end of expelling plug B, lifting same so the shell is slid on to it freely, the head of shell passing over shoulder C. On removing thumb, the shell drops down so the head of shell falls behind shoulder C, which prevents shell shifting position when levers A A are closed, expelling old primer. The shell is then withdrawn and reversed with one motion, and head of shell dropped into slot D, a primer is then dropped into pocket E and levers again closed, seating the primer. This tool is very light, extremely powerful, and subject to very little wear. It is made in all sizes. The price, nickel plated, is $1.50.

This firm is also making three new models of guns for 1903. This gun is novel in its mechanism, embodying features that, it is claimed, will enter largely into fire arms of the future. The top snap is dispensed with, the trigger serves to open the gun as well as discharge it. When the hammer is down, pressure of the trigger pulls back the locking bolt, and the gun is opened; the hammer must be down to accomplish this. The cocking of the arm is independent. The solid locking bolt prevents the gun getting shaky, even with severe and long use. The hammer of this gun is so fitted in the frame that the working parts are thoroughly protected. The main spring and locking bolt spring are made of specially tempered coil spring wire, so arranged as to give a reliable, smooth, and easy working mechanism. They are specially designed smokeless powders. All parts are interchangeable.

The three models are No. 160, $8; No. 161, $9 and No. 170, $10. Further in-

CANADA'S IMPORTS OF SPORTING GOODS.

By Mac

IF bicycles and bicycle parts be excepted —and these really belong to-day to a man's business life rather than to his sporting life—the imports of sporting goods in Canada have shown a remarkable development in the past six years, in spite of the undoubted increase in the domestic production of nearly all lines.

The most notable increase has been in guns, rifles, pistols, etc., the imports of which in 1897 were $93,015 and in 1902, $257,135. Of the latter figures $157,472 came from the United States, $54,940 from Belgium, and $25,519 from Great Britain.

Cartridges and other ammunition have, too, been imported in rapidly increasing volume. In 1897 Canada bought but $64,054 in outside markets; in 1902 the purchases reached $199,351, the United States sending $112,473 and Great Britain, $85,841.

Another interesting development has been in the importation of dolls and toys of all kinds. Of these Canada in 1897 bought $155,552, of which $87,451 came from Germany and $47,438 from the United States. In 1902 the imports of this line had reached $275,242, $160,828 coming from Germany and $81,373 from the United States. Great Britain also sent us $15,180 and France, $11,775.

In the foreign purchases of fishing tackle, too, there have been a big expansion. The statistics for 1897 are not clear in the Government returns, but it will be noticed that the growth from 1898 to 1900 was only about $5,000, whereas in the last two years it has been nearly $25,000. Of the imports, during 1902 Great Britain sent us $23,397 and the United States, $18,146.

The widespread increase in the interest in photography is illustrated by the imports of dry plates, which have risen in six years from $16,579 to $44,808, the bulk of it coming from the United States.

Evidently, too, card playing is not on the decrease, for the imports have grown from $17,698 to $39,099. Of this, $3,298 came from Great Britain; $35,771 from the United States.

In fact, an examination of the figures of all the goods referred to, as well as to less important lines, shows that there has been a steady increase of imports of sporting goods of all kinds into Canada during the past year.

SPORTING GOODS DISPLAY RACK.

How to display sporting goods to advantage is a consideration worthy of attention. The accompanying design from Iron Age shows a rack used in a Connecticut sporting goods house. It is so simply constructed that any hardwareman could readily build one. It will be noticed that in addition to the lines carried by the Canadian hardwareman, such lines as boots, sweaters, stockings, and even padded knickers are sold by this dealer. But this could not be recommended, as these lines legitimately belong to the men's furnisher. Flags, however, are sold by hardware dealers all over the Dominion. A valuable addition to such a stand as the one shown would be a number of boxes nearby in which to carry baseball bats, lacrosse sticks, etc. The smaller goods, such as fishing tackle, balls, base ball gloves, football pads, etc., can best be shown in a glass showcase or on a table where they can be readily examined by an intending purchaser.

Window displays should be made from time to time. In preparing these it is

best to devote the window to one branch —goods for home exercise, fishing tackle, guns and ammunition, outdoor athletic goods, flags, hammocks, etc. Once in a while it would be worth while to crowd as wide a range as possible attractively in the window so as to leave the impression that a complete stock of sporting goods is handled—for after all, there is nothing brings a customer like the assurance that he will have such a good stock to choose from that he will get what he wants at a reasonable price.

THE FUTURE OF THE BICYCLE.

A Steady, Growing Sale in Canada Assured.

All the sales of bicycles in Canada to show an increasing tendency for the season of 1903 and succeeding seasons? This is a question that is being much discussed in a number of papers throughout Canada at the present time. To anyone, however, who is fully in touch with all the influences that are tending to direct the course of the bicycle business there can be but one answer to this question. It is that the bicycle has won for itself an enduring place, and that its sales, not only in Canada, but the world over, will show an upward tendency during the coming years. Signs of this are apparent both at home and abroad.

ENGLAND.

In England the bicycle has returned to popular favor to an extent hardly appreciated by us in Canada. Visitors who were in England last year at the Coronation tell us that over every highway in England were to be seen daily large numbers of cyclists, both men and women, touring from place to place. The Royal family has renewed its interest in the bicycle, and consequently society is taking it up once more. The result was that last year there was a sale of nearly 500,000 bicycles in Great Britain, and all the companies engaged in bicycle business had a most profitable showing to present to their shareholders.

EUROPE.

On the continent of Europe similar conditions prevail. In France popular interest in cycling has been revived, and with it, renewed zeal in cycle racing events. It is estimated that there were in the neighborhood of 400,000 new bicycles sold in France alone last year.

AUSTRALIA.

Similar conditions prevail in Australia, where interest in cycling affairs is at its height. Advices to hand from that country at the present time tell of race meets in Sydney, Melbourne, Brisbane, Auckland, and other Australian points, attended by from 10,000 to 20,000 people. Purses of £100 to £500 are common, and the prize for the mile championship was £1,000 sterling.

AMERICA.

It is estimated that there are in use in the United States over 2,000,000 bicycles, and all the manufacturers are preparing for an increased sale of their lines in 1903 season. One feature of this revival is the demand for a higher-class bicycle. In the United States during the past few years the demand has been ever for a cheaper bicycle, but this year, prices are uniformly higher, and manufacturers are putting forth their efforts to turn out a higher grade of bicycles, so that competition will be on merits, not on price.

That Canada will have her full share of the increase in sales is assured, and already reports from all sources indicate an increased demand for better bicycles than has been the case for some years past.

REASONS.

There are sound reasons for this revival. The bicycle has during the past few years been improved to an extent hardly appreciated by those who gave up the bicycle a few years ago and have not since taken it up. Every feature of bicycle construction has been improved upon. The parts are now standardized,

T. A. Russell.

Managing Director of The Canada Cycle and Motor Co.

and experience has shown just what construction will give the maximum of strength and reliability with the minimum of weight. Tires have been improved, so that punctures and delays of this sort are a thing of the past. The coaster brake has been introduced, enabling the rider to coast down inclines with complete safety, as he always has the bicycle under complete control, and so permits the rider to rest from the strain of continuous pedalling. The motto of the coaster brake is "Ride 50 miles, pedal 35."

In addition, the invention of the hygienic cushion-frame, which, by means of an attractive device, takes up the jar and vibration formerly connected with wheeling, has increased the rider's comfort to a marked extent. It prevents jolt and vibration, and in so doing, not only adds comfort to the rider, but greatly prolongs the life of the wheel.

"Canadian Hardware and Metal" deserves thanks for the effort it has been making to interest the hardware trade to a more marked extent in the bicycle, as the business now is on a stable foundation. There is nothing in the bicycle for the hardware dealer, or any other dealer, who is not prepared to work, but for the man who is prepared to go after business, there is no line at the present time which offers speedier or better profits than the bicycle, and with it, proper lines of bicycle accessories.

T. A. Russell.

SPRING BICYCLE TRADE.

The early opening of spring, as indicated by the few fine days experienced last week, has livened up business at this generally dull season of the year, and hardwaremen who are carrying a line of bicycle hardware are to-day reaping a harvest.

Every indication points to a healthy revival of the bicycle, and many dealers and repairmen are to-day taxed to their utmost, working night and day to fill the demand.

This is a line that brightens up a store and returns good margins, and hardwaremen throughout the country have not been slow to grasp the fact.

The orders already received this year by the manufacturers are far in excess of any like period covering the past five years.

Should the fine weather continue we foretell a busy season and a return to the good old wheeling days.

SPORTING GOODS CATALOGUES.

FISHING TACKLE.

Wm. Croft & Sons, Toronto, have ready for the trade their catalogue, which embraces over 90 pages of fishing tackle information. This firm have studied the Canadian fishing trade thoroughly and are in a position to-day to supply hooks, lines, flies, artificial insects, pouches, floats, baskets, buckets, traps, bags, nets, wading trousers, tackle boxes, spears, compasses, rods, reels; in fact, everything essential to successful fishing, whether it be in the trout streams of the Rockies, Northern Quebec or Ontario, the bass, perch and pickerel lakes, or the muscalonge lakes or rivers of lower Ontario, the salmon streams of British Columbia or New Brunswick, or other salt-water fish at the coast rivers. This catalogue is an education to anyone not well versed in fishing tackle requirements. It will be sent gratis to any readers of "Hardware and Metal."

CHILDREN'S WHEEL GOODS.

In the spring catalogue which Nerlich & Co., Toronto, have just issued, considerable attention has been devoted to children's wheel goods, velocipedes, tricycles, wagons and carts. This firm are ready to send a copy of their catalogue to any firm desiring these goods.

MACHINERY

MACHINERY AS A HARDWARE LINE.

A Retailer's Experience.

By D. O. M.

"HOW'S business?" asked Mr. White, hardware dealer in L——, of Mr. Brown, who carried on a similar business in a neighboring town, whom he met in Toronto in January last year.

"Can't complain," was the reply. "We had a fine Christmas, but are quiet, now, of course. How is it with you?"

"We are almost as busy as we were before Christmas. One of the clerks and myself have been busy with outside work, and the others have had enough to keep them going in the store."

"Outside work! What do you mean?"

"Chasing up business outside the store. Three years ago, one afternoon in February, I was wondering what to do next, when a traveller for a windmill maker came in, and after much argument persuaded me to accept an agency for his house. He insisted that I push the line, and promised that there was business to be had if I would try for it. I decided to try pushing it for a week, and during that time asked every customer who came into the store if he would buy a windmill. On the fourth day I sold one to a farmer, who installed it for watering his cattle. That sale led to several others, and as I had time to spare I took several trips into the country around L—— to look up sales of windmills. Success in this line made me want to try others."

"Did you make money on the business?"

"Yes, every time. The next line I took up was sewing machines. There is a sewing machine agent in L——, but he handles organs, pianos, etc., so he has little advantage over me in getting after the machine trade. In fact, I think I have the better of him, for I know as many of the people in and about the town as he does, and I advertise the machine and he does not."

"*Do you* call on prospective buyers?"

"If I hear of anyone who wants a machine I call or send my best clerk. I find this line pays me well. It in turn led to bicycles. I had always refused to touch bicycles, but decided to give them a trial. It went [illegible] a few months, but when repairs were wanted I had trouble galore. I had to start a repair shop or give up the bicycle business, but by this time I had learned that it payed to widen out, so I started the repair shop. This was the best move I had made in years. In the winter we sharpen skates and repair all kinds of machinery. In the summer we find that both bicycles and machinery need much attention. The repair shop has given us advantage in the skate trade, and we have taken agencies for half a dozen machine or tool makers."

"How do you sell machines?"

"I get every machinery catalogue I can, and study them thoroughly. If I see a machine I think any millman in the district should have, I secure the agency for some house handling it; then I go right to him and try to sell it from the catalogue, which is nearly always well illustrated. Sometimes the customer insists on seeing before buying, but I get the credit of and commission for the sale. I am in the city to-day to complete a sale that will pay me well."

"But does not this outside work interfere with your regular trade? I have thought of taking such agencies more than once, but have been afraid to take my attention away from my regular business."

"Candidly, so was I at first. But I find that I sell far more over the counter than I ever would have had I not taken agencies of side lines which brought new customers into my store. For instance, just last fall I drove into the country six miles to see a farmer who thought of erecting a silo. I had an agency for a cement firm which builds silos. The cement silo is not as cheap as some, and my man needed lots of argument. But at last I convinced him that the stronger cement silo would pay him in the end. I got commission on the job and became acquainted with the man, and though he was never in my store before he is now a regular customer of mine. I have had to put two additional clerks in my store, besides getting practical men for my repair shop. I find it pays to get good clerks and trained mechanics."

"If I go to L—— will you give me some pointers on your methods?"

"Sure. But don't come before next Monday. I will be engaged until then."

On Monday the two retailers, who, by the way, had been clerks together in a Hamilton hardware store 16 years before, compared notes. One had centred his business in regular hardware, and had done well; the other had widened his field to include everything of a hardware or metal nature, and had done better.

"I have made a list of the goods you sell that I have never touched," said the former, after their talk was concluded. "Machinery and tools are the most important, though I sell some tools. I tried bicycles, but as I never started a repair shop, they did not pay me as I thought they should, so I dropped them. Sewing machines, pumps, windmills, I have never tried to sell, but I will write to these houses you suggest. How did you hear of them?"

"Some from goods coming into the repair shop, some from travellers, some through 'Hardware and Metal.'"

"Well, old man, I am going to try your plan. I'll tell you how I come out some day."

AN ACCIDENTAL DISCOVERY.

With electric motors all round us to-day it is hard to credit the fact that the discovery that a dynamo would act as a motor when current was passed through it was accidently made by an attendant at the Vienna Electrical Exhibition of 1873, says Ironmonger. Thinking two loose cables belonged to an adjacent gramme dynamo, he inserted the ends into the terminals, and the machine straightway began to revolve. The other ends of the cables happened to be connected to another machine, which was working at the time.

SMALL ENGINES FOR JAPAN.

Makers of small steam, oil and gas engines will find that Japan is one of their best markets, for the process of converting and amalgamating its numerous factories into works with motive power goes on apace, says The British Trade Journal. The total number of factories with power, therefore, shows a slight decrease but the aggregate of horse power employed has risen from 11,031 in 1894 to 95,392 two years ago. There are still almost 5,000 factories without motive power chiefly devoted to weaving silk [illegible] cement making, printing and cotton and silk spinning. Factories with motive power comprise [illegible] cotton and silk spinning, weaving, machine shops, cement works, printing, and paper mills.

MAKING CASTINGS OF SHEET STEEL.

A COUNTRY like Canada that offers so much in the way of continued industrial progress and expansion is bound to attract new industries, to have established within its bounds factories and workshops which carry out the latest advancement in industrial or commercial science.

Within the past few months a proof of this has been furnished in the establishment in Toronto of The Empire Machine and Metal Stamping Co., under the presidency of Henry Stanyon, an expert engineer and draughtsman from the United States.

This firm is making a specialty of metal stamping. They have a plant and the necessary knowledge of process to enable them to work all kinds of sheet steel, brass, aluminum and copper to any shape. They offer to duplicate any casting sent them in sheet steel, and to make their product lighter, stronger and cheaper than cast iron. Last week they sent out the following announcement:

"Are you manufacturing anything requiring the use of parts made of sheet iron, steel, brass, copper, zinc or aluminum? By the use of dies in power presses we cut from sheet metal of any kind pieces of almost any shape. In cutting 10,000 pieces with the same dies there will not be one that will vary appreciably from any other one. If holes are needed in these pieces, we punch them of any size or shape required, and uniformly the holes in one piece will exactly match the holes in each of the other pieces. Round, square, triangular, oblong, oval, slot or irregular shapes are all the same to us—anything up to ¼ in. in thickness, or, if small, up to ½ in. thickness.

"We take one of those die-cut blanks, and, by the use of other dies in presses, bend it, crimp it, emboss it, corrugate it, make it into a cylinder or tube, a thimble or a dish, give it curves or angles, stamp it with letters or figures, and, in short, give it almost any form or shape that may be required. We also cut, form and shape from rods, bars and wire.

"Soft steel is fast taking the place of malleable iron in many thousands of articles, and it is in every way better. As it is stronger and more uniformly of good quality, goods may be lighter, while they will be neater, look better, have a smoother finish and make a better fit. We make a specialty of doing this class of work for others doing their own stamping. New inventions are in our line."

Several castings, or rather stampings, were shown to a representative of HARDWARE AND METAL the other day. The steel had been drawn and stamped with the same precision and ease that stamped tinware now presents. The finish and appearance of the product was exceedingly attractive. In one case a cap to fit tight over a wooden hub and the projecting nut was stamped in two pieces, which would make a perfectly air-tight cap, a remarkably interesting production from sheet steel.

The firm is also manufacturing several specialties for use on the Canadian market, two of them being advertised this week.

Already several of the foremost manufacturing houses of Toronto have sent large orders to the company. They offer to furnish further particulars regarding their business, or to send quotations to readers of HARDWARE AND METAL.

"THE JINGLE OF THE TOOLS."

Some rave about Beethoven, Sousa, Sullivan and Lizst,
And dream about the chorus and the band,
While others get hysterics if a single night is missed
When Godfrey has his baton in his hand.
But there's music that is sweeter, and I hear it in my sleep,
It has neither tempo, measure, clefs nor rules;
But it rushes through the world with an unresisted sweep—
'Tis the music in the jingle of the tools.

I can see the anvils dancing at the merry notes they sing,
When the hammer and the tongs begin to play,
And the chisels gather 'round them like a joyous elfin ring,
While the s'edge pounds out a lively roundelay.
'Tis their jumping and their clashing make the wheels of [commerce fly,
And gladden every heart except a fool's.
The nations all would perish, and the earth itself would die,
Without the cheery jingle of the tools.

The vise, with peals of laughter, may be seen to spread his [jaws,
When everything goes rattle, dash and bang;
The bellows in his exercise sometimes will take a pause,
And on the sweet reverberations hang.
When they have heated up the metal and it comes out shining [white,
The folks will stand around until it cools,
For young and old can listen with unqualified delight
To the music in the jingle of the tools.

Where you see the smoky chimneys, with their summits in the [sky;
Where you hear the screaming whistles by the score;
Where they build the mighty mansions up to fourteen stories [high,
And the street car flies like lightning by your door;
Where the workman owns his dwelling, though his city be in [debt,
For the building up its colleges and schools—
If you have an idle dollar you can put it down and bet
It's there you'll hear the jingle of the tools.

There may be softer music for the man without an aim,
Except the chase of pleasure for a while,
But he soon gets sick and weary, and all music seems the [same—
It rarely starts a tear drop or a smile.
But the merry, merry tinkle of the iron and the steel
He neither praises, blames nor ridicules,
For his heart is far too narrow and his spirit cannot feel
The sweetness in the jingle of the tools.

MACHINERY AND ELECTRICAL NOTES.

The Canada General Electric Co., Limited, are having plans prepared for large extensions of their plant at Peterboro', Ont., which will greatly increase their capacity for the production of all electrical supplies.

The Canadian Shipbuilding Co., of Toronto, have definitely decided to go on with the erection of their works in Berks Township, near Welland, Ont. A. Angstrom, the manager of the company, is busy with plans, etc., now. The site of the works will be at Bridgeburg, Ont.

The Canada Foundry Co., Limited, Toronto, are making extensions to their boiler shop and structural steel works that will about treble the structural steel capacity of the works. Further extensions will be made during the summer to other departments of the works.

The Kerr Engine Co., valve manufacturers, Walkerville, Ont., are experiencing the busiest season they have ever had. In addition to large orders for waterworks systems in Winnipeg, Vancouver and other points, they are doing an excellent business with South Africa.

The gray iron foundry at the new Deering works, Hamilton, was started on Friday last, the first heat being run off from the cupola in the afternoon. The iron melted was Hamilton pig, and works very satisfactorily in the furnace. The molding done now is not for manufacturing purposes, only for furnishings required around their own buildings.

Within the next few weeks The Ottawa Steel Casting Co., formerly The Baldwin Iron and Steel Works, Ottawa, will commence the erection of a new $25,000 addition to their already extensive plant at the Chaudiere. The plans for the new building will shortly be prepared and will provide for an addition covering all the property owned by the company adjoining their present premises. The only difficulty so far has been that of securing a sufficient quantity of the proper kind of pig iron.

WINDSOR, ONT.

WINNIPEG'S PIONEER IRON WORKS.

By E. C. H.

THE history of the iron manufacturing trade in the West dates back some 25 years, and it is interesting to note that the pioneer company, after many vicissitudes, is now at the head of the trade and is at the present time preparing plans for a foundry that will more than double its capacity.

In 1877 McKechnie & Miller started "The Vulcan Iron Works." It was a very modest beginning, and only the simplest and easiest branches of the iron worker's trade were attempted. After a few years these works were bought out by F. H. Brydges & Company, and by them transformed into a joint stock company. This company had many ups and downs. The long distances from raw material, the cost of labor, the depression that followed the land boom of 1882, all these were hard on the infant industry, which, nevertheless, made a gallant fight for its life.

About 1897, some 20 years after its beginning, the Company went into liquidation, and then the founder, Mr. John McKechnie, together with E. G. Barrett, came forward and purchased it. Mr. McKechnie had never lost confidence in the ultimate result of this industry in the West, and his trust has not been misplaced. With the growth of the city and country, and more especially the growth of elevators and mills, came a greatly increased demand for the class of goods manufactured. The growth of the business within the last five years has been wonderful and, as just stated, they have during the past year purchased a large piece of ground in their immediate vicinity, and are now preparing plans for an enormous new foundry. "Vulcan Iron Company," as the business is now called, is known from Winnipeg to the Pacific, or, more properly speaking, from Fort William to the Pacific, as manufacturers of boilers, engines, elevator and milling machinery, iron and brass castings, architectural and bridge material, and plumbers' and steamfitting supplies.

The works are admirably situated on Point Douglass avenue, the street immediately to the north of and parallel with the Canadian Pacific Railway main tracks between Main street and the Red River. Here the various buildings are grouped about a large yard, and the tall chimney is one of the first objects that catches the eye coming into the city by the Great Northern from the south, or the C.P.R. from the east.

Your correspondent paid the works a visit the other day and was most courteously conducted over every part of them. The first building visited was the machine shop. This is a two-storey solid brick structure, 50 x 120 ft. The offices are situated on the second floor front, and the remainder is given over to the machines, a gallery running round two sides of it. From this gallery it was fascinating to look down and watch the great automatic planing machine cutting and planing steel rails as if they were bars of soap. The largest steel planing machine, west of Toronto, was being used on an order for switch rail for the Canadian Northern Railway company.

A more beautiful piece of machinery it would be difficult to find. Not far from this was a machine grooving and bevelling elevator wheels to make the centre elevation that holds the belt in place. Then there were the great spring machines, and perhaps the most interesting of all, a machine for corrugating flour, or indeed, any kind of mill rolls. The Ogilvie Milling Company have their own machine for this purpose, but smaller mills all over the country send in their rolls to Vulcan Iron Company. The rolls are corrugated in a slightly spiral direction, and the tiny plow-like knives do their work in absolute silence. In a very few moments more than half the circumference of the roll had been covered. A very different operation to the old one of "dressing the mill stones." Near this machine was a very large one for putting the threads on screws. All over the building here and there were machines of all kinds necessary to a complete and up-to-date machine shop.

From the machine shop a visit was paid to the boiler and engine rooms. These occupy a building all to themselves in the centre of the yard. In this building are installed two 7 h.p. boilers and one 90 h.p. Goldie & McCulloch engine. Firing is done with the native coal from the Souris district, and from this building underground ducts carry the hot air to all the various buildings. In this way each set of workers has a constant circulation of warm, fresh air in their building. A very ingenious automatic damper regulator is installed in the engine room. This regulator may be set to 90, 100 or 110 lbs. pressure, just whatever is required, and it will open and shut the dampers of the boilers automatically, and so as to produce that pressure and no other. From the boiler house the next visit was to the pattern shop. All the patterns required for the work are prepared here. In this building is rather

Main Street, Winnipeg.

a quaint relic of the past. In the old days people were always devising ways and means to supply the lack of natural fuel on the prairie, and straw burning stoves were forever being patented. In the centre of the pattern shop was one of these gigantic stoves: at the back is still to be seen the large round opening for the pipe which was to extend outside of the house and through which the straw was to be fed. This opening has been filled up and now the giant, from which the ambitious patentee hoped to reap a fortune, is engaged in the menial task of melting glue.

One of the most interesting places was the building devoted to moulding. Here the great heaps of fine sand were being dexterously manipulated. The mould for a huge elevator [illegible] being prepared at the [illegible] and numerous smaller models all [illegible] building. It

was delightfully suggestive of making mud pies, and your correspondent longed to take a hand at the game. This room, between the hours of five and six in the evening is a weird sight, for then the molten metal is being carried from the cupola room to the many moulds prepared during the day. The reflection from the metal cast strong lights and shadows over the faces of the workers as they moved swiftly, silently, but surely to and fro. From the moulding room it is but a step to the boiler manufacturing room, and here huge three-quarter inch steel plates are being rolled up like shavings to make the boilers of a great elevator. In one corner is a machine for punching holes for the great rivets. This machine was made on the premises and is of enormous strength. In the few moments we watched it, it made hundreds of holes in a three-quarter-inch plate of steel.

The last department visited was the foundry. Here some seven or eight forges were in full blast, and the interior was one that would have delighted Rembrandt. The men in their long leather aprons moving swiftly or laying the red-hot iron on the forges, while the air fairly quivered with sparks. In this building is a machine for heading bolts and similar work that cost $5,000. This machine is delightful to watch. Quite close to it is the furnace in which the bars are heated to a white heat. The operator stands in front of his machine, catches up a bar in a pair of long nippers, pops it into the machine, down comes the die, and the finished bolt is tossed aside to make way for another. By hand, this process would take a mechanic and his helper nearly four minutes to head a bolt, while with this machine at least five bolts per minute were turned out.

At the present time the company are employing 100 men, and they have orders ahead that will carry them far into the summer months. Their heaviest business is in railway, elevator and mill supplies. A large business is also done in small castings and iron repair work of all kinds. Their new foundry, which will be just about in the rear of their present works, will be 246 ft. long.

Mr. John McKechnie, the head of the firm, is a typical Scotchman; shrewd, kindly, intensely Scotch, but intensely loyal to the great West. He has always taken considerable interest in public affairs, has served for years on the school board, and is a great and mighty curler, one of the props and pillars of St. Andrew's Society, and, in fact a good all round citizen. In speaking to the men in the various departments of the iron works, there was a noticeable number that betrayed their origin by the broadness of their R's. A number of the helpers were Icelanders, with a mingling of Swedes.

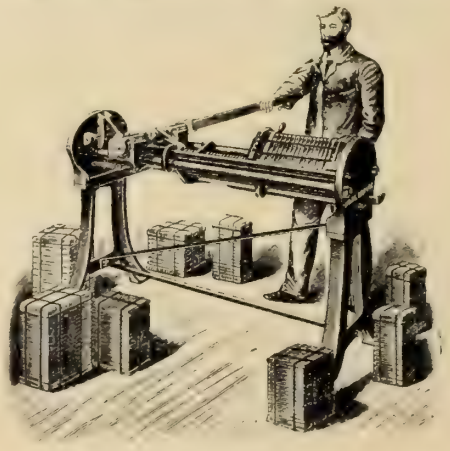
As the foregoing is an account of the oldest iron-works in the West, it will not be out of place to conclude with a word as to the newest, "The Manitoba Iron Works Company, Limited," which at the present time is advertising for tenders for the erection of buildings on the corner of Dorothy and Logan streets, just one mile from the heart of the city.

The space acquired is over 260 ft. in length, and will be entirely covered by the buildings. There is to be a pattern shop, 40 x 40; forging shop, 40 x 40; boiler room, 25 x 21; foundry, 50 x 80; boiler manufacturing shop, 60 x 60; machine-shop, 60 x 125, and numerous other buildings. The track privileges are such that raw material will be delivered direct from the cars to whatever department it is to be used in. The erection of the buildings will be pushed forward as rapidly as possible, and when complete, a gang of 50 men will be put on to start with. A 75-h.p. boiler and an engine of equal capacity will be installed at the start, but it is the intention of the company to use electric power as soon as the new company bring it in from the Winnipeg river. Mr. T. R. Deacon, C.E., is manager for the company.

The Winnipeg Iron Works Company is also doing a good and increasing business, but for the purpose of contrast only, the oldest and the newest iron works have been given prominence in this sketch.

AN UP-TO-DATE BUNDLING MACHINE.

One of the simplest yet most ingenious machines yet produced is a new bundling press for packing and tieing up books.



Krause Bundling Press.

manuscripts, etc., simultaneously. This machine, which is manufactured by Karl Krause, Leipzig, Germany, has already had a wide sale throughout Germany and is expected to "catch on" readily on this side of the Atlantic. The machine is entirely of iron, solidly built. The workman in charge controls the pressure by means of a lever. The action of the gearing on this press is so easy that one man without exertion can effect the highest admissible pressure. The platens are provided with grooves to permit the stringing of books, etc., while pressing them.

HOW MALLEABLE CAST IRON IS MADE.

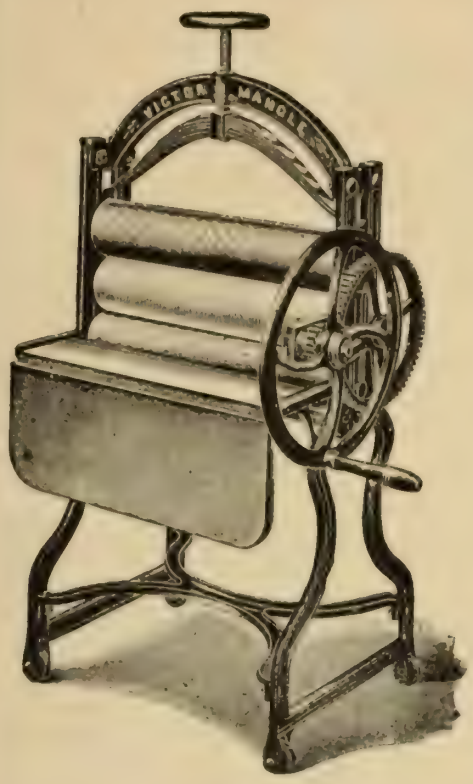
THE remarkable expansion in the use of malleable castings has aroused considerable comment. Yet, there is little wonder at this when it is considered that the malleable casting is particularly adapted to the requirements of four great classes of work—agricultural implements, railway supplies, carriage and harness castings and pipe fittings, says Hardware Reporter. Were it not for the fact that malleable cast iron is not adapted to the heavier sections it would be a sharp competitor to the gray casting industry.

In its manufacture the special make of the iron called "malleable Bessemer" or "malleable coke iron," is the principal material used. The charcoal irons, though unequalled for value, are confined to the regions where they can compete with the cheaper coke irons. The silicon should be .75 to 1.50 per cent., phosphorus under .200 per cent., while sulphur should be .04 per cent., if possible. A pig iron, higher in sulphur, in reality an "off Bessemer," while meeting the silicon specifications perfectly, should not be used except in limited quantity, and then carefully watched.

With the pig iron, hard sprues (unannealed scrap) steel and also malleable scrap is charged. The latter two materials are very good to add to the mixture, as they raise the strength of the casting very considerably. Care must be taken not to add too much, as this reduces the carbon to a point when fluidity and life in the melted metal is sacrificed.

"Malleable" is produced in the cupola, the reverberatory furnace, and the open hearth. The first process, under ordinary conditions, is the cheapest. The iron made is, however, by no means the best. Test bars made of cupola iron seldom run above 40,000 lb. per square inch, while with the furnace iron there is no difficulty in getting a few thousand pounds more.

The most serious objection to cupola iron is its poor behavior under the bending test, the deflection being very slight. In the reverberatory and in the open hearth, the fuel is not in contact with the metal and the result is much more satisfactory. The metal in these furnaces may either be caught in the ordinary hand ladles, or it is tapped into a large crane ladle and conveyed to the distributing point, and there emptied into hand ladles as required. When tapped into hand ladles, the time taken is a serious



THE VICTOR MANGLE

heat, for the beginning and the end of the heat will be two different things. The latter iron, especially, will be inferior, as it was subject to the oxidizing effects of the flame much longer than the first part. As a rule, this difficulty is somewhat remedied by pouring the light work first, the heavier pieces coming later, when the silicon has been lowered too much for good, light castings. With the crane ladle pour, the molder has much less space to travel over, and this will doubtless be the coming method.

After the castings have been tumbled they go to the annealing room, where they are packed in mill cinder or iron ore in cast iron boxes. These are carefully luted up, and heated up in suitably constructed ovens for the space of five or six days. It usually takes 36 to 48 hours to get the oven up to heat, the temperature ranging from 1,600 to 1,800 deg. Faht. in the oven, the boxes having a somewhat lower temperature at the coldest point. When the fire is extinguished, the dampers are closed tight, all air excluded, and the oven allowed to cool very gradually, often but 400 deg. Fahr. the first day. After the castings come from the anneal, they are again tumbled to remove the burned scale, and they are chipped and ground for shipment. The hard casting should have its carbon practically all in the combined state, while the annealing process should convert this to the so-called temper, or annealing carbon. A well annealed casting should not have much over .06 to .12 per cent. combined carbon remaining in it. Under-annealed castings can be readily detected by their brittleness, but it takes much experience to be sure that a casting is over annealed. There is a material difference between the strength of an over-annealed casting and a normal one.

Winnipeg Warehouse of Cockshutt Plow Co.

THE COCKSHUTT PLOW COMPANY.

The rapid development of the Canadian Northwest has aroused the energies of business houses in older parts of the Dominion who sell in the Northwest. Many of these have responded to the increased needs of the West by largely increasing the warehouse space at their central delivery point for that territory. Among the large warehouses, the construction of which was begun in 1902 and have been completed during the winter of 1902-1903, there is no finer one than that of The Cockshutt Plow Company on the corner of Princess street and Pacific Ave., Winnipeg. The dimensions of the building have been mentioned before and the accompanying cut gives an excellent idea of the exterior. The ground floor is devoted to show rooms and shipping rooms, the latter giving on the transfer track in the rear. The entire front of the second storey is devoted to offices. Here all that delicately-tinted ceilings, hardwood floors, abundance of natural and artificial light and elegant furniture can do to make the employes comfortable has been done. The rear portion of this floor and the remaining portion of the building are devoted to stock and mounting rooms. Electric elevators run throughout the building.

SOME SCIENTIFIC SUGGESTIONS.

To Melt Iron in Small Quantities.—Three or four pounds of cast iron can be melted in a black lead crucible in a forge fire by building up loose brick furnace around the tuyere, with about three inches clearance around the crucible.

For Soldering Electric Wires.—What do you consider the best flux for soldering electric wires, outside and inside? A. Rosin is the best flux for soldering copper or iron. Next to that, and much easier of use, is some one of the soldering pastes which can be had from dealers in electric light supplies.

Good Welding Compound. — There is nothing better than borax and good management for welding steel of low grades or for welding tool steel to iron. Mixtures of 10 per cent. sal-ammoniac pulverized with the borax, also mixtures of iron filings with the above, have been recommended, and special compounds advertised. For iron to iron alone there is nothing better than clean white sand, and with difficult pieces a mixture of sand and borax.

AN AMUSING INCIDENT.

A machinist belonging to a prominent paint and varnish company in Montreal met with a strange experience the other day. Not having time to use a "complexion improver" before leaving the works, he boarded a Notre Dame street car on his way home. A buxom French-Canadian woman sat opposite to him with a chubby baby on her lap, who, as soon as he noticed the dark face of the machinist called out, "Daddy, Daddy," much to the amusement of the other passengers.

Madame, to relieve the embarrassment, said, "Pardon, M'sieu. My husband's a ramoneur (chimney sweep) in St. Henri, and when petite Alphonse see a black-looking man she tink he's his farder!" (Roars of laughter).

CANADIAN LAUNCHES FOR VENICE.

THERE is, it appears, a good opening for a company to place electric launches on the canals at Venice. Such a proposal, it is officially reported, would not be viewed with disfavor by the town council, inasmuch as the steamers running on the Grand Canal are alleged to damage, by a gradual process of erosion, the foundations of the historical palaces on the canal. Moreover the continuous smoke of their engines is stated to injure the picture galleries. When the Cellina electrical works are in operation the motive power will be easily obtained and stored for distribution to the launches. These should be of various dimensions, of a narrow type, for passing through the small canals intersecting the town, and of a larger type for running on the Grand Canal and the Venetian lagoon. The launches would in this way be able to perform an omnibus service to all parts of the town, some of which are now entirely cut off. An extraordinary development might also be given to the conveyance of passengers to the mainland and the neighboring islands, in a quick, frequent, comfortable and cheap way. The speed of the small steamers, since the fall of the Campanile, has been greatly reduced by order of the authorities, not to the advantage of the public service.—British Trade Journal.

As there are no better launches made than those of Canadian manufacture, this opening might be taken advantage of by the makers here, unless they already have as many orders as they can handle—the case in one instance, at least.

The Best Quality of Crucible Tool Steel is used for the Bitts

Each tool is Tempered by Hand, and carefully inspected in every process of manufacture.

All are plainly stamped "A. A. & T. Co., Patented April 17, 1900," which is in itself a guarantee of superior quality and shows that we WARRANT them to be perfect in workmanship and material

Can be furnished under the "AMERICANAX" brand Blue Finish, or the "RED RIDGE" Red Finish.

The popular policy we are pursuing as to price, makes it a seller and a profitable line to stock.

Trade Marks and Laws Governing Same.

By EGERTON R. CASE, Patent Solicitor, Toronto.

IT is of much importance to a manufacturer, when contemplating adopting a particular mark or device for his business, to be sure that same is acceptable for registration as a valid trade-mark. If he does not take the precaution to be sure on this point, he will find that he will have been putting money into an investment from which others may reap the benefit. A descriptive name alone may not be a valid trade-mark. But a descriptive name, when combined with a picture, is admissible, and was held in Frost v. Rindskopf, 42 F. R. 408.

Materials are not the subject of appropriation as a trade-mark. There is no valid trade-mark in a piece of tin as a tag for tabacco, regardless of its color, shape or description, as this is one of the common metals in use by the public for a large variety of purposes.

An inventor may give the product of his genius a distinctive appellation of infinitely greater value to him than a patent for the machine or discovery. This is a most important matter and one to which manufacturers ought to pay the most careful attention. The object is to select, or design, a designation peculiarly applicable to the thing of which a monopoly is desired. For example: About 1814, one Logier obtained a British patent for an instrument for guiding the hands of learners on the pianoforte. He compounded two Greek words signifying "to form the hand," and called his machine the "Chiroplast." He acquired great reputation and made considerable profit, from the favorable reception of the instrument. If he had known that the new word was a valid trade-mark his interests would not have been affected by the expiration of his patent. The trade-mark would virtually have given him a monopoly as long as the public called for the "Chiroplast." This case seems to teach that as the originator of the name had in effect abandoned it to the public, he could not, subsequently, by any formal acts, recover the right to its exclusive use. From this it will be seen that it is quite often advisable for a manufacturer to protect his business interests both by trade-marks and patents. This name was refused registration on the ground that it had become the name of the article.

As the first adopter of a trade-mark does not acquire an exclusive right to its use, except in connection with the specific class to which he has applied it, it is not uncommon for the same trade-mark to be placed on articles of different classes by different owners. Thus, the trade-mark "Bismarck" may be used for cement, notwithstanding the fact that another had previously appropriated it for paper collars. The "Star" may be used for iron, shirts, lead pencils, or soap. In explanation of this I would say that the importance of specific mention of the class of merchandise to which a certain emblem is to be attached as a trade-mark, may be illustrated by the letters "I. X. L." For many years, Wostenholm, in England, has used the letters "I. X. L." upon cutlery. The exclusive right to the use of that term, had, at common law, become vested in that firm, so far as it was actually stamped upon certain articles. It could properly have been appropriated for marking all kinds of cutlery, fine and common, large and small. It was known all over the world that Wostenholm had manufactured steel fabrics thus stamped. An American firm applied for registration for that mark for a chopping axe. They had adopted the mark many years after it had acquired a world-wide reputation through Wostenholm. It was held that chopping axes were not included in the particular class of goods in which Wostenholm used the mark registration allowed. In 1872, Wostenholm registered the symbol "I. X. L." as a trade-mark for cutlery. Later on in the same year an American firm filed an application for a mark, newly adopted, of which the said symbol is the essential part, to be applied to scythes. As it was ascertained that Wostenholm did not make scythes, a certificate of registration was issued to this firm and consequently the mark was registered for the third time.

Propriety must be the standard in something intended to serve as a symbol of commerce. Care must be observed to avoid copying established hall-marks or emblems common to specific manufactures. For example: In articles of manufactured gold in Great Britain, an anchor shows that the gold wares were made at Birmingham; a dagger and three wheat sheaves, at Chester; "Hibernia," at Dublin; a castle and a lion, at Edinburgh; a castle with two wings, at Exeter, and a crown, at Sheffield.

A lack of truth debars a trade-mark from protection. The instant a trade-mark ceases to be truthful in spirit as well as in letter, it becomes an instrument of fraud and is not lawful.

In Ford v. Foster the court stated: "If a trade-mark contain a false representation, a representation calculated to mislead the public, a man cannot, by using that which is itself a fraud, obtain an exclusive right, or, indeed, any right at all. In the reign of Henry III. in consequence of the frauds which had been practised by the gold and silversmiths, it became necessary to prescribe some regulation for their trade, because the mixing of too much alloy in the composition of their wares tended to the melting down of the coin of the realm. In the reign of Edward I. it was ordained that the precious metals be assayed, and further, that the articles be marked with a "Leopard's head."

The doctrine of alternate forms has sometimes come up in practice. In Morrison v. Case it was held that the words "The Star Shirt," with the figure of a star, and the words and device "The Shirt," constituted a single trade-mark. In Weaver, ex parte, the registration of a trade-mark was allowed, consisting of the word symbol "Lion," or the pictorial representation of a lion, or both. Ever since then it has been a settled practice to register alternate forms when they constitute true alternatives. The reason given is that a trade-mark appeals in many cases to the ear as well as to the eye. This doctrine necessarily has some limitations. "They must be exact alternatives such that, on sight of the symbol, the word naturally occurs to the mind; such that, to express the symbol in language, no other word will occur; such that the written or spoken word unfailingly suggests to the mind the visible symbol." These remarks were made by Examiner Seely in a case in 1885.

THE "MANITOBA" GRAIN SCOOP.

The grain scoop, known as the "Manitoba," has been in use in that Province for some time, but is equally well adapted for the rapid handling of grain in any other part of Canada. The ordinary shovel is too slow for the immense crops that have now to be handled in this Dominion of ours, which is rapidly becoming the granary of the world. This being the case, a demand has arisen for something that would go quicker. The "Manitoba" holds half a bushel, and, with its two handles, makes easy the work of the farmer, the miller, the grain buyer, the storekeeper; in fact, everybody who has to do with the handling of grain.

We refer our readers to the advertisement and cut on page 46 of this issue of "Hardware and Metal," for further particulars of this new and useful implement for use in the grain trade.

Requisite for

House and Sign Painters, Varnishers, Kalsominers, Paper Hangers, Grainers, Artists, Decorators, Carriage and Coach Painters.

LARGEST IN THE WORLD

WE started making paint in 1866 in a small one story building. Today we are the largest paint and varnish makers in the world. We operate four large plants, in Cleveland, Chicago, Montreal, and Newark, and have offices and warehouses in eight other cities. Our traveling representatives cover every important paint field in the world.

We make, treat, and refine our linseed oil; make our varnishes, dryers, and japans; manufacture our dry colors; operate our own tin can and box factories; conduct our own printing plant; run our own machine shops for making the paint mills of our own design, and own a screw steamer for carrying our lumber down the Great Lakes.

Good quality and good advertising have built up our business. We have always believed that best goods well advertised sell best. Our success has proved we are right.

This good quality and good advertising will build up business for any dealer anywhere. We apply the same methods to the building up of our dealers' business as we do our own, and we know

THE SHERWIN-WILLIAMS PAINT AGENCY

will bring you the same success it has thousands of others throughout Canada and the United States. There's money in it.

Address our Montreal office for the "B-13" booklet which describes our goods and our methods in detail. Also worth having as an example of good printing.

PAINT, OIL AND BRUSH TRADES

GLASS AND ITS HISTORY.

By E. C. H.

THE manufacture of glass is of very ancient origin; in fact when, where and how the first process was discovered is a mystery that no research has yet brought to light, nor is it likely that the world will ever be much wiser in this regard than it is now. Glass ornaments, vases, drinking vessels, etc., were in existence centuries before it was put to use in the form of windows. The Egyptians, Phoenicians, Greeks and Romans all were proficient in the art during the height of their power and prosperity, while during the Middle Ages the greatest proficiency in the manufacture of glass ornaments and vessels was shown in Europe, especially in Venice. From the continent the industry was brought to England; and, in the 17th century, glass-making in England was distinguished by one of the most important innovations ever introduced since it was first discovered, namely, the use of a large proportion of oxide of lead in combination with potash. This makes the glass more brilliant than other kinds known, and was a great step towards the use of transparent glass for windows as known to-day. The Duke of Buckingham had a monopoly of the glass manufacturing business in England, and in the middle of the 17th century owned large works at Lambeth, which, besides turning out large vases of clear glass, made looking-glasses equal to any that had been produced on the continent. From this time much glass was used, and with the first introduction of it into houses as windows a great many factories have sprung up in the Old Country.

When sheet glass became a common article for houses, it gradually took its place among the hardware dealers' lines. Up till the early part of the 19th century windows were made of crown glass alone. This is now used for the very finest plate and window glass. It consists essentially of silicate of soda or potash, and lime without the admixture of lead, as in other glass. But since the introduction of sheet glass, the making of crown glass as an industry has greatly declined.

There are several formulas in the making of a batch of "metal" for window glass. A common composition is 100 parts of purified sand; 35 to 40 parts of chalk or limestone; 10 to 15 parts of sulphate of soda, and 50 to 70 parts of cullet (broken glass for remelting). There is usually added a very small proportion of white arsenic and peroxide of manganese for bleaching purposes.

Most of our common window glass comes from Belgium, though Great Britain and Germany are also large exporters to us. Austria, Germany and Belgium are, however, still the great makers of sheet glass of the world.

The process of manufacturing window glass has been altered and improved by many inventors, until the present furnaces and plant give as satisfactory results as could be desired, and are capable of supplying glass at prices within the reach of the poorest, and in quality to satisfy the taste of the richest. When the batch is taken from the furnace it is allowed to cool until it reaches a proper working consistency, when it is placed in the hollow of a wooden block; it is slowly turned round, while a stream of water is played on both the block and the "metal," thus keeping the one from burning and imparting a brilliancy to the surface of the other.

When sufficiently cool the blower takes it in hand, and while the batch is still revolving on the block, blows it to a required diameter. It is then heated again, and the blower swings it over his head, continuing to re-heat and swing it until the glass is blown out to the proper length, ranging usually from 45 to 50 in. This process transforms the glass into a cylinder, of the length mentioned and about 12 in. in diameter. An opening is made in the end, which is kept at a higher temperature than the rest of the cylinder; and gradually this end is blown out until the opening is equal in diameter to the body of the cylinder. The other end is broken off, by the action of successive heat and cold; and the cylinder then is in the form of a section of stove pipe. It then remains for it to be made into a sheet.

The cylinder is first slit by a diamond cutter, lengthwise on one side, and taken to the "flattening" kiln. Here it is laid on a smooth stone, the split side upwards, and, softened by the heat, gradually falls flat from its own weight. A flat square of from 45 by 36 in. is thus obtained.

Plate glass is put through a roller process; that, however, is not in the average hardware dealers' line.

STEADY ADVANCEMENT.

THE engraving on page 120 of a group of the warehouses, offices and factories of The Sherwin-Williams Company, the large paint and varnish makers, and the illustration on this page of the first factory occupied by the company at Cleveland, give graphically a story of remarkable advancement. They tell of a growth that is possible only of a company founded on sound principles and conducted on a liberal policy. They show what good goods, good methods and good advertising will accomplish.

It is a far cry from a small one-storey paint building to a continental system of factories and warehouses, but the history of The Sherwin-Williams Company

FIRST FACTORY OF THE SHERWIN-WILLIAMS CO. ON THE PRESENT SITE OF PLANT NO. 1, AT CLEVELAND.

has been one of steady, progressive, yearly growth. Each year the company's manufacturing facilities have been extended, its market widened, and its sales increased, until to-day the company is undoubtedly the largest concern of its kind in the world—and the growth is still rapid.

This advancement is not confined to any particular territory or country. In each one of the company's divisions big improvements are being made yearly. That Canadians demand and appreciate high quality paints and varnishes is shown by the extension and development in the company's facilities in the Dominion within the past year. An office and warehouse have been established at Winnipeg to care for the trade of the Northwest; the warehouse at Toronto has been enlarged, and the Montreal plant greatly extended. The company has been almost constantly building extensions to its Newark, Cleveland and Chicago plants during the past [illegible] improving its distributing facilities in the various divisions.

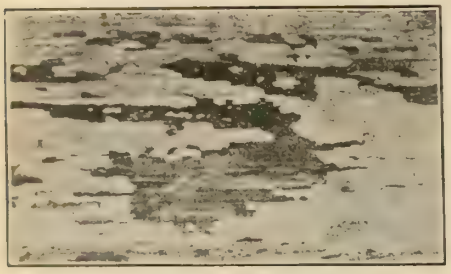
The foreign market is also being developed. The company established an ex-

left Hyperion some years ago, and its [illegible] of foreign representatives has developed a big business in the paint markets of the world.

The success of the company is a splendid illustration of the principle that the best goods sell best and of progressive intelligent advertising.

PAINT CRACKING AND FLAKING.

OFTEN prepared paints are blamed for poor results which are entirely due to the fault of the painter who applied them, or to the conditions under which they were employed. A case in point is described by Good Paint, the paper issued by John Lucas & Co. Several years ago an inexpensive summer cottage, built near the seashore, was painted during the wet season. About five months later, during the summer, the



Cracked and Flaked Paint Work.

agent from whom the paint was purchased sent us a section of the weatherboarding, requesting us to explain the cause of the cracking and flaking that had taken place in so short a time. The cut illustrating this article is a section of the board in question. You may have seen something like it, but seldom anything quite so bad. Our technical expert was sent to Toms River. The following are the facts learned:

The house in question had been erected the preceding fall. At the time of inspection it was standing in a pool of water; there was no cellar, and the house was built on brick piers; there were openings in the framework which gave free access to moisture and air between the laths and plaster on the inside and the weatherboarding on the outside. The house was built of Jersey cedar, on the surface of which there was considerable loose fuzz. Wood, at the time of inspection, was very dry and porous. In reply to inquiry, the painter who did the work stated that when he applied the paint the wood had become weatherworn; was dark and discolored; that he had used no thinners of any kind for priming or second coat. Close inspection of the work proved beyond any doubt that the paint had been applied thick, had not been well brushed out. This, taken with the fact that no additional oil was used in the first and second coats, would have the following results:

The very dry, fuzzy and porous nature of the wood would cause it to rapidly absorb the major part of the oil in the paint, leaving a heavy coat of pigment on the surface; a second heavy coat being applied would naturally have a tendency at first to frill, its elasticity would be impaired by the absorption of the vehicle. The construction of the framework admitted of moisture rising back of the weatherboards, and the hot summer sun striking the side of the house would draw the moisture through the porous wood until it came to the coating of paint, which, under such conditions, would readilly crack and flake off.

It is important to note that the house was allowed to stand exposed to the winter seaside storms and weather for over six months before applying any paint. To prevent such effects the following are the remedies:

1. The house must be constructed so that moisture cannot gain access to the back of the weatherboards.

2. Paint must be applied in accordance with the directions on labels, which read as follows:

"For new work: For priming coat add one to two pints of pure linseed oil to each gallon; when thoroughly dry, apply second coat, thinned in about the same proportion; for third coat use paint as found in can."

CIVILIZATION AND PAINT.

CIVILIZATION and paint go hand in hand. It has been well said that "an ounce of paint will prevent a pound of decay." A well-painted house bespeaks the intelligence of the owner or occupant of the domicile. "One touch of nature makes the whole world kin" and a few "dabs" of color will make the entire house bright. A liberal use of paint is a foe to all insects and germs, and the model institutions of the country are extensive buyers of all painting material. Good paints are apostles of sweetness and light, and in all new buildings, refreshing and harmonious colors are in vogue.

It is admitted by practical experts that the ready-mixed paint brands of the Canada Paint Company are standards of excellence at home and abroad. Ask any unbiased dealer, and he will tell you that many of the largest corporations specify in their requisitions, that the Canada Paint Company's brands are to be used. The liquid paint distribution of the Canada Paint Company has doubled within a very short time. "Facts are stubborn things."

In varnishes, the Canada Paint Company are pre-eminently one of the leading houses in the Dominion, and their well-advertised "Sun" varnish has received a cordial reception from the leading hardwaremen in all parts of Canada. They devote two acres in Toronto to this important branch of their business.

Dry colors and coach painting material of every description are manufactured in Montreal by this company. The waters of the Lachine canal are harnessed to powerful turbines; steam and electricity also being employed.

The most extensive oxide and graphite mines for the production of paints in the Dominion of Canada are owned by the Canada Paint Company. One branch of the works is entirely devoted to grinding and maturing white lead, and amongst their brands may be mentioned the "Painters' Perfect" white lead, which is beautifully soft and fine in the grain. It mixes well with linseed oil, forming a creamy, smooth paint of great covering power and undoubted durability. Every atom is paint, perfect paint, and there is no loss or residue of any kind. The "Painters' Perfect" white lead has become very popular everywhere.

To enumerate the specialties made by the Canada Paint Company would take up too much space in this special number, but the institution is one that deserves more than a passing notice, owing to the wide-spread popularity of the firm and its method of doing business. Their customers, it is said, comprise the elite of the wholesale and retail trade. "Show me," says a well-known traveller, "a successful merchant and I will show you a man who sells the manufactures of the Canada Paint Company." The management and shareholders are men of progress and push, and are all interested in the leading enterprises of the country. Their aim is to make everything they sell in Canada. That, they have been successful is beyond question.

Paint concerns are as numerous as the proverbial sands on the shore. However, a French-Canadian painter was recently heard to soliloquize as follows:

"Where evair I promenade abroad
How much peinture I see,
But I buy le brand, la Canada Paint,
C'est (it is) ze premiere qualite!"

PAINTS IN THE HARDWARE TRADE.

It is the general opinion throughout the trade that paints are becoming more extensively handled by hardware merchants every day. One is led to believe from the reports of the travellers that it is only a short time until the bulk of the trade will be done by hardwaremen, not only in the cities, but throughout the entire country.

PAINT

CONSIDERING

That **BRANDRAM'S B.B. GENUINE WHITE LEAD** is acknowledged to be the best in the world.

THE FACT

That it is the only white lead used in **"ANCHOR" Liquid Paint** confirms our statement when we say that **"ANCHOR" Liquid Paint** is superior to all others on the market.

THE WALL PAPER TRADE

HISTORY OF WALL PAPER.

ALMOST all the earliest examples of wall paper in use are to be found in China. In some of the Chinese provinces wall paper has been used for several centuries. In Europe the idea of having colored paper hangings for walls was first taken up in England. These coverings were made to imitate as closely as possible the velvet wall hangings of the great Genoese and Florentine merchant princes. They were introduced into the homes of wealthy Englishmen, and the conventional patterns chosen were rarely altered or changed.

The method by which the paper of our forefathers was manufactured differs considerably from the rapid manner in which the beautiful wall papers of to-day are turned out. The patterns were first cut in relief on wooden blocks, of which there was one for each color. The blocks were some 24 in. wide, and considerable care was taken that the various colors should register exactly. The pattern was printed off by hand on small square pieces of paper.

"Flock" papers, which were used a great deal early last century, were manufactured in quite an ingenious manner. After a design had been printed, the flock, i.e., wool of the necessary color, cut very fine, or else metallic powder, was sprinkled evenly all over the paper. This adhered only to the pattern of course. When a well-marked relief was required the process was repeated, and the whole thing pressed between the rollers.

Until a comparatively recent date, a great difficulty lay in producing more than three or four colors. This difficulty has now been removed by the invention of marvellously intricate machines, which will print dozens of colors all at once.

HOW WALL PAPER IS MADE.

SIX different persons are concerned in the manufacture of wall paper. From the artist who creates the design to the experienced operative who controls the rolling machine, the services of half a dozen skilled mechanics are required, each of whom adds his share to the completed production.

Primarily the success of the paper rests with the artist. He it is who invents the color scheme and creates the figure. Usually the design consists of the tendrils and blossoms of flowers, strangely and curiously interwoven.

When a design is accepted it is handed over to the "transferer." By means of oiled tracing paper he outlines the design on suitable material. This reproduction is wrapped about a wooden roller 18 in. in length and six in. in diameter, and by pressure an exact imprint is left on its surface.

The roller is now passed on to a trained workman who follows out the lines of the pattern with brass tape. This he drives into the wood, leaving a narrow edge raised above its surface. Each tape is intended to print a definite color, and, as there is a different roller for each color, great care must be taken that each raised outline for one color should be clear of the corresponding outline for another color. So delicate is this process that sometimes it requires months to finish a single roller.

Next the space between the brass outlines is filled with felt, hardened by a chemical process. The filling is made exactly even with the top of the brass lines.

The presses are now made ready with the set of rollers that has been prepared. Sometimes as many as 12 colors are printed at once. By means of delicate pins the rollers are held in position in such a manner that they will strike the paper exactly when required.

First, the paper is coated with a color for a background. This is done on another press, the paper running rapidly under brushes which supply the color. The paper is carried on to moving racks where it hangs in large loops, and is moved slowly over steam pipes.

It is then carried through the main printing press, each roller printing in turn. From this it comes out with the design completely printed. Meanwhile it is dried by means of a similar process to that employed before, and then run up into the rolling machines, where it is cut off in rolls of 16-yd. lengths.

The finer grades of paper, after being printed, are drawn through a machine composed of rollers vibrating rapidly, and these smooth it and give it a soft finish.

Embossed papers are made by passing the paper, after it has been printed, between two steel rollers. On one there is a raised design which exactly fits into indentations on the other.

HOW TO BUY WALL PAPER.

Though this problem is scarcely of as much importance as that which follows, it is yet deserving of careful attention on the part of the dealer. Too often he is inclined to leave everything to the traveller or the salesman, who sells him his goods. The advantage of personal acquaintance with the condition of the paper market is too often forgotten.

Ingrain Frieze manufactured by Stauntons Limited, Toronto.

True, the traveller and the salesman are well posted on styles and tendencies, but they are frequently biased in their view. If possible it will pay a dealer to have ideas of his own, derived from a personal investigation of what kinds of paper are meeting with popular approval. To secure this knowledge the trade paper is invaluable, provided it makes any pretence at a careful review of the wall paper situation.

In the second place, it would be a small town indeed which did not boast the presence of some individual of rather superior artistic tastes. If possible the services of this person might be enlisted at the buying time. It would seldom be necessary to pay for such assistance.

Thirdly, most towns have certain houses which are decorated after the latest styles, and which are consciously or unconsciously imitated throughout the

TORONTO.

town. If the dealer can show goods "very like Mrs. So and So has in her drawing room," he is more likely to sell them, than if he could not institute any such comparison.

The advantage of having a harmonious stock must be emphasized. There must be no discordant note, when the dealer shows his series of papers. The customer must be assured of the fact that his selection is tasteful and correct, and has not been made in a haphazard manner.

Lastly, the dealer should always have a full stock on hand. He must never be caught at the fag-end of the season with his stock low, and consequently with a poor supply of papers from which to make a selection.

HOW TO SELL WALL PAPER.

ONE of the chief requirements in making sales of wall paper, after a careful selection of stock has been made, is that the goods be properly displayed. A great deal depends on environment, and a dealer cannot spend too much in making his wall paper section bright, comfortable and attractive. If he will insist in keeping his stock of wall paper amidst a jumble of other stuff, and showing it in a confused, ill-lit corner, he will presently realize that his business in that line is not what it should be. Even though his store is crowded and small, he should yet find some means of closing off a section by means of screens or partitions in some brightly-lighted corner which he can devote exclusively to wall paper. A rug on the floor, and two or three artistic chairs set off the apartment nicely. The more artistic he can make this department the better for his business. It were a sordid person, indeed, who would not be influenced, even though it were ever so slightly, by neat and bright surroundings.

Salesmanship is also a great factor, and probably the principal factor in selling wall paper. At the back of all true salesmanship is knowledge, so we are back at the old necessity referred to before, viz., intimate acquaintance with the wall paper business. A dealer who can speak fluently about what the style in wall paper is, what Mrs. So-and-So is buying for her dining-room, and what the fine points of any particular paper are, is much more likely to make a sale than the man who aimlessly turns over a book of samples, and proclaims each paper prettier than the one before it.

A rapid summing up of the character of a customer is also useful. Some must be indulged and others driven. The man who reads character best and acts on what he discovers makes the best salesman.

WALL PAPER DISPLAY.

IN the wall paper section, there should be as little suggestion of the shop as possible. The customer has to be made to feel as if he or she were in home like surroundings. If possible, the piles of wall paper in stock should be kept elsewhere, or else covered up with draperies. At one corner of the department there should stand a display rack covered with natural-colored denim. Near by are the books of samples and a few rolls of the latest papers. With this equipment the dealer should be prepared to make a most effective display of his stock.

Some arrangement by which the light may be brightened or darkened is also beneficial. The dealer should endeavor to make the room correspond as closely as possible, in the matter of light effects, to the room which is to be papered.

see cut Book 8 page 62

Ingrain Frieze manufactured by Stauntons Limited, Toronto.

Not a few dealers fail to realize the great possibilities of their show windows for making displays of wall paper. Unless it be in stores devoted entirely to wall paper, it is seldom that a window dressed with wall paper is seen. And yet it is comparatively easy work to make a window look most effective in this way.

From the freak window, in which the colored ends of rolls are formed into a Union Jack, or some other design, to the lavishly hung window, filled with the richest and most expensive paper, is a long call, but there is a happy medium. A few rolls of harmonious design, hung gracefully over a simple framework, make up as pretty a window as one would like to see, and one that is simply and rapidly constructed.

Apart from the window and the regular show-room, it must be confessed, there are few ways of displaying wall paper. The sole fact that must be impressed is that harmony is the great desideratum. No two jarring colors or designs must be allowed to come into close proximity to one another.

A MODERN PAINT PLANT.

THE paint and varnish trade is today regarded as one of our foremost industries, the growth and development of which call for the most modern machinery and up-to-date methods. As an illustration of the way in which this demand is being met, the following account of a visit recently paid by a representative of "Hardware and Metal" to the Montreal factories of the Sherwin-Williams Company will be of interest.

Their Canadian headquarters are in Montreal, employing an office staff of 25 in number, besides 14 travelling representatives, and they also have an office and warehouse in Toronto and Winnipeg. Their entire Canadian business is under the management of Mr. C. C. Ballantyne. Order, system and organization are the keynotes of the business. Each department is entirely separate, but kept in touch with headquarters by elaborate and detailed reports. The advertising department is a business of itself, and the company are not only large advertisers on their own account, but by assistance and encouragement succeed in imbuing their customers with the same spirit. All their printing is done in three languages, English, French and German. Separate catalogues are prepared for railroad paints, steamship paints, street railway paints, house paints, etc.

In the factory proper, neatness and cleanliness are everywhere apparent. This is the more conspicuous as the nature of the work makes it extremely difficult, and the high standard in this regard is only maintained by constant care and effort. Ample dressing-rooms with individual lockers are provided, while lavatories and shower-baths have also been equipped to furnish a safe-guard to the health as well as the comfort of the employes. A large, airy and well-lighted portion of the building is portioned off as a lunch-room, to which the employes resort daily to eat their lunch, read magazines, play games, etc. There are about 75 people employed in the paint factory.

The mills and other machinery are of the company's own manufacture, from their special designs. They are kept constantly in good shape by being dressed with an automatic pick, which is run by compressed air, and will dress a mill in less than one quarter of the time formerly required to do the same work by hand. From the time the raw material undergoes the first process until it reaches the can as finished paint, it never has to be handled, the machinery being arranged so as to take advantage of gravitation.

Every batch of paint is tested in a practical manner, and the paint weighed into the cans, to ensure correct mixing

and full weight, as well as full measure. ... goes to the labeling room and is ... labelled and afterwards packed ... for shipment. Names of materials ... never used, but everything goes by ..., which simplifies clerical work, as ... as secures the necessary amount of ...

The varnish factory belonging to the same concern is located at Point St. Charles. It is equipped with the best and most modern machinery and employs about 20 men. There are in the storage department, three tanks having a capacity of 5,000 gallons each, 22 tanks of ... gallon capacity, and numerous ... tanks, sufficient to contain from ... months' to a year's stock of the various varnishes used and sold. All the linseed oil used is treated and refined on the premises. The gum which forms the basis in the manufacture of varnish, is imported direct from New Zealand in its original state, and is sorted into the various sizes and grades on arrival. This is merely one of the numerous features which go to make up a uniform product. The varnish after being cooked is forced through a filter-press by powerful pumps, and then allowed to age in tanks in the storage-room at an even temperature of 70 deg. until ready to be put on the market. A thoroughly-equipped testing-room, with all modern appliances, is in charge of a practical man, and all goods, paint, varnish and raw materials go through a thorough examination by him, to make sure that the high standard insisted upon by the Sherwin-Williams Company is maintained.

Both the paint and varnish factories are fire-proofed in the most efficient manner; automatic sprinklers are installed throughout; watchmen are constantly on duty, and every precaution is taken to minimize the danger from fire.

The company intend building a new factory this summer, which, when completed, will be one of the most modern and largest on the continent, affording employment to double the present number of hands.

AN INVALUABLE WALL CHART.

Many hardwaremen have started to sell ... paper within the last year or two. The line is one that yields excellent re... but has its own particular prob... which must be mastered if the busi... is to be put on a proper basis. Often ... necessary to figure out (from the width and height of walls) the dimensions of a room. To save the time this would take and to avoid the possibility of error, Staunton Limited, Toronto, have issued a neat vest pocket booklet which gives the quantities of side wall, border and ceiling required to paper a room anywhere in size from 3x6 ft. to 25x60 ft. and from 8 to 12 ft. high. Copies of this book will be supplied free of charge to any reader of "Hardware and Metal" who has not already received a copy. It is a booklet that every clerk should be supplied with.

TWO PAINT HOUSES COMBINE.

R. C. Jamieson & Co., manufacturers of varnishes, Japans, paints and oils, Montreal, established 1858, have taken over the business of the Baylis Manufacturing Co., which, previous to 1880, was known as Baylis, Wilkes & Co. The business in future will be carried on under the name of R. C. Jamieson & Co., Limited. Mr. Jamieson has been connected with both firms for a number of years, and is well known throughout the paint trade of Canada. The entire staff has been retained, and customers may feel assured that their orders will be looked after by those most familiar with their requirements. Their headquarters will be at 16 to 28 Nazareth street, Montreal.

PAINTS AND OILS.

TORONTO.

ORDERS for season's requirements are pretty well in and the jobbers seem quite satisfied with the amount of business booked. Deliveries are being made right along, but there is not the call for goods that is expected in a week or two. The demand for turpentine has improved somewhat, as some buyers who held off as long as possible have had to replenish their stocks. Prices are steady both locally and at Savannah. Linseed oil is not selling freely, buyers holding off in hopes of lower prices, which are not expected by the trade, in the near future at least. White lead is still at its low basis. The explanation of the continuance of low prices, in spite of advances in raw materials, is given in the fact that some manufacturers have contracted for their raw material, and that the competition is so keen that each house is hesitating about being first to make the advance. There is a fairly good trade doing. Red lead is 25 to 50c. higher this week. Paris green is easy, there being much rivalry between the British and Canadian product for business. Some houses are, in fact, quoting ½c.; see the quotations given below. Other houses are holding to prices firmly, believing it will pay to carry the stock over till next year, if quoted prices cannot be had. White zinc is 25c. per cwt. lower. Liquid shellac is 5c. higher. Glues have been in particularly brisk demand this year. Broken sheet and cabinet are ½c. lower. Castor oil is ½ to 1c. lower. Whiting is scarce and firm. Other lines are unchanged. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.00 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25-lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.75 to $5; ditto, in kegs of 100 lb., $5.25 to $5.50; No. 1, in casks of 560 lb., $4 to $4.25; ditto, in kegs of 100 lb., $4.25 to $4.50.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In five-gallon lots, 60 to 85c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.30 to $2.40; white, $2.35 to $2.45 per gallon; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8 to 8½c. per lb.; cabinet glue, in bbls., 11½ to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100-lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 13c. per lb.; arsenic kegs, 13½ to 14c.; 50 and 100-lb. drums, 14 to 14½c.; 25-lb. drums, 14½ to 15c.; 1-lb. packages, 15½c.; 2-lb. packages, 17c.; 1-lb. tins, 16c.; ½-lb. tins, 17c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 8 to 9c. per lb.; and 9 to 10c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 95c.; 2 to 3 bbls., 94c. delivered; Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

MONTREAL.

Owing to the sharp advance in Europe in dry white lead, amounting in some instances from 60 to 75c. per 100 lb., there is a stronger feeling in the local lead market, and buyers have been falling over each other in order to get their orders in. Makers of favorite brands have received a perfect avalanche of orders from all parts of the Dominion. The local prices have been advanced 25c. per 100 lb. Notwithstanding this rush of business in white lead, it is almost balanced by the heavy call for liquid paints. The warm weather experienced in the early part of the week, greatly increased the inquiry, and especially from Western Ontario. Varnish makers have despaired of looking for cheaper turpentine for some time to come, and, in a great many instances, have advanced their prices. Linseed oil remains steady, and no immediate change is looked for in regard to prices. Turpentine continues to be firm, and one dealer is of the opinion that the market will yet go to the dollar mark. Business generally is reported to be good. We quote as follows:

GROUND WHITE LEAD.—Best brands, Government standard, $5.25 to $5.50; No. 1, $4.52½ to $5.12½; No. 2, $4.65 to $4.75; No. 3, $4.27½ to $4.37½; No. 4, $3.90 to $4., all f.o.b. Montreal. Terms, four months, or 3 per cent. off for cash in 30 days.

DRY WHITE LEAD.—$5 in casks, and in kegs, $5.25.

DRY WHITE ZINC.—Pure dry, in casks, 6¼c.; in 100-lb. kegs, 6¾c.; No. 1, zinc, in casks, 5¼c.; in 100-lb. kegs, 5¾c.

WINDOW GLASS.

TORONTO.

Orders for prompt delivery have been coming in nicely, all sizes being in demand. Prices are firm locally in sympathy with advices from Belgium, which continue to be of a bullish nature. There has been a liberal inquiry from outside points for both plate and ornamental glass. Our quotations are as follows: Star, Under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

—

MONTREAL.

There is considerable business being done on the local market, but as yet very little is being done from the outside. About April 1 is the opening of the season, and dealers expect that the glass trade will then be quite busy. We quote: First break, 50 feet, $2; second, $2.10 for 50 ft.; first break, 100 feet, $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

THE REASONS WHY

Messrs. Push & Co. and all dealers buy and sell **Church's Cold Water**

ALABASTINE

are, because it is **time tried** and **time tested,** and they can speak with confidence when recommending it to their customers. "What's the use" they say, "of trying to sell something else, when it has to be recommended 'the same thing' or 'just as good as' **Alabastine?**"

"The Alabastine Company are the pioneers in the manufacture of wall coatings: the experimental stage is past with them. What they have forgotten, the manufacturers of kalsomines and the like are just beginning to experience."

Good goods, well advertised, fair margins, satisfied customers! These are a few of the reasons for handling **Alabastine.**

Alabastine is ready for use by adding **cold water.** This and other features are protected by Canadian Letters Patent.

Alabastine is made in Canada, and is for sale by Wholesale Hardware and Paint Dealers. Also by

HARDWAREMEN MEET IN CONVENTION

Hardware Section of Retail Merchants' Association of Canada Organized.

ENTHUSIASM was the predominant feature of the meeting held at the Waldorf Hotel, Hamilton, Ont., on Tuesday afternoon to extend the organization of the hardware section of the Retail Merchants' Association of Canada. The Toronto branch of this section has been particularly active for some time, but a desire had been expressed in several quarters that the work should be extended to include other centres. For this purpose the convention was called on Tuesday. There was a good representation of visitors from the neighboring towns. The regular delegates were: F. Hamilton, F. A. Carpenter, Geo. Boulter and Thos. Ramsay, Hamilton; E. R. Rogers, Toronto Junction; John Castor, J. S. Hall and General Secretary Trowern, Toronto; G. C. Wilson, Dundas; J. S. Howie, Brantford; A. E. Nichols, Fergus; and W. A. Sylvester, Stouffville. Letters were received from several hardwaremen who were unable to be present, but who were in full accord with the purposes of the organization.

E. R. Rogers, Toronto, was elected chairman. The first business was the reading of a report by Secretary Trowern, detailing the steps which had been taken to call the meeting. The report emphasized the fact that, in addition to a general desire on the part of retailers for a representative organization, many of the wholesale dealers and jobbers had expressed the desire that the retailers should be organized.

Chairman Rogers then called on Adam Ballantyne, chairman of the Hamilton branch of the Retail Merchants' Association, for a few remarks. Mr. Ballantyne responded heartily. He congratulated the organization on having such an efficient secretary as Mr. Trowern. He felt that if the hardware trade had to face such evils as the grocery had, they would find organization imperative. Every branch of business was organizing, making the most of the good times. Retailers were the most backward in this matter, so it was up to them to do something. Somebody would have to make sacrifices, but these would never be sorry; they would be handsomely repaid in the years to come. Competition, or the over-anxiety of the retailer to increase business in staple lines was the crying evil of the retail trade, so retailers should get together and take measures to ensure an increased margin on the goods they handle.

Chairman Rogers then asked for expressions of opinion from the delegates as to the necessity of a more thorough organization.

Mr. Wilson, Dundas, felt that the organization could never be complete until an organizer had been sent out to cover the trade thoroughly. Circulars had been sent out generously, but they would never reach the retailers and get them to become members.

Mr. Sylvester, Stouffville, thought that the trade would readily join an organization that would stop jobbers from selling to consumers. He cited cases where wholesale lubricating oil firms had persistently sold goods to people who had been his customers.

Mr. Nichols, Fergus, agreed that this evil was one of the most harmful the trade had to withstand. Some paint and oil houses were the great sinners in this matter. Some farmers from his section had too freely bought iron pipe in Toronto at wholesale prices. In fact, some jobbers seemed to consider they might sell to any person they desired, and yet hold the retailer's trade.

Chairman Rogers, Toronto Junction, was glad to hear such frank discussion. He referred to one jobbing house which had sold as small orders as one pane of glass or a can of white lead. Some of the wholesale hardware jobbing houses had another bad habit, that of sending out men with authority to do business with mills, factories; anyone, in fact. These men did not try to sell to retailers, but they represented the wholesale department of jobbing houses, which depended on the retailers for the bulk of their business, nevertheless.

Mr. Ramsay, Hamilton, had found the same practices prevalent in Hamilton to some extent. They were largely free from price-cutting, the one firm which had done that having decided that it was not good business.

Mr. Hamilton gave an interesting account of this firm's methods. It had not been in business very long. It had started out to cut prices all along the line, but some of the other retailers had talked the matter over in a friendly, candid way. The result was the firm was now as ready as any in the city to get a reasonable margin on all lines. It was to the jobbers' and manufacturers' interest to have the retail prices maintained, and they would readily assist the retailers in fixing them on a reasonable basis.

Chairman Rogers thought the members agreed as to the needs of a more complete organization. A motion would be in order.

Mr. Howie, Brantford, thereupon moved, seconded by Mr. Ramsay, "That in the opinion of this meeting the Hardware Section of the Retail Merchants' Association of Canada shoufd be extended to take in such districts as may be considered necessary, all working in conjunction with the central office in Toronto."—Carried.

Mr. Ramsay, in speaking to the motion, thought that it would be sufficient to send one organizer out at first.

Mr. Caslor thought an experienced man should be sent out at once. Sending out circulars had proved an utter failure. This was concurred in by practically all the members present, whereupon Mr. Caslor moved, seconded by Mr. Sylvester, "That this section is of the opinion that an organizer should be appointed at once by the general Association to extend the work of all sections throughout Ontario."—Carried.

Mr. Hamilton asked if the fee of $2 would be sufficient to carry on the work of the Association.

Mr. Caslor, treasurer of the Toronto section, was convinced that it was not enough.

Messrs. Hamilton and Ramsay spoke in favor of raising the regular fee for hardwaremen to $5. The good that might be done would repay that amount in a month or so.

A discussion ensued as to how this would satisfy other sections of the general Association. Secretary Trowern doubted whether some sections, the grocers, for instance, would be willing to pay the advance. Chairman Rogers suggested that the general fee might be left at $2, but that hardwaremen might each contribute $3 extra, to be a separate fund for that section.

Mr. Howie moved, seconded by Mr. Boulter, "That in the opinion of this section the fees should be increased."—Carried.

The action taken to perfect the organization next received further considera-

tion, a question being raised by Mr Hamilton as to the cost of sending an organizer over the Province. Secretary Trowern placed this cost at $1,800, or, at the outside, $2,000. He believed this could readily be secured from fees of new members, as the organizer would get members from all classes of merchants. This would be a much more economical method than any one branch sending out an organizer.

Mr. Hamilton felt that it might also be a wise step to call an organization meeting in London, if the hardwaremen of that city and district were sufficiently interested. He thought a couple of dealers from Hamilton would be quite ready to attend such a meeting to talk matters over with the London brethren, if the Toronto dealers would do the same. Sacrifices would have to be made if the organization were to expand. London was a centre convenient to many towns, and he believed a good meeting could be held there. He moved that London be corresponded with to see if such a meeting would have the support of hardwaremen there. Mr. Ramsay seconded the motion, which was carried.

The following questions which were sent out to the trade were discussed :

(1) Are you in favor of applying the "Price Restrictive Plan"—which is an agreement from the manufacturer to the wholesaler, and from the wholesaler to the retailer—to white lead and nails ?

All present answereh "Yes."

(2) Do you think that wholesalers and jobbers sell direct to the public ?

"Decidedly no," was the general verdict.

(3) Do you think it advisable for the trade to avoid buying scissors and cutlery from those makers who sell to departmental stores ?

No definite answer was given to this question, but it was agreed that an effort should be made to induce Canadian cutlery firms to be firmer in insisting that the departmental stores refrain from cutting prices in this line.

(4) Do you think the present retail price of spades and shovels satisfactory ?

Quite satisfactory was the general opinion.

(5) Are you in favor of having graniteware marked first and second quality, so that second-class goods cannot be sold as first ?

This was deemed unnecessary, as none of the retailers present had found second grade graniteware for sale in their towns. It was shipped, one speaker explained, to Newfoundland and the United States, particularly to the departmental stores in the latter country.

Secretary Trowern announced that a meeting would be held in the evening to discuss matters of general interest to retailers, but the majority of the delegates were unable to remain.

Before adjourning Mr Trowern desired to express his appreciation of the thorough way the Hamilton hardwaremen had taken hold of the meeting. He thought, too, the chairman was worthy of a vote of thanks. This vote was proposed and put to the meeting by Mr Hall, all manifesting their agreement thereto by three cheers and a tiger.

Chairman Rogers replied briefly, but to the point. The meeting had been, he was convinced, carried on along such sound lines, that if these were followed a strong organization would be the result. Work would be necessary, but he felt sure that with such strong men behind the movement in Hamilton and Toronto its force would be irresistible. There were many wrongs to right, but with a united body of hardwaremen desiring a remedy for any evil, they need not doubt as to the outcome.

NOTES.

"You can say that this meeting was a greater success than we anticipated," was the parting remark made by General Secretary Trowern to "The Hardware and Metal" representative.

"We have troubles of our own in Stouffville," said Mr. Sylvester. "We have no organization in the town, and one of the stores which handles hardware as a side line does not get reasonable prices. However, we are not in as bad a position as seems to be the case in some towns."

"We have a builders' exchange in Brantford," said Mr. Howie, to "Hardware and Metal." "The carpenters, masons, contractors, hardware dealers and other branches of trade interested in building operations have th?ir distinct section, yet all belong to the exchange. The system works splendidly. The hardwaremen in Brantford treat each other fairly and well."

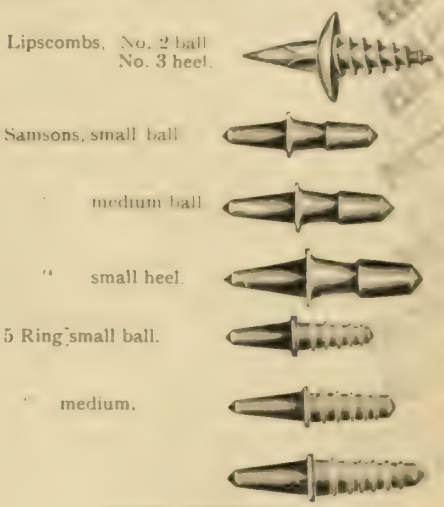
After the convention Messrs. Rogers, Caslor, Sylvester and Hall were talking over the discussion of the day. "It's a fact," said Mr. Caslor, "that we all sell some lines too closely!" "Yes," assented Mr. Rogers, "I believe we waste more time selling some lines than we ever get out of them. For instance, the time spent in counting brass tacks is worth double the price we get for them." "They could well be put in cartons of 100 or so," suggested Mr. Sylvester. ("Hear, hear," from three voices.)

WHEN SPRINGTIME COMES

Dealers thoughts turn to seasonable goods for dressing their windows. The season suggests newness, brightness, and cleaning up generally. The thrifty housewife is on the lookout for house cleaning goods of all kinds, and will naturally be attracted where the best display of these goods is to be found. The dealer who handles Boeckh's household brushes and brooms, and Cane's Seamarbet woodenware has a distinct advantage and an important lead over his competitors. The goods manufactured by United Factories Limited, are not only attractive and salable, but they possess many features of advantage both helpful to the dealer and satisfactory to the customer. Indeed they have forged their way to the front by intrinsic merit in material used, in design and workmanship and in being in advance of all others as really up-to-date goods. It is by handling such lines that the dealer builds up a permanent business on the foundation of the confidence and goodwill of satisfied customers.

LUMBERMAN'S BOOT CALKS.

At this season there is always a rush for lumberman's boot calks. In anticipation of this, H. S. Howland, Sons & Co., Limited, Toronto, have put a full line into stock. They are :



AN AMPLE WAREHOUSE.

The Philip Carey Manufacturing Co., of Lockland, Ohio, manufacturers of all kinds of roofing material, boiler coverings, etc., who opened a Canadian agency in Toronto a little over a year ago, have so increased their business on this side of the line that they recently moved into more commodious premises at 100 Front street east. Here the firm are very comfortably housed and have ample warehouse room and shipping facilities as well as a neat business office. Considerable credit for the increase in the Canadian trade is due to the energetic manager, O. A. Cale, who has spared neither time nor effort in the upbuilding of his [illegible] business here. A hand-some [illegible] at the beginning of the year bears further testimony to [illegible] the firm.

SADDLERY AND HARNESS HARDWARE

A PROFITABLE LINE TO CARRY.

By Mac

HARDWAREMEN all over Canada have within the past few years recognized the fact that saddlery and harness hardware is a line that is entirely suitable for their stores; that farmers look to them for the bulk of the goods in this line, whether there be a saddler and harness-maker nearby or not.

"You see," said one progressive dealer to the writer the other day, "farmers and other horseowners come to us for their house and staple supplies; we have for years sold them whips, blankets, bells, etc. Now we are selling practically everything in the line from a double set of harness to a kit of tools for repairing at home. We keep a good stock, and find our trade steadily increasing."

"Have you taken a particular method of developing this trade?"

"We soon found it wise to carry as great a variety of lines as possible. Farmers; in fact all customers seem to prefer to get all they want in one store to having to go to half a dozen stores to get the same goods. So we continually advertize that we keep everything that is good in this line. It is a fact that we carry many lines that neither of the two strictly harness shops in our town do, so that we often sell some lines to people who have first tried to get the goods in the harness stores. You can depend on it they will come to us first the second time.

"We are particularly careful not to recommend any line unless we know it to be right. If it is a new line, we tell the customer and tell him what the traveller said about it. That generally starts a laugh and frequently the buyers take the goods. Then, next time, we ask him how it worked. If it proved to be good we recommend it. If it does not, we never buy any more. We have a horse of our own and try such lines as harness dressings, axle greases, etc., ourselves."

The experience of the retailer quoted above is not unusual. The progress in the wholesale manufacture of harness, like that of boots, has been so remarkable in recent years that a hardwareman can get a full range of stock without having a practical saddler on his staff. Naturally the saddlers and harnessmakers object to the influx of machine made goods, but they are fighting against science and progress and must inevitably lose. The machine-made goods are going to sell and hardwaremen in many towns, recognizing this fact, are taking hold of the line before it gets into other hands. These are the men who are "growing with the times," who are moving forward and are making money. There is a good profit in the many lines included in the term saddlery and harness hardware, and, as a rule, there is a good margin of profit in them.

McLaughlin Carriage Company's New Block, Winnipeg.

MOVED TO LARGER PREMISES.

T. Woodbridge & Co, manufacturers of fine harness, etc., and dealers in wholesale saddlery hardware, Toronto, have removed from the premises on Colborne street, occupied by them for a number of years, and taken possession of larger quarters at 74-76 King street east. The building they at present occupy runs back as far as Court street, giving them about 15,000 square ft of floor space, with excellent shipping facilities.

Woodbridge & Co are one of the oldest firms in the Dominion in their line of business, having been established since 1872. During all these years they have enjoyed an increasing confidence and patronage of the trade.

Their stock is an extensive one and and they are in every particular admirably equipped for doing business.

A new and complete catalogue is now being issued by the firm and will be ready about the middle of April. They will be pleased to send a copy free to any hardwareman who may be interested as soon as it is off the press.

NEW CARRIAGE WAREHOUSE.

The McLaughlin Carriage Company's new warehouse in Winnipeg is one of the finest and most convenient west of Toronto. It stands on the corner of Ross avenue and Princess street. The building is entirely modern, solid brick on stone foundations, three storeys and basement.

On the ground floor are the main showrooms, with handsome offices in the rear. The second floor is used as a stock room, and the third as a room in which to put knock-down material together. There is a fine electric elevator and a large shipping room, which gives immediately upon what is known as the Princess street spur of the C.P.R. The accompanying cut gives a fair idea of the building.

"SOLARINE" METAL POLISH.

For producing a brilliant polish on harness parts or, in fact, on any nickel, brass, copper, tin or other metal surfaces, "Solarine" metal polish has won an enviable reputation in the United States and Canada. Any old, planished metal that has long lost its natural lustre can easily be restored by this useful article. The liquid, being free from grease, does not smut and smear.

These polishes are made by the Solarine Co., and handled in Canada by H. H. Falkiner, Toronto. They are put up in attractive tins, from 1/6 gill to gallons. With them are furnished attractive adver-

[illegible] trade. The sale of this polish has grown so steadily that there is no doubt of its genuine merit, so harness, hardware and stove dealers will make no mistake in ordering a supply for the spring trade.

SADDLERY AND HARNESS NOTES.

A GOOD reputation is not made in an hour, but is slowly built up from day to day by the recognition of sterling worth. Such is the process that has given Frank Miller's harness dressing success and oil such an enviable name throughout Canada. Merit always wins its own reward.

One of the oldest and sturdiest firms in Toronto is Samuel Trees & Co., wholesale saddlery and harness hardware dealers, Colborne street. This firm carries a full range of goods in these lines, and their word as to quality can be depended upon to the letter.

J. Darch & Sons, the old established dealers in saddlery hardware, London, Ont., are getting fairly well installed in the handsome new building erected to meet the needs of their growing trade. There are numerous finishing strokes to be done before all classes of goods made or imported by them are apportioned their proper departments and shelving. Their travellers are doing excellently on the road this season.

CANNOT HELP GROWING.

The Hamilton Whip Co. have just completed another large addition to their already extensive plant. The last addition gives them an increased floor space of about 25,000 ft. The wonderful success of this business is little less than marvelous, when it is remembered that this is now the third large addition constructed within the past two years. Their plant is now without question one of the largest and most complete of its kind in the world.

This company are to-day showing an exceptionally complete range of whips, lashes, etc. They carry ready for prompt shipment a full stock of all grades and classes, consequently are in a position to guarantee their customers prompt service. They report business brisk and every department working up to its full capacity.

Canada Horse Nail Company

MONTREAL

ON PARLIAMENT HILL

RUMINATIONS by "ZED."

House of Commons,
Ottawa, March 26, 1903.

AS the homely proverb hath it, "There are more ways of killing a dog than choking him with butter." And while a member of Parliament is far from being "a dog," and the various letters and interviews served up to him are not, as a usual thing, so smooth as butter, there are more ways than one of influencing him in his legislative actions. The favorite plan of attack is, of course, the deputation, composed of influential and diplomatic gentlemen, who demonstrate the absolute absurdity of the position maintained by the other fellow, and they alone are actuated by the high and patriotic motive of producing conditions "in the general interest of Canada." Next in order comes the pamphlet or brochure on the matter under agitation, and at the descending end of the scale comes the newspaper with a "marked" article.

* * *

The historian Green said of James the First that he wrote on subjects running from predestination to tobacco; and the marked copy is no less wide in its range. One of the last of this kind to reach the hands of the members came in the issue of March 16 of The Farmer's Advocate, under the caption "History Repeats Itself," and is a slogan against the request of the manufacturers of binder twine for protection to their industry. The writer sets up certain arguments of the manufacturers, real or imaginary, and proceeds to knock them down. He says that the statement is spread broadcast that binder twine is made chiefly from manilla fibre, which enters the United States free, but is subject to an export duty of ½ of a cent per lb. when shipped to Canada, the Yankees thus having an immense advantage in the cheapness of their raw material, according to the binder twine makers here. The writer takes issue with this statement, asserting that from 85 to 90 per cent. of the twine made in Canada and the United States is made from sisal fibre, which comes into Canada without cost by way of duty or impost of any kind. Further, he says that the cry that while American twine enters Canada free, Canadian twine is shut out of the American market by a duty of 45 per cent. is altogether misleading, as there is no duty on sisal or twine running 600 ft. to the lb. going into the States, the 45 per cent. applying only to twine of 650 ft. to the lb., of which very little, indeed, is made.

* * *

Where the aptness of the heading "History Repeats Itself" is made to come in is in the first paragraph, which asserts that away back in 1898 the cry was raised that unless protection was granted liquidation awaited the manufacturer, whereas since that time six new factories have been established, and they and the old ones have all paid good dividends. The article winds up: "Our manufacturers are flourishing, the country is going ahead; better let well enough alone, gentlemen, and continue to give the farmer a chance."

* * *

The fact is that some parts at least of the argument can be, and are fairly met by the exponents of the opposite view. The creation of the six new factories is said to be directly traceable to the large dividends of 40, 60 and 100 per cent. paid by a Brantford manufactory under the following very exceptional circumstances: The manager of the concern foresaw the disturbance which would necessarily arise in the raw material trade of the Philippines consequent upon the Spanish-American War, and laid in a very large supply while prices were still comparatively moderate. His foresight was amply justified by the result, and the enormous dividends above quoted were the result of this speculation, and are not possible under ordinary trade conditions. Promotors of new companies used the figures to sell their stock—result the new companies. It is further stated that at any time a short grain crop in the States would mean such a dumping of American twine on the Canadian market as to cripple, if not to close, every Canadian factory, and that while these factories are at present fairly prosperous, it is against this constant and very real menace that protection is sought.

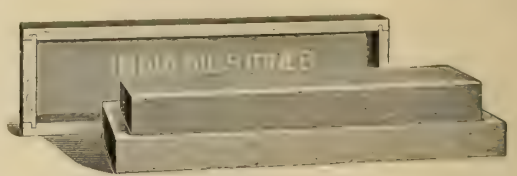
* * *

An amusing aspect of the case is that a great deal of the stock in the various twine companies is held by Ontario farmers, the number exceeding, it is said, 20,000, and all of these, while stout free traders in all other particulars, are firmly convinced that adequate protection for the binder twine industry is the crying necessity of the day.

INDIA OIL STONES.

THE attention of the trade is called to the India oil stone, illustrated herewith.

Although this oil stone has been on the market now for several years, it is, comparatively speaking, of recent origin. The India oil stone is what is usually termed an artificial stone, as distinguished from those stones cut from natural rock. It is made from pure crushed corundum, the hardest of all materials, the diamond alone excepted, and is, therefore, an extremely fast-cutting stone of remarkable durability.



It has several points of advantage over many other oilstones, principal among which is its evenness of grain. It has no hard and soft spots, thereby presenting an even working surface at all times. It is very strong and will not break under any ordinary conditions. It can be made into any desired shape or size for special tools, as it is made in moulds and then vitrified, instead of being cut or sawn. It is of extreme hardness, and will cut metals on which the very hardest-tempered files will slip.

The India oil stone line is manufactured by The Norton Emery Wheel Co. and marketed by The Pike Manufacturing Co., of Pike Station, N.H., who are its sole selling agents. The latter company is doubtless well known to our readers as the largest producer of sharpening stones in the world. An instructive booklet has recently been issued by The Pike Manufacturing Co., entitled "Oilstones: How to Select and use Them." This booklet gives information of interest and is of value to all mechanics on selecting, caring for and using oilstones for various kinds of tools. It will be sent free to any address upon application.

HEATING AND PLUMBING

TORONTO MASTER PLUMBERS' BANQUET.

NO body of men in Toronto know better how to enjoy themselves than do the Toronto Master Plumbers' Association and their friends. W. L. Symonds, president of the Toronto Chapter of Architects, expressed the feelings of all when, at the banquet given by the Association at McConkey's on Friday last, he stated that he had attended many such gatherings, but never before had he been so impressed with the spirit of cordiality and genuine goodwill that seemed to pervade the banquet from first to last.

The decision to give the banquet was only reached a fortnight before the date chosen, but a strong, energetic committee was appointed and everything was made to go with such vim and spirit that its success was assured from the first.

One of the best steps taken by the committee was in appointing Fred Armstrong, Queen street, chairman of the evening. He proved eloquent of address, never lost his happy smile, yet kept the assembly under the best control. To his left sat Edward Gurney, President Robert Ross, A. A. McMichael, of The James Roberstson Co., Limited; Thomas Patterson, of The Toronto Hardware Company; and F. J. Travers, of The Canada Radiator Company, Limited, Port Hope, Ont. To his right were Ald. Curry, W. L. Symons, President Toronto Chapter of Architects; W. Rae, President Eighteen Club; W. L. Gregg, Peter McMichael, of The Dominion Radiator Company, Limited; and A. W. Mann, of The Stevens Manufacturing Company. Among the other guests present were the following: W. H. Mahoney, Guelph; J. Myers, Stratford; George Stevenson and Ald. Wallace, Hamilton; R. P. Gourlay, St. Catharines; William Smith, London; R. Kerr, of The Kerr Engine Co., valve manufacturers, of Walkerville, Ont.; F. J. Taylor, Western Foundry Co., Limited, Wingham, Ont.; A. P. Saunders, Goderich Organ Co.; Chas. Morrison, of the James Morrison Co., Limited; J. J. Main, Polson Iron Works; Joseph Wright and Geo. Clapperton, The Bennett Wright Co., Limited; Wm. Mansell and W. Purdy, of Purdy, Mansell Co.; R. H. Lear and H. W. Meredith, of R. H. Lear & Co.; J. B. and W. Fitzsimmons, W. J. McGuire, Harry Hogarth, Ed. J. Brewer, W. J. Hallarn and W. L. Helliwell, R. A. Sommerville, of The Ontario Lead and Wire Co., Limited; W. G. Skelcher, D. L. Thomson, D. Glynn, A. B. Barry, A. E. Mercer, S. McCord, E. B. Walton, L. J. Kyle, M. McMullen, S. Wright, Peter Jessiman, Wm. Keating, J. B. Allen, David Menzies, John Torpy, Arch. Allison, William Tellord, J. E. Fullerton, E. L. Legrow, S. Pippy, W. N. Braybon, A. Rogers, R. J. Cluff, J. H. Gouinlock, Andrew Ross and D. O. McKinnon, "Hardware and Metal."

PRESIDENT ROBERT ROSS.

The menu and toast list was the first thing to catch the diners' attention. It was embellished with a photo of President Ross, a sketch of the same gentleman during last year's strike, and a specially prepared cover. In the menu were interspersed the following quotations from well-known authors.

"Bid them cover the table, serve the meat, and we will come to dinner."—Merchant of Venice.

"The Oxford duet—a song that reached my heart."—Alcock and Brewer.

"By my faith this is a lead pipe cinch."—Somerville.

"With daisies and saffrons are the meadows strewn."—Cluff.

"Bring me your orders and I care not who makes your laws."—A. A. McMichael.

"Brass sayest thou 'tis a base metal, 'tis false."—Morrison

"Good pipe is better than great riches."—Peterson

"An exile from my native land—I offer you the glad hand."—Mann

"Coffee—I'll have none of it. Bring me the Seagram—and let the red wine flow."—Anthes

At the conclusion of the dinner, Chairman Armstrong announced that the proceedings were to be divided into three parts, as plumbers were in the habit of dividing their work "roughing in,"

MR. W. MANSELL.

"finishing," and "smoke testing." The first part had, he felt, been satisfactorily completed; the second, they were about to start, and the third could be depended upon to follow. He welcomed in warm words the guests of the evening. He was glad to inform them all that the Association had been so strong that they felt that in a few years membership in it would be recognized as an essential proof of integrity and ability. He felt the time would come when manufacturers would treat their members as the only proper mediums through which the plumbing and heating supplies should reach the builder and contractor. Good plumbing work was done in Toronto to-day; work that would compare with the best in the world. The city boasted good and [illegible] inspectors, men whom the plumbers [illegible]ed and respected. He hoped all [illegible] feel the utmost freedom and the evening would be one of unmixed [illegible]. He then proposed the first [illegible] of the evening, "The King," which was [illegible] to with vigor.

"Canada," the next [illegible] was proposed by James McGill[illegible] and respond

ed to by Ald. Curry. Ald. Curry felt that every patriotic heart would readily [illegible] to this toast. Canada was not yet [illegible] the great nations, but it was no idle boast that the time was coming when this country should be one of the foremost nations in the world. Canada, like other countries of the northern clime, produced men of vigor and virility—what better proof of this could be had than the body of men about the tables? Canada had the forceful, energetic people, who were well fed and well housed—thanks largely to the plumbers and the steamfitters—they had the raw materials and the land to spare; the population had started to flow Canadianwards. Canadians had good reason to have faith in their country.

The chairman now called on Peter McMichael for a song if he could sing. The response was so hearty that practically everybody joined in the choruses.

"The Manufacturers and Supply Houses" fell to William Mansell for proposal. He called for response from Edward Gurney and Charles Morrison.

Mr. Gurney soon proved himself to be a humorist. He felt his position as a mere manufacturer before so many "masters." He approached them, he hoped, with the humility the occasion required. He had been with them on the occasion of their first banquet. Then "hard times" was a term too often heard; he had at that time prophesied that the time would come when there would be work for every plumber and steamfitter in the land and when all would get fair returns for their work. In times past the manufacturers had been criticized harshly, but it was really a matter of view-point. Much depended on view-point, as he illustrated from a yarn from the breezy West. He believed in associational work in unions as long as these organizations did not interfere with the liberty of others. He would allow no man or organization to dictate to him whom he would employ or with whom he should do business. Canada was standing at a history-making epoch in her national life. He felt it would be better for the country if all Canadian associations and unions were not in a position of subservience to executives residing in the United States or any foreign land.

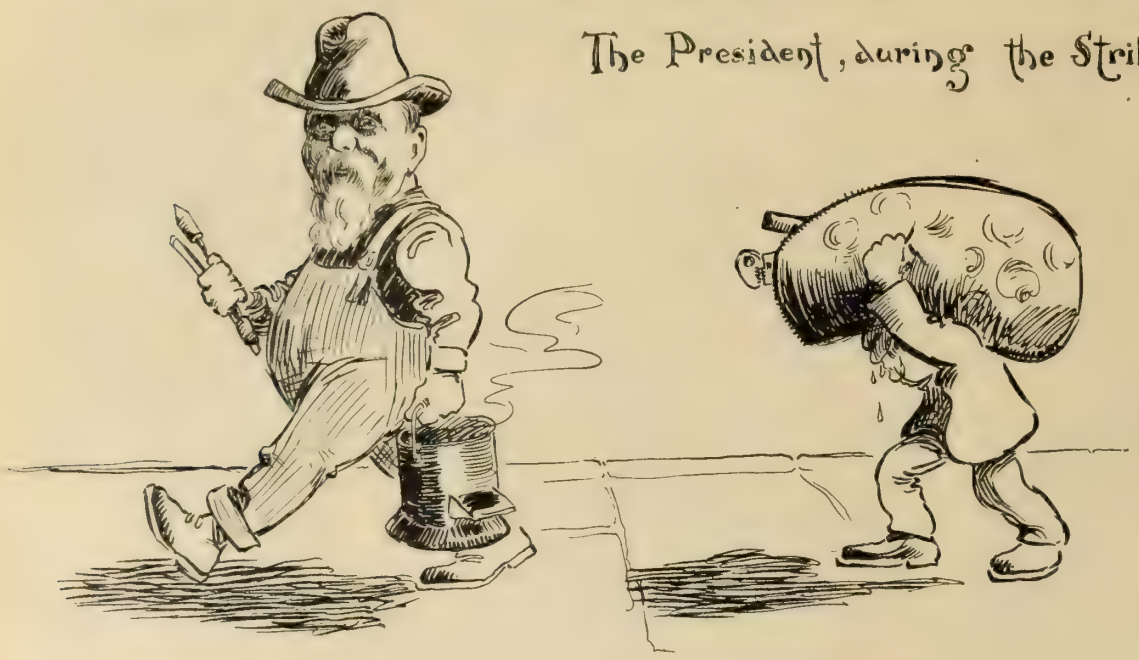
Mr. Morrison confessed that his speech was his maiden effort, but he could not fail to express his pleasure at being with such a bright, enjoyable assembly. He felt that the Canadian spirit was growing and that the spirit of the motto, "Canada for Canadians" would soon be expressed "Canadian goods for Canadians." At any rate, Canadian goods were being made of such quality that they had little reason to fear a foreign invasion.

Ex-President James Wilson now proposed "The Architects," calling on W. L. Symons and W. Rae to respond.

Mr. Symons felt it easy to make some complimentary remarks about plumbers. The truth was that the architects, in writing their specifications, always prepared those for the plumbers last. "Why?" queried the speaker, "Simply because they are the hardest. They call for great technical knowledge, the highest mechanical skill and the soundest judgment necessary to the completion of a building of any consequence." Plumbers should take pride in their profession, as on it depended the health and comfort of the nation. He had watched with serious thoughts the growth of organization of labor and capital. Labor to-day was so well organized that employers must get closer together for their own protection. He felt a crisis was eminent between the two bodies, but hoped that an understanding might be reached that would prevent dire consequences.

Mr. Rae was ready to endorse his predecessor's remarks about the importance of the plumbing and steamfitting profession. The architects had their own peculiar difficulties, and they were in a good position to judge the quality of work the plumber and steamfitter had to do. This entailed, he believed, a thorough grasp of the scientific principles that govern heating, lighting and sanitation and also great mechanical ingenuity. Toronto had no reason to be ashamed of its architecture, its sanitation or the heating of its dwellings, offices and factories.

W. E. Gregg was called on for a story. He responded with two definitions of a plumber. First, the old one, that a plumber is a man who works in lead; second, the modern one, that a plumber uses lead a little, makes much use of his brass and strives to line his pockets with gold and silver. (Instant uproar, but no damage done).



H. W. Meredith felt proud to propose the toast, "Sister Associations." He felt as if he were father of them, as he had proposed the toast at the first banquet, when there were hardly any sister associations to honor. Now they were dotted all over the Province and throughout the Dominion. There was no question but that when the organization was perfect it could be more useful than it was. He wished his voice might reach in clarion tones to the uttermost parts of the land counselling all to "come in and help" and to get the benefits of organization. He called on Henry Mahoney, of Guelph; Ald. Wallace, Hamilton, and Wm. Smith, of London, for response.

Mr. Mahoney, who represents British Columbia on the National Executive, had received correspondence to the effect that Vancouver and Victoria had both organized associations and would apply for charters at the next convention of the National Association.

Ald. Wallace had been delighted with the experiences of the evening. He brought greetings from an association which, though not as strong as the Toronto

organization was determined to make themselves strong enough to be effective. The employers had their organization and were looking to it that they were getting their profits. The journeymen were so strong that they had been able to secure an advance in their income of from 25 to 50 per cent. What M. P. A. had done this for its members? Until this end was reached they had work to do and he felt it would be done.

Mr. Smith (ex-president of the National Association), bore greetings from the London Association. This body would hold a convention on Good Friday, when it was hoped a proper sanitary by-law would be prepared. They were having difficulties in securing the passage of this by-law, but would keep up the fight until victory rewarded their efforts.

Frank Maxwell, in a few stirring words, proposed the toast, "The Journeymen Plumbers." The speeches in response, by W. Bush and W. Braydon, were as enthusiastic as any delivered during the evening.

"The Ladies," the final toast, was proposed by George Clapperton, who manifested his high appreciation of the fair sex. He called on George Cooper and "Andy" Mann for the responses. Before Mr. Mann delivered his oration Chairman Armstrong explained that he was a fine type of the up-to-date young business man. "Time was," said the chairman, "that business men came down to work, took their pen in their hands and started to work. Not so with Andy. He comes down to work, takes his typewriter in his arms and proceeds with business." It is needless to say that "The Ladies" was appreciated in eloquent manner by such gallants as Messrs. Cooper and Mann.

Before rising Ald. Curry felt that the success of the evening demanded that all should show their appreciation of the good work done during the year by President Ross, and during the evening by Chairman Armstrong. The toast was accorded with three cheers and a tiger.

President Ross was not going to make a speech. He wished all the boys the best cheer. He had worked hard for the Association and would continue to do so.

Chairman Armstrong was proud of the success of the evening. He would not leave, however, without giving away a story at the expense of two members of the Association. "You see," he explained, "Mansell had a dream. He had died and gone at once to Peter to ask admission to the home of the good, but he was refused and went away sorrowful, Peter saying that plumbers were not admitted. Soon Purdy came along, and although Mansell told him it was useless, he applied for admission and was passed in. Mansell, who had waited to see how Purdy got along was mad. "'Why did you let Purdy in when you said plumbers were not admitted?' asked he. 'Oh,' said Peter, 'Purdy's no plumber.'"

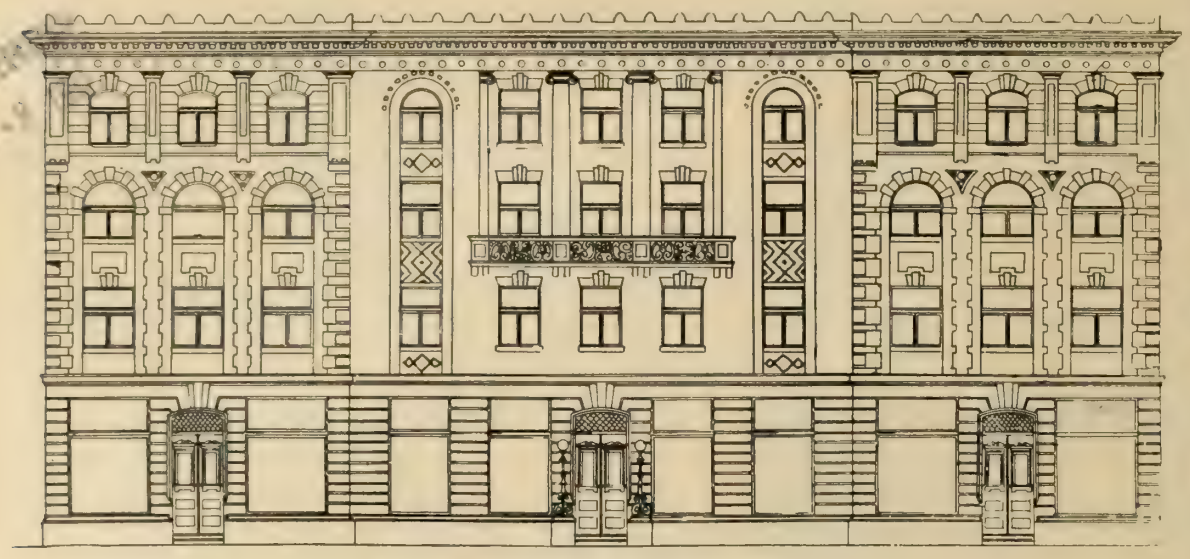
The evening closed with music by P. McMichael, Ed. Brewer, W. Mansell and J. Wilson, then cheers all round.

The committee to whom the success of the evening was due were: Fred. Armstrong, chairman; J. H. Wilson, treasurer; Wm. Mansell, secretary; James McKittrick, W. H. Meredith, Robert Ross, Frank Maxwell and Geo. Clapperton.

MECHANICS' SUPPLY COMPANY'S PREMISES.

THE new building to be erected by The Mechanics' Supply Co., Quebec, will be a fine-looking structure, according to the architect's plans. This firm, as has already been mentioned, have bought a large piece of land facing on two of the most prominent streets in the wholesale district, in the closest communication with the various railways and steamship lines that touch at that city. The electric street car system also passes the premises both back and front. It is also quite close to the Princess Louise shipping docks, where all the large steamers leave for Europe. Stavely & Stavely have prepared the plans for a thoroughly up to date warehouse, with large, well lit show rooms on the first and second flats. Special attention has also been given to the offices, which are in close communication with the various departments—the retail and wholesale, the shipping and receiving, the electric, the construction material, and other departments.

The Mechanics' Supply Co., established in 1889 by W. H. Wiggs, who is the sole owner and manager, has outgrown its present very cramped quarters, and in this new building elected to show lected to show their goods to advantage.



Mechanics' Supply Company's New Premises.

They employ a large force of specially-trained clerks, who are experts in the various departments under their supervision.

One reason for the success of this young firm is the admirable list of agencies they have. Their reputation of placing only first-class goods on the market has given them an enviable position in their local market, and in the Province at large.

We mention the following prominent specialties that they have handled ever since they commenced business, viz.: "Salford" radiators and "Daisy" boilers, "Standard" enameled sanitary appliances, Metallic Roofing Company's art metal interiors and exteriors, L. S. Starrett's fine machinists' tools, Toronto steel clad baths, and many other lines, too numerous to mention.

Mr. Wiggs is a firm believer in judicious advertising, and his efforts in this line have greatly added to the reputation his house enjoys of "having everything" in the specialties he handles. In his new premises special attention will be given to advertising so that "the man at the heart" of the business will have special opportunity to give the same the attention it deserves in this enlightened age. A special room will be fitted up for this with a large skylight and photographing

appliances at his command, and other [illegible] necessary to aid in getting out their printed matter.

PLUMBING AND HEATING NOTES.

CHAS. A. PARENT and W. H. Wiggs, of The Mechanics' supply Co., Quebec, have purchased at auction the stock of plumbing and heating material formerly belonging to L. H. Gaudry, of Quebec, and will hold sales to dispose of same immediately.

The journeyman plumbers of Winnipeg have made a demand for an increase of 25 per cent. in wages.

Woodstock, Ont., has passed a by-law to expend $20,000 on a trunk sewer, and to install a septic tank of sewage disposal.

J. W. Siddall, Toronto, has prepared plans for an extension to the Grand Union hotel, Toronto, to cost about $45,000. The sanitation and the heating in the present premises will also be overhauled.

F. A. Carpenter & Co., Limited, are closing up their excellent retail business in Hamilton, Ont., and will in a few weeks start a general jobbing business in that city, carrying steamfitters', plumbers', and mill and painters' supplies. They will open out their new business on King William street in a month or so, by which time they will have their catalogue ready.

The local hardware and plumbing firms are doing work on the various vessels in the harbor, that will run up into several thousand dollars. This was in effect the statement of a leading hardware merchant vesterday. New ranges and kitchen smokestacks have been put in the Turret liners; plumbing has been done in many of the boats for heating, closets and baths, and a very large quantity of marine supplies is being sold to the vessel owners daily.—Owen Sound Times.

The Gurney Foundry Co., Limited, Toronto, have issued a pocket text book of hot water and steamfitters' goods, which every steamfitter should have. Particular attention is called to the "Oxford" hot water boiler for dwelling houses; the "Dome," for green-houses; and the "Bright Idea," for the heating of large buildings by either hot water or steam. They claim that their "Quintet," "Quartet," "Duet," "Primo," "Vesta," and "Wall" radiators are correct constructions, both from a practical and artistic standpoint.

PLUMBING AND HEATING CONTRACTS.

TORONTO.

Purdy, Mansell & Co., Toronto, have contracts for the plumbing and installing sprinkler system for the International Harvester Co. (Deering branch), Hamilton, for hot water heating greenhouses for H. H. Fudger, Rosedale; for plumbing houses for D. Kennedy, Carleton street, Toronto.

Fiddes & Hogarth, Toronto, have the contract for alterations to steamfitting and plumbing in the head office of the Bank of British North America, Yonge street, and for plumbing in several houses on Kew Beach.

EXTENDING HIS CONNECTION.

W. S. Jackson, who for 11 years was buyer for the James Robertson Co., Limited, Toronto, and who for the past few months has been in business for himself, has already built up a splendid connection with manufacturers, as well as with the trade. Mr. Jackson has for some time represented in Toronto the Potters' Association, St. Johns, Que., and The

Granby Enamel Works, Granby, Que. He is now taking over the agency of The "Ideal" Manufacturing Co., Detroit, which addition will do much to build up his connection, owing to the strong position held by this company on the Canadian market.

In addition to being agent for these firms Mr. Jackson is himself interested in The Imperial Granite Ware Co., manufacturers of a wash-tub that has already won a good name on this market. A cut of this tub is published above. Mr. Johnson's address is now at 74 York street, Toronto.

D. Rowan, dwelling, stone foundation, corner Pendrill and Bute streets, $9,000.

B. C. Electric Railway, office building, Prince street and Westminster avenue, $3,000.

PLUMBING CONTRACTS DELAYED.

While there has been a particularly large amount of figuring done by Toronto plumbers this spring, work is starting very slowly. Architects are holding back contracts in many cases until labor difficulties, chiefly with the masons and carpenters, are settled. It is believed these troubles will be cleared away in a week or two.

D. H. HOWDEN & CO., LONDON.

SIMPLY to say that the firm of D. H. Howden & Co., London, Ont., is coming rapidly into favor, and that it is an up-to-date concern, would barely fulfill its popularity and progress. The fact of the matter is that the firm employs business methods that appeal to the trade.

The company is composed of D. H. Howden, L. C. Johnston, J. A. Brown, J. V. Givens, a quartette of able, intelligent men thoroughly versed in every detail of the hardware trade, and having an extensive acquaintance with the merchants throughout the Province of Ontario and the North-West Territories.

Their fine warehouse, situated as shown in their advertisement, on page 45 of this paper, is fitted up in the very newest and best style of modern structures, and with every convenience that the saving of labor can devise. There are three flats and a basement. On the first, samples of all goods on the premises are laid out in proper classification for speedy access to customers making selections. The second flat contains the stock of harvest tools, glass, mixed paints, horse blankets, pails, mops, binder twines, hay knives, etc. The top flat is loaded up with mowing machines, axes, screen doors and windows, scales, cordage, poultry netting, C. chains, harvest mitts, rubber hose, cartridges, L. chimneys, ladders, etc. The basement is literally jammed with building papers and felts, white leads, dry paints, putty, Paris green, turpentine, O. & A. wires, heavy hinges, nails, and many of the heavier kinds best kept in the lower part of the building.

The shipping room is always a busy spot, and here is weighty evidence that the firm is doing extensive business, goods being packed and shipped with an alacrity, that keeps entry clerks and porters busy all day long. 6

The offices are bright, clean and commodious, and in keeping with the general tidy appearance of the well-kept and thoroughly assorted stock, and near the offices are the samples of fine cutlery and silverware, for which this house has obtained much celebrity. Their travellers are having the best of luck on the road, and the letter-order clerks have their hands full.

"Hardware and Metal" wishes them long life and prosperity.

THE "ECLIPSE" CURRY COMB.

THERE have been many kinds of curry combs offered for sale, but experience has shown that they all have some radical defect. The curry comb for which people have been waiting, should be strong, for it has hard work to do; it should be rust-proof, because it is liable to get wet; it ought to be solid, so that it will not go to pieces when in use; it should be comfortable to the hand of the user; the teeth made so as to thoroughly clean the horse without irritating the skin. And if it can be made handsome in appearance, so as to please the eye, so much the better. All of these points of excellence are attained in the "Eclipse" curry comb, as illustrated on page 47 of this issue of "Hardware and Metal." It is manufactured of strong tin, finished with a heavy coat of lacquer, so as to be absolutely rust-proof. The teeth are ingeniously corrugated and indented, so as to thoroughly cleanse, without scraping or irritating the horse. The three pieces are strongly riveted together, each piece being solid, drawn into shape by die and press work, so there are no seams at the edges to open up and break.

Readers of "Hardware and Metal" are referred to the advertisement of The Eclipse Office Furniture Co., of Ottawa, Limited, the manufacturers of the "Eclipse" curry comb.

THE SIMPLEX CRYPTOGRAPH.

There are many times in a business man's life when it is desirable to send a telegram or cable absolutely secret except to the person to whom it is sent. To meet such contingencies, Geo. M. Thurston, treasurer of the American Screw Co., has prepared a comprehensive book, which is so arranged that none but the parties interested could make out the import of messages sent by it. The Cryptograph contains a vocabulary of 52,649 words; also a code of equal size. Each word in both the vocabulary and the code is numbered. When a message is to be sent the sender finds the words he wishes to use; subtracts or adds (according to the arrangement between himsef and the person he desires to communicate with) from these numbers; then employs, in the words actually sent, the words in the code appearing against the numbers secured by the addition and subtraction performed. This will be readily understood by the recipient of the message, who alone has the key, but cannot be found out by others. The whole work, while comprehensive and thorough in detail, is extremely simple and expeditious, and should be a boon to business men desiring to use a secret and private code. It is sold by The Cryptograph Co., Providence, R.I., at $2.

MOVED INTO LARGER PREMISES.

Things are looking up with the glass dealers throughout the country, if improved and more commodious premises go for anything, several of them during the last few years taking possession of handsome new quarters, a step necessitated by increasing business. The latest firm to make a move in this direction is the Canada Plate and Window Glass Co., Toronto, who have acquired much more commodious premises at 27 and 29 Richmond street east.

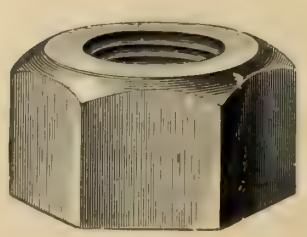
INGERSOLL, - ONT.



This is a man of great renown,
He's mayor of a busy town,
His fame he got by doing right,
Which came from using a good light.

The oil he used was PENNOLINE,
It's bright and white and very clean,
He started just five years ago
To sell the oil of oils you know.

He's prosperous now and rich you see,
His best excuse for modesty,
Turning his back on oil that's bad,
Wonderful success this man has had.

Yes, had a most remarkable career,
Now, dear reader, lend your ear,
His parting words are good advice,
He says, "Go thou and do likewise."

Refrigerators

If you are tired of "talking" others, and the small sales resulting, why not try

The Baldwin

They almost sell themselves — that's surely easier, and easily best.

A REFRIGERATOR OF EXCELLENT REPUTE.

We are now making Porcelain Lined Refrigerators—selling them too, and in large quantities. We find people like them, buy again, and induce their friends to buy. We have been highly complimented on the line many times. They are handsome, clean looking goods, thoroughly constructed of honest oak, finished golden, and fitted with nickel hardware of special design. They are refrigerators you can sell to your most particular customer, and be perfectly sure you have pleased him.

Mark this! It's quality that has made

BALDWIN
D R L
TRADE MARK
A I C
REFRIGERATOR

the name which this mark, marks!

We also make 150 varieties of popular family refrigerators—handsome goods to suit your trade—in ash, oak and soft wood. Some styles we have made for over 25 years, others new this year. We are old at the business but abreast with the minute.

We have special evaporatory features not found in makes not Baldwin's. The patented air enters the storage room at the bottom, thus forcing the warm air, with all odors and impurities, upward to the ice. This is a Baldwin feature exclusively, too costly for other makes.

Hardware castors, trap, and cleanable in three, the very best.

Catalogue for 1905 now ready and a postal will bring it.

Prices are low for Baldwin quality.

The large cut above shows a 24-foot cooler we recently completed. Shows what we can do and do well.

A PIONEER BUSINESS MAN.

FIFTY years is a long experience in business in Canada, yet this is the experience of C. M. Irwin, of Arthur, Ont. He was born in King's County, Ireland, and sailed for Canada, February 17, 1851, arriving here the following March, after a voyage of 32 days. There were no steamers on the Atlantic in those days, hence Mr. Irwin had to take a sailing vessel.

With the long experience he has had in business he is naturally an interesting conversationalist. This, HARDWARE AND METAL learned the other day, during a brief con-

C. M. IRWIN,
A Pioneer Business Man

versation with him. After referring to the circumstances of his arrival in Canada, in reply to a question from HARDWARE AND METAL, he said :

"I drove through the present town of Mount Forest in 1851, the year which I arrived in Canada, when it was nothing but forest, and there was scarcely a road opened up. At that time there were no carts and I had to walk to the post office, which was seven miles distant. The postage rate to Great Britain was then a York shilling, while to make a journey to England and back required at least three months.

"I began business on my own account in 1852, opening a general store on the Governor's road between Hamilton and Paris. I was carrying on business there during the Crimean war. I bought my hardware from the old Bellhouse firm in Hamilton. Mr. Leggatt was bookkeeper for the firm, so you will see, therefore, that I purchased hardware in Hamilton before the firm of Wood & Leggatt was formed, the predecessors of Wood, Vallance & Co. In those days hardware in the country was usually carried in general stores. Purely hardware stores were confined to larger places. Stoves, tinware and graniteware were later additions, while mixed paints and lamp goods were practically unknown. In 1858 I moved to Kenilworth, on the Owen Sound road, where I opened a general store in connection with a farm. I spent 18 years there, after that buying out a grocery business in Brantford. The Brantford store I kept for over two years, and finally sold out to George Watt & Sons, and buying out myself a general business in Arthur. This was in 1880, and I continued business for five years, after which I sold out and took a trip to the Old Country, where I bought a considerable quantity of goods. Returning to Canada, I opened a hardware store in Arthur in 1885, and in 1897 started a branch at Grand Valley. This branch at Grand Valley I sold out the other day to McCullough, Nichol & Duke."

Mr. Irwin, in spite of his age, is still energetic and apparently in good health, and is frequently to be seen in the wholesale houses at Toronto buying goods. If what he said to HARDWARE AND METAL can be taken as a criterion, he is evidently desirous of spending the rest of his days free from business cares.

HIGH QUALITY FIRE BRICKS.

Jones Bros., manufacturers of stove bricks, at Bracondale, one of the busy suburbs of Toronto, lately received a neat compliment from Mr. Cunningham, of The Western Foundry Co., Wingham, Ont., a gentleman of many years' experience in the stove business. In placing a large repeat order with the firm, he said, "they were the best bricks I have ever handled." Jones Bros. have had a long experience in the manufacture of fire bricks, which they make only from the best fire clay. They have a large patronage with the trade, both wholesale and retail.

FURNACES WILL START IN THE SUMMER.

The plant of the Londonderry Iron Works, Londonderry, N.S., is expected to be in operation by June or July next. Drummond, McCall & Co., who have taken the works over do not care as yet to make definite statements in regard to the expected output of the mills ; but it is likely that they will be in the neighborhood of 48,000 tons of foundry pig iron a year. The company are in a position to be able to use all their own ore, and will make all their own coke. They will not go into coal mining.

The mills in Londonderry are being enlarged considerably, and when blasting operations have commenced, this will be one of the most modern and well-equipped plants in the Dominion. The home and foreign markets are likely to both be exploited by the company, though at present their plans in this direction have not been entirely crystalized into working shape.

GLASS FIRM'S ANNUAL MEETING.

The annual general meeting of the shareholders of the Consolidated Plate Glass Co. of Canada, Limited, was held recently at the head office of the company, 75 Wellington street west, Toronto.

The financial statement for the year 1902 was presented, showing the results of the year's business, and was received with expressions of satisfaction.

The company has now offices and warehouses carrying large stocks at Toronto, Montreal, London, Ottawa and Winnipeg, the Winnipeg branch having been established under favorable auspices within the last six months as an outgrowth of the expansion of the business westward.

With facilities for handling large importations of plate, sheet and fancy glass, and the increasing demand throughout the country for such goods, the outlook for the future is highly favorable.

The officers for 1903 are as follows :

President—W. R. Hobbs, Toronto.
1st Vice-President—F H. McCausland, Toronto.
2nd Vice-President—A. Ramsay, Montreal.
Secretary—J. F. Wilson, Toronto.

ASBESTOS GOODS.

The Eureka Mineral Wool and Asbestos Co., of Toronto and Montreal, is another firm which has enjoyed an unusual measure of prosperity during the past year or so. The company has recently purchased the commodious building at 74 York street, Toronto, formerly occupied by The Samuel May & Co. and The Dodge Split Wood Pulley Co. Here they intend manufacturing on a large increased scale. They are the only house west of Montreal making a specialty of asbestos goods. Their lines include packing, pipe and boiler coverings, engineers' and mill supplies, etc., also high grades of furnace cement and stove lining. They will be pleased to communicate with any hardware merchant who is interested in any of their lines.

"If it's Wire Work or Metal Work, tell us what you want--we can make it."

AN OPEN LETTER.

To The Hardware Trade:

We want you to act as selling agents for our manufactures. A very considerable and profitable trade can be done in lines not kept in stock. Residences, stores, churches, public buildings, factories, theatres, hotels, banks, offices, etc., require our Wire, Iron and Metal Work. Learn the requirements and supply them at a profit. This trade belongs to you. We furnish catalogues, advertising matter, lowest trade prices and special designs, when required. Get acquainted with us—we wish to explain the proposition more fully. Awaiting the favor of an early response.

Yours, very truly,

Dennis Wire and Iron Co.,

Designers and Manufacturers
Wire, Iron, Brass and Electro-Plated Work. London, Ont.

HARDWARE NOVELTY.

THE

Ingersoll

American Watches.

RETAIL PRICES, $1.25 to $2.50

ARGUMENT.

We now offer a practical time piece for the Hardware Trade of Canada, and base our statement upon the following:

First—It is absolutely guaranteed to keep accurate time.

Second—It stands rough usage and does not get out of order easily, making it the only watch for dealers outside of the jewelery trade to handle, and also making it a practical one for sportsmen, boys and all men who give a watch hard usage.

Third—Its low price and high quality insure a tremendous sale, which we further augment by furnishing many handsome advertising devices for your store.

Fourth—Last but not least, these watches offer a handsome profit. Price cutters are not supplied.

Sold by several leading Hardware Jobbers of Canada. We will tell you who they are upon request.

Trial Offer—To any Hardware Merchant who will write to us upon his business letter head and inclose 75c. we will send a sample watch (duty not paid) and our catalogue, so that he can test its accuracy and durability.

INFORMATION ON REQUEST.

Manufacturers of Patent Bits and Augers

SEND FOR CATALOGUE

A COMPANY THAT HAS GROWN.

IN commenting on a particularly successful convention of sales agents of The Canadian Frost Fence Works, Welland, Ont., The Telegraph, of that place says: "The greatest growths frequently come from the smallest seeds. That is a law of nature, and it is also a law of commerce. The gigantic organizations spring from small shops. The truth of this is being brought home to Wellanders in The Frost Wire Fence Co. The Frost Co. of five years ago would hardly be recognized in the same company of to-day. When the town was filled last Friday and Saturday with the Frost agents brought from all over the country, a realization of the magnitude of the company's business came with pride to Wellandars, and particularly to those who first induced the company to locate here.

"Mr. H. L. Frost, the leader of the Canadian Frost Fence Works, is the man who is chiefly responsible for the growth of this institution, which has become so important to us. He has surrounded himself with brainy, capable assistants, clever workmen, and hustling agents over the whole Dominion, all of whom are booming the company. His pluck, perseverance and rare ability have done this. And they will do more. Mr. Frost himself predicts that the whole five acres of ground, which now surround the Welland factory, will be covered by this plant. His assistants and employes have the staunchest faith in him. So has Welland."

LARGE SHEAR MANUFACTURERS.

Thirty years ago the Clauss Shear Co., Fremont, Ohio, started the manufacture of a small line of nickel shears, and to-day they are among the largest shear manufacturers in the world. They were the first parties that successfully furnished at a line of Japan handle with nickel plated blade shears.

Ten years ago they placed their goods on the Canadian market by opening a branch office in Toronto under the supervision of L. A. Lobnas. During this period their goods have retained their quality as well as price and are now selling for 60 per cent. discount from list of nickel goods, and 67 1/2 per cent. on Japan goods. They have also increased their lines as follows during the period: Pruning shears, dental snips, tinners' snips, tailors' shears, rubber shears, candy shears, carpet shears, glove shears, glass shears, razors and razor strops.

They are now placing their travellers on the road with the most complete line of shears, scissors and razors ever placed on this market.

The Canadian business is conducted entirely by Canadians, each and every person connected with the Canadian office being a Canadian. They ask your continued patronage. They will be pleased to mail their latest catalogue to any merchant answering their advertisement, which appears elsewhere in this edition.

NYSSA FISHING FLOAT.

The accompanying cut shows the patent Nyssa fishing float, manufactured by The J. M. Mast Manufacturing Co., of Lititz, Pa. This illustration shows at once the readiness with which this float can be attached or detached from the line, and this fact will at once commend it to the attention and approval of fishermen, who have always found it inconvenient and a great loss of time to take the old-fashioned float from the line when the float proved too large or too small for the waters they were fishing in.

This float is rapidly becoming popular, and is worth the attention of the trade, as well as of the individual fisherman.

E. H. Greenfell & Co., of London, Ont., are the Canadian representatives of The J. M. Mast Manufacturing Co., who have also a line of rat and mouse traps, sold extensively by all the jobbers in Canada.

FISHING FLOATS AND ANIMAL TRAPS.

The J. M. Mast Mfg. Co., Lititz, Pa., make a specialty of fishing floats and animal traps of all kinds. This firm has won an excellent reputation on this market for their animal traps, mouse and rat traps particularly. Now they are introducing a float which they claim to be lighter and more buoyant than cork, and that it can be readily attached to or detached from the line without removing the latter from the rod. The trade should write for this firm's catalogues.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS, COMPROMISES.

THE Strathy Wire Fence Co., Limited, Owen Sound, Ont., has assigned to George S. Kilbourn.

Gustave Doucet, carriagemaker, St. Angele De Saval, has filed a consent of assignment.

INCORPORATIONS AND CHANGES.

R. C. Jamieson, paint manufacturer, Montreal, has been incorporated.

The Vulcan Iron Works, Limited, Winnipeg, has been incorporated.

The Laurentine Mica Co., Limited, Ottawa, has been incorporated.

C. Gelinas & Fils, door manufacturers, Shawenegan Falls, Que., have been registered.

The John Clayton Plough Works Co., Limited, Winnipeg, Man., has been incorporated.

The De Wolfe Hardware Co., Limited, St. Stephen, N.B., are applying for incorporation.

P. T. Lagare & Freres, carriage and agriculture implement merchants, Quebec, have been registered.

Silverthorne & Mathieson, livery and implements, Lumsden, have been succeeded by Mathieson & Morton.

The Record Foundry and Machine Co., Moncton, N.B., are applying for supplementary letters patent increasing capital to $1,000,000.

PARTNERSHIPS FORMED AND DISSOLVED.

P. Demers & Fils, hardware merchants, Montreal, have dissolved partnership.

Leclerc & Leblond, tinsmiths, Grand Mere, Que., have dissolved partnership.

E. F. Landry & Co., tinsmiths, Three Rivers, Que., have dissolved partnership.

R. C. Jamieson & Co., manufacturers of paints, Montreal, have dissolved partnership.

Ross Bros., painters, Hamilton, Ont., have dissolved, and James H. Ross continues.

SALES MADE AND PENDING.

James Bayley, wagon maker, Sutton West, Ont., is advertising his business for sale.

McKeen Bros., hardware merchants, Lenore, have sold out to McLaren & Robertson.

W. T. A. Hishleigh, hardware merchant, Hagersville, Ont., has sold out to John C. Kayser.

DEATHS.

Henry Minden, tinware merchant, St. John, N.B., is dead.

CATALOGUES, BOOKLETS, ETC.

A BASEBALL GOODS CATALOGUE.

PARTICULAR attention is directed to John Millen & Sons' 1903 catalogue. This is their seventh annual issue, and is larger and more complete than ever. It contains over 250 pages, and more than 1,200 illustrations, describing bicycles, bicycle parts, sporting goods of all kinds including fire arms; also keys, which is one of their leading lines.

The catalogue is a handsome one typographically, and the various lines are numbered, described and indexed in a manner that permits of rapid reference.

This catalogue will prove of interest and profit not only to the sporting goods houses and bicycle dealers, but also to the hardware merchant, for these goods are becoming more and more recognized as a natural line for the hardware trade to handle. As a matter of fact, the profit and rapid turnover to be had in this branch of the trade, make it a valuable adjunct to the hardware business, as many can testify.

John Millen & Sons carry a complete stock at their branch warehouse, 132 Bay street, Toronto, for the convenience of their large Western trade. Customers can be assured of prompt execution of orders from either Montreal or Toronto.

A postal request will bring this catalogue. Write now.

TIMELY RHYMES BY "OLD TIMER."

The Columbian Hardware Co., Cleveland, O., are sending out a series of booklets containing poetry on industrial topics by "Old Timer." The productions are the best of the kind received by "Hardware and Metal" for many a day. One of the poems is reproduced on page 85 of this issue. Credit to the writer was inadvertently omitted. This is but one of several gems from "Old Timer." In other poems, as in the one printed, he strikes a responsive chord in almost every reader of his poems.

THE CEMENT AGE.

Such is the title of an extremely interesting booklet issued by The Canadian Portland Cement Co., Limited, represented in central and western Ontario by The Rathbun Co., Toronto, and in eastern and western Canada by The St. Lawrence Portland Cement Co., Montreal. The booklet gives photographic illustrations of the great variety of new purposes to which Portland cement is being put. Both because of its artistic and its instructive value this booklet should be secured by every hardware retailer in Canada.

STEEL ROLLING DOORS.

The Columbus Steel Rolling Shutter Co., Columbus, O., have issued a booklet giving literal illustrations of their steel rolling doors in use, also sectional views, showing the nature of construction and the method of operation. These shutters are coming into large use for factories, warehouses, mills, freight sheds, etc. Hardwaremen might through this catalogue be able to do business in their own locality in this line. The catalogue will be sent to any hardwareman or owner of building mentioning "Hardware and Metal."

DAWSON HARDWARE CO., LIMITED.

An unique and interesting feature has been added to the catalogue issued by The Dawson Hardware Company, Limited, Dawson City. In addition to a full list of hardware and machinery lines carried by them, they have several articles that are bound to interest all readers, and particularly those into whose hands the book will fall. There are historical sketches, educational and trade returns, statistics of development in the Canadian Yukon; of the gold output; of the fuel supply; of miners and mining; also a directory of the Yukon officials. The work is gotten up as a regular monthly publication, thus permitting it to go through the mails at magazine rates, a shrewd business move.

POWER TRANSMISSION MACHINERY.

The Dodge Mfg. Co., of Toronto, Limited, are now sending out their third issue of their B. 6, catalogue of power transmission machinery. In this catalogue standard lists are adhered to, which, with their discount sheet, enables intending purchasers to make a clear estimate of net cost of material wanted. This will be recognized as a reform by mill men who have been accustomed to buying heavy shafting, iron pulleys, bearings, etc., by the pound. Complete dimension sheets covering the standard lines are given in the catalogue. This catalogue should be secured by Canadian mill and factory men generally, as well as by the hardware trade. It will be sent to any reader of this paper upon application.

"ENTERPRISE" SPECIALTIES.

The claim has frequently been made that Americans are the most inventive people on earth. There would be no possibility of gainsaying this statement if the average American firm would show each year such results of inventive genius as is demonstrated annually in the catalogues issued by The Enterprise Manufacturing Co., Philadelphia, Pa. The lines handled by this firm include sad irons, meat cgoppers, for home and factory, grinding and pulverizing mills, suction and force measuring pumps and faucets, lawn mowers, wine and jelly presses, seeders, slicers, in fact, household goods of every description. So many new ideas are incorporated in the lines shown by this firm that no up-to-date hardware retailer can afford to be without this catalogue unless he carries a full line of the goods described. It should be at hand in any case. A copy will be sent to any reader of "Hardware and Metal" on application.

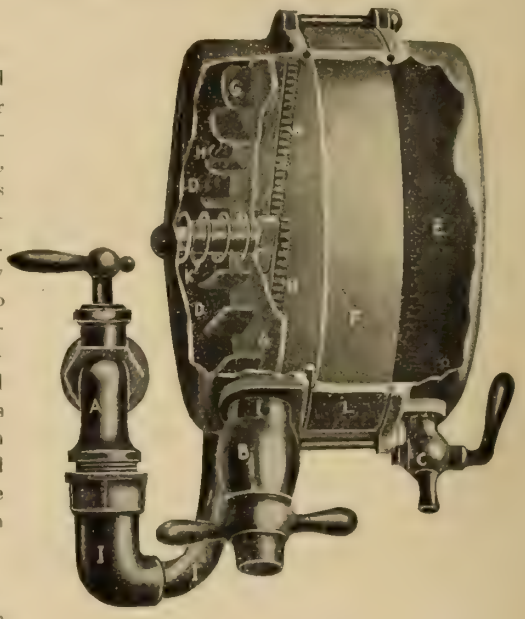
STEEL STAMPS AND STENCILS.

There has always been some difficulty about getting good steel stamps, stencils and a variety of goods which are known as stamp goods in Canada, but it is not so now.

The Hamilton Stamp & Stencil Works, whose advertisement appears on page 177, go extensively into the manufacture of the different lines as set forth in their catalogue No. 6, now ready. Space would not permit us to enumerate the variety of goods produced by this concern. Their catalogue of 142 pages describes the whole business fully, and should be in the hands of every important business house and manufacturer. Send for one and keep it for refereoce; it will repay you.

THE "ROTA" FILTER.

It is about as important for dealers who sell filters to have in stock those only which

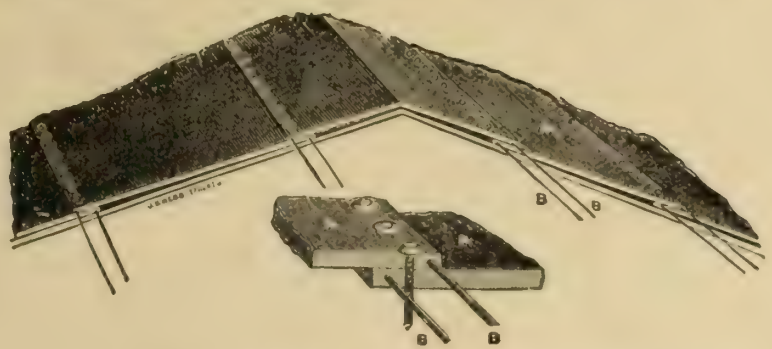


are reliable and are not filters in name only as it is for those who are using them. The "Rota" self-cleaning filter is one of those which is highly recommended. As its name implies, it is self-cleaning, and consequently delivers the water fresh, thus obviating the stale taste which is only too common with water brought through some filters. Besides keeping the water fresh, the filter is guaranteed to be perfectly pure and healthy. The accompanying cut will give the trade an idea as to the interior construction of the filter. The "Rota" is manufactured by the Rota Filters, Limited, 10 Sandwich street west, Windsor, Ont.

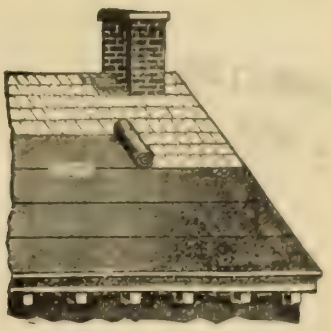
Paterson's

Wire-Edged Ready Roofing

Durable, Economical, Fireproof.



"A" shows method of laying a "Red Star" Brand Roof with 2-inch laps secured by nailing two inches apart. B B shows wires running through the edges of the roofing, giving it great strength at the joints or laps—a very desirable feature, especially in localities where high winds prevail



LEAKY SHINGLE ROOFS

May be made Water-Tight and Durable without removing the shingles, by covering the roof with "Red Star" Brand Ready Roofing

Shingles are growing scarcer and poorer in quality year by year, therefore, some other suitable Roofing Material, to take their place, must be found.

We would like to interest you in handling our Wire-Edged Ready Roofing, because it is good Roofing, and the only popular substitute for shingles.

Our Roofing is fireproof, lasts longer, and costs less than shingles, so it's easy to sell.

We've been making this Roofing in Canada for about 20 years, and our sales are now over 100,000 rolls annually.

We are trying to induce the consumer to buy from the hardware merchants. Won't you assist us ?

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

HARDWARE.

Montreal, March 27, 1893

THE bookings for the past week have been very large, especially for shipment after the opening of navigation and the sea freight rates go into effect. The demand for harvest tools is exceptionally heavy, and the trade fears for a shortage in some lines in the near future. A reduction of about 10 per cent. has taken place in agricultural wrenches, and the discount is now 70 per cent off. Harvest tools have experienced an advance during the past week, and the discount is now quoted at 60 per cent. Sectional sash weights are selling at 2½c. per lb., and blind hinges at $1.95. Indications point to a shortage in wire nails, and wholesalers are advising their customers to order early. Ice cream freezers are selling freely, and a much better season is expected than a year ago. The trade generally is good, and most houses are working nights, in order to get orders packed and ready for shipment. In fact, one of the leading houses in this city claims their business is a third larger than a year ago.

AGRICULTURAL WRENCHES.—A reduction has taken place in this market and the following are the new prices: No. 6, $9; No. 8, $10; No. 10, $12; No. 12, $14; No. 15, $24; No. 18, $30; No. 21, $36. Discount 70 per cent.

CANT HOOKS.—A brisk demand continues for cant hooks at unchanged prices. We quote as follows: No. 12, $10; No. 8, $11.50; No. 8a, $11; No. 2, $12; No. 7a, $16; No. 6a, $14.50; No. 5a, $11.50.

LAWN MOWERS.—There is a very firm feeling on the market, and orders are coming to hand rapidly. We give following quotations: 10½ in. wheel x 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14 inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14 inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½ inch wheel by 10 inch cutter, $6; by 12 inch do, $6.50; by 14 inch do, $7; by 16 inch do, $7.50. Grass boxes are quoted as follows: 12 inch, $2.25; 14-inch, $2.25; 16 inch, $2.50; 18 inch, $2.50; 20-inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE.—Orders for spring shipment are heavy and the market is reported as being firm. We now quote: $2.80 per 100 lb. f.o.b. Montreal, $2.45 f.o.b. Cleveland in carlots of 15 tons, and $2.67½ f.o.b. Cleveland in smaller lots.

GALVANIZED WIRE.—Quite a fair trade is doing in galvanized wire. Quotations are as follows: No. 5, $3.75; No. 6, 7 and 8, $3.45; No. 9, $3.30; No. 10, $3.20; No. 11, $3.25; No. 12, $3.65; No. 13, $3.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No. 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—There seems to be a tendency to increase the prices of this market. Our quotations are still as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FENCE WIRE.—A good demand is noted at unchanged prices. The discount is 25 per cent. with the following extras: 1 and 2 lb. hanks, 25c. per 100 lb.; ½ lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—The market is very firm and a fair business is being done. The discount is 60 per cent.

PRESSED SPIKES.—There is a brisk demand for pressed spikes. The discount is 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—The market is unchanged and inquiries are received daily. Quotations follow: $3 per 100-lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50-lb. packages.

WIRE NAILS.—There is nothing of importance to report in wire nails. We now quote: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—A fair trade is doing at unchanged prices. Quotations are as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—The business is fair and the market is firm. Prices follow: Iron shoes, light and medium pattern, No. 2 and larger, $3.40; No. 1 and smaller, $3.65; snow pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.55; No. 1 and smaller, $3.80; featherweight, all sizes, 0 to 4, $5.10; toe weight, all sizes, 1 to 4, $6.35. Shoes, more than one size in a keg, 10c. per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—The prices remain unchanged. Discounts are: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS.—There is not a large stock on hand, but the demand is good. The discounts are as follows: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent.; machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—The market is firm at the advanced prices of last week. We quote as follows: Round head bright, 82½ per cent.; flat head bright, 82½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—Dealers say the market is daily improving. We quote as follows: Pure manila, 14c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 10½c.; single lathyarn, 10c.

BUILDING PAPER.—A fair demand is reported. We quote: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c per roll; 3-ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 55c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—The market is active and shows signs of an increase in prices. The ruling price is 41.40 per 100 square feet.

FIREBRICKS.—The market shows a decided improvement over last week. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—A few orders were booked during the week, but as yet the market is quiet. We quote as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

COAL HODS.—There is nothing doing in coal hods, as the season is about closed. Our quotations are now as follows: Japanned, 16-in., $4.50 per doz.; 17 in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16 in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

FIRE SHOVELS.—Discounts are: No. 70, 38½ to 40c. per doz.; No. 55, 55 to 60c.; No. 57, $2½ to 90c.; No. 60, $2½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

LANTERNS.—There is only a small inquiry for lanterns and the prices are steady. Our quotations are as follows: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7.00 per dozen; dash board, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; copper-plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

SHOT.—A fair trade is doing in shot. We quote as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 108 lb.; chilled,

METALS.

The market is more steady than it was a week ago. The copper market is still strong, but no further advances have taken place. Ingot tin is a little easier than last week, and the price is about ½c. per lb. less. The market generally is brisk, and an exceptional big demand is noted in bar iron, pig iron, copper, tin and terne plates. Canada plates are reported to be very firm, but no immediate advance is looked for. There are very few changes to note in regard to the foreign markets, and the demand for most metals is good. A letter received by a Montreal agent from England, under date of March 12, reads as follows: "The market is in a rather unsettled condition, in expectation of a strike on the part of the coal miners, which, if it occurs, would materially advance prices."

BAR IRON.—There is only a limited supply to be had, and the demand is heavy. We quote: Merchants' bar, $2; horseshoe iron, $2.25 and forged, $2.30.

BLACK SHEETS.—A good movement is reported in black sheets at the following prices: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50.

GALVANIZED IRON.—The demand is brisk and no further advances have been reported. We quote: 28, Queen's Head, $4.50; Apollo, 10¾ oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand, $4.05. For less than caselots 25c. extra is charged.

LEAD PIPE.—There is a good trade doing in lead pipe at unchanged prices. Our quotations are as follows: Composition and waste, 8c. and ordinary, 7c. The discount is 30 per cent.

IRON PIPE.—Several orders are being booked for shipment after the opening of navigation. We quote: Standard pipe per 100 ft., in lengths under 19 ft.: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1 in., $5.20; 1¼, $7.35; 1½, $8.95; 2 in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85; ¾, $5; 1-in., $7.20; 1¼, $10.05; 1½, $12.20; 2 in., 116.85. Extra heavy pipe, plain ends, are quoted per 100 ft. as follows: Black, ½, $4.20; ¾, $5.25; 1 in., $7.55; 1¼, 110.55; 1½, $12.75; 2-in., $17.60. Galvanized, ½, $5.20; ¾, $6.65; 1 in., $9.55; 1¼, $13.25; 1½, $16; 2 in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—The market is steady at last week's advanced prices. We quote: Coke, $4.25 to $4.50; charcoals, $5 to $5.25.

SOIL PIPE AND FITTINGS.—Orders are being received by every mail, but mostly to be shipped after the new freight rates take effect. Discounts are: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6 inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.; extra heavy fittings, 8 inch, 45 per cent.

PIG IRON.—Considerable difficulty is being experienced in filling orders. We quote: $32.50 to $34.50 ex-store Montreal.

OPEN HEARTH STEEL

INGOT COPPER.—The market is very easy, and no further advances have been made. We quote $15.50 to $15.75 per 100 lb.

INGOT TIN.—The tin market is easier this week, and is 1c. cheaper than last week. We quote $33 to $33.25 per 100 lb.

PIG LEAD.—There is a firm feeling existing and there is a tendency to further advance the price. We quote carlots at $3.50 and less than carlots at $3.75.

STEEL.—A fair trade is reported and an advance in the prices is daily expected. Quotations are as follows: Mild, $2.05; sleighshoe, $2.10 to $2.20; tire, $2.15 to $2.25; spring, $2.85 to $3; reeled machinery, $2.75 to $3; toecalk, $2.60 to $2.75; machinery (iron finish), $2.10; mild steel, $2.05; square harrow, $2.15.

TOOL STEEL.—There is a brisk demand for tool steel for delivery after the opening of navigation. Quotations are as follows: Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade; Jessop's, 13c.; Leonard's, 7½c; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES.—The prices are very firm in England, and the demand is brisk. Our quotations are as follows: 52s $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—There is a very firm feeling in terne plates. We quote the price at $7.75.

COIL CHAIN.—The business in this line is good, and the market is steady. The discounts are quoted as follows: No. 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼-in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25; ⅜, $4.25; 7-16, $4; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75; ¾, $5 to $5.20; ⅞, $3.30; 1-in., $3.15 to $3.25. In carlots an allowance of 10c. is made.

SOLDER.—A good movement is reported in solder. We quote: Bar solder, 20c. and wire solder, 19c.

ZINC SPELTER.—A further advance is reported in this line. We quote $6.25 to $6.50.

SHEET ZINC.—There is not much doing in sheet zinc, but the market is firm. We quote $6.75 to $7.

SCRAP METALS.

On account of the bad state of the roads in the country very little scrap metal is coming to hand. The market, however, is firm, and dealers report a good lookout for spring. Copper is scarce and the demand shows somewhat of an improvement over last week. Our quotations are as follows: Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2¼ to 2¾c.; iron, No. 1 wrought, $17 to $17.50; No. 2, $7.50 per ton; machinery scrap, $17.50 to $18; stove plate, $13; malleable and steel, $6; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

HIDES.

There has been an advance of 1c. in the price of calfskins since our last report. We quote as follows: No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c. Calfskins, 9 to 11c. and lambskins, 75c.

RAW FURS.

The March sales commenced this week in London. Reports have not been received yet as to the changes in prices, but these will be known next week. Offerings during the season have been fairly good, and dealers do not look for any marked advance in prices. They, however, refuse to admit that prices are to be lower. Quotations are fairly high at present, though, and a big reduction would surprise no one. We quote:

MONTREAL NOTES

Ingot tin is 50c. per 100 lb. cheaper this week.

Sheet zinc is about 25c. higher than last week.

There has been an advance of 10 per cent. on harvest tools.

ONTARIO MARKETS.

HARDWARE.

Toronto, March 27, 1902.

THE spring rush has set in fully ten days or a fortnight earlier than usual. Retailers all over Ontario are sending in requests for immediate delivery of orders booked for April delivery. It is expected, too, that navigation will open early, and many orders are coming in from Manitoba and the Northwest for delivery as soon as water freights can be secured. As prices are well maintained all along the line, buyers do not hesitate to place orders, except in a few lines like screen doors, stocks of which in retailers' hands are believed to be large. It is quite evident from the size of orders coming in that retailers are, as a rule, looking forward to a season of unusual activity in manufacturing circles and in building operations, and to increased buying on the part of farmers. The discount on harvest tools has been reduced 10 per cent., now being 60 off. An advance in building paper is freely predicted. The reduction of discount in screws has accelerated buying, as there is a feeling that prices may again go up. The advance in shot and lead pipe has been firmly held to.

BARB WIRE.—Retailers are asking for immediate delivery of this line. Orders have been larger than usual. Prices are steady. The base price is quoted as follows: $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE.—The volume of business continues larger than usual so early in the season. Prices are steady. We quote: Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb.; No. 9, $2.50; No. 10, $3.20 to $3.40; No. 11, $3.25 to $3.45; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75 to $3.95; No. 15, $4.30; No. 16, 14.55. Nos. 6 to 9 base from Cleveland are quoted at $2.27½ in less than carlots.

SMOOTH STEEL WIRE.—Orders are coming in steady, while retailers who have placed their orders are seeking delivery. The result is a larger volume of business than usual. Prices are unchanged, and seem likely to continue so. The base price is $2.50 per 100 lb. Oiling 10c.; coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—An excellent demand is noted. The prices are firm. We quote: $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—Shingle nails are selling fairly well, but larger sizes are not much asked for. We quote $2.50 per keg.

HORSE NAILS.—There are a few going out, but trade is not brisk, and the discounts are quoted as follows: "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent. and "Countersunk" head, 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—Prices are firm. There is not much doing. Quotations are as follows: Iron shoes, No. 2 and larger, light

medium and heavy, $3.45; snow shoes, $3.70; light steel shoes, $3.55; feather weight (all sizes), $4.95; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70; snow shoes, $4; light steel shoes, $3.80; featherweight (all sizes), $4.95.

SCREWS.—Buying has been brisk since the recent advance, as it is believed that prices will go still higher. We quote: Flat head bright, 87½ per cent. discount; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—The activity continues, particularly on account of orders on city account, though a generous demand is noted from all sections. Prices are firm. We quote: Iron rivets, 60 and 10 per cent. discount; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs alone, 30 and 10 per cent.

BOLTS AND NUTS.—Several large orders have been received by local jobbers, while general trade keeps active. Quotations follow: Carriage bolts, common ($1 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2 3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—While manufacturers are kept busy as possible in filling orders, retailers are, it seems, getting deliveries freely, as some of the jobbers are well stocked. Prices are steady. Discount is 45 per cent. and the list price has been reduced $3 per doz. for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—A fair business is doing. Prices are steady, and our quotations are as follows: Pure manila, 14c.; British manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3 cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—The discount, which last week was 60 and 10 per cent., is now 60 per cent., the extra 10 off having been withdrawn. Business continues active, though the most of the trade got their orders in ahead of the rise. Business in this line has been especially heavy this season, both on Ontario and Northwest account.

CARPENTERS' TOOLS.—The discount on rules has been reduced to 55 per cent., the extra 10 off having been withdrawn. Other lines of carpenters' tools are firm, though there is no change as yet.

LAWN MOWERS.—The trade are beginning to ask for immediate delivery, as there is an impression, which seems to be well founded, that manufacturers will have trouble this year in meeting the demand. Prices are unchanged. Our quotations are as follows: Woodyatt, 12 in. wheels, $5.50; Daisy, 12-in. wheels, $4.90; Philadelphia, 10-inch wheels, $6; Ontario, 10-inch wheels, $12.75. The discount is 50 per cent.

BRASS RODS AND TUBES.—The activity is well maintained. Prices are still steady. Quotations are as follows: Tubing, 3-16, 50c.; ¼, 35c.; 5-16, to 2 in., 28c. Pipe, ¼, 35c.; ⅜, 28c.; ½ to 3 in., 25c.

BUILDING PAPER.—Business has been unusually large, as building operations all over the country are reported active. An advance is expected. Our quotations are as follows: Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll; dry fibre, 55c. per roll; tarred fibre, 60c. per roll.

RANGE BOILERS.—An excellent trade continues. Prices are steady. We now quote: 18 and 30 gal., $5.50; 35 gal., $6.50; 40 gal., $7.50; 52 gal., $12.50; 63 gal., $19; 82 gal., $23; 100 gal., $31 and 120 gal., $37.

SCREEN DOORS.—Business is backward as the trade is evidently well stocked, and our quotations are as follows: Screen doors, common, two or three panel, walnut stained, 4-in. style, $6.80; stained, yellow or green, $7; in natural colors, oil finish, $8.15; 3-inch style, 20c. per dozen less.

CEMENT.—There have been several large contracts made, but the bulk of the business is coming from all over the country for building operations of every description. As the Canadian production is not nearly sufficient to meet requirements, importations have been large. We quote: Canadian Portland, $2.40 to $2.50; German, $2.30 to $2.60 and hydraulic, $1.50.

METALS

Business continues to be of particularly large volume. The demand for practically all metals has considerably exceeded that of last year, which was above the average. Prices are steady locally, except for a decline of 25c. in tin. The British and United States markets, however, show a considerable break in copper, tin and spelter. Iron, steel and lead keep firm, though the United States iron market does not exhibit as much strength as it did a few weeks ago. Brass has advanced 5 per cent. in consequence of the present high price of copper.

PIG IRON.—The German and English iron markets continue firm. In Germany there is a better domestic consumption than has been the case for some years. The English market has been strengthened by the large purchases on American account. The United States market keeps steady, but there does not seem to be the disposition to place orders for half a year ahead, as has been done freely within the last year. Canadian furnaces are offered more business than they can handle, so are maintaining prices firmly. There is little No. 1 offering, but No. 2 can be had at $22.50 to $22.75. No. 2 Summerlee continues steady at $25 on track Toronto.

STEEL BOILER PLATES.—The advance noted last week is maintained, a good demand being reported. We quote $1.96 f.o.b. Toronto.

TOOL STEEL.—There has been a steady demand. Prices are fairly well maintained. Our quotations are as follows: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MACHINERY STEEL.—A fairly good trade is reported. Prices are steady at $2 to $2.05 f.o.b. Toronto.

BAR IRON.—There is a fair trade doing, much of the trade being secured by importers. We quote as follows: $2.05 for extras, cut to length while rolling; 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS.—Prices are [illegible] good. The demand, which has been considerably larger than last year, keeps good. Our quotations are as follows: Common $3.15 for 28 gauge and [illegible] flat, $3.50 for 26 gauge.

CANADA PLATES.—Business has kept well up to last year and is now improving. Prices are firm. We quote: All dull $2.90 to $3; half-polished $3.05 to $3.10 and all-bright, $3.15 to $3.25.

THE ROOF

Gets the worst of it.

There's no shelter for it. It shelters the rest from the elements. That's why every one needs the very best shingles.

EASTLAKE SHINGLES

are absolutely fire, lightning, rust and leak proof, and easy to apply.

They've long since been proved the most reliable, perfect and longest-lasting kind to be found.

With them in stock you're certain of satisfied customers and increased business.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

GALVANIZED SHEETS.—The demand for this line has kept up a steady expansion throughout Canada during the past few years, owing to the variety of new uses to which it is being put. The improvement in quality has been such that it is now being used almost in competition with copper. The increased use of acetylene has added to the demand for it for the construction of apparatus, tanks, etc. Prices are firm, as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.50 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN.—The English market has declined steadily during the week, the United States market is lower in sympathy, and a reduction of 25c. is noted here. We quote $33 to $33.50. Lower prices are looked for, owing to the strong statistical position of tin.

TINPLATES.—The demand is improving, as the English market is firm and there is no expectation of any change here for some time. The volume of business to date has been materially larger than last year. We quote as follows: Charcoals, $4.75 to $5, and cokes, $4.25 to $4.50 per box.

COPPER.—Buyers are still holding off, as there seems to be a tendency toward a reaction from the big advances noted of late. Though producers state that they have orders to last them for some time to come there is a general feeling that the man who waits will get the best figures. When it is considered that some mines in the United States can profitably produce copper at 6 to 6½c., it is not to be wondered at that buyers are shy of the present prices. We quote: Ingot copper, [illegible] and sheet copper $22 to $23 per 100 lb.

BRASS.—Owing to the advance in copper the discount is reduced to 10 per cent. It was 15 per cent. last week.

LEAD.—Business continues excellent. The firmness in the outside markets is reflected here. Quotations are as follows: $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE.—Prices are steady. The season has been and promises to be a brisk one, owing to the activity of building operations. Quotations are: Per 100 ft.: Black pipe, [illegible] in., $3.25; ¼ in., $2.40; ⅜ in., $2.65; ½ in., $2.85; ¾-in., $3.65; 1 in., $5.20; 1¼ in., $7.35; 1½-in., $8.95; 2 in., $12.55; 2½-in., $21; 3 in., $25; 3½ in., $32; 4 in., $38.

ZINC SPELTER.—Unchanged. Prices are somewhat higher than a year ago, but there seems little prospect of reductions. We quote 6¼ to 6½c.

ZINC SHEETS.—The market continues to stiffen as stocks are light. We quote the base price as follows: Cask lots, $6.75 to $7 and part casks, $7 to $7.25.

SOLDER.—A fair amount of business is being done. Prices are stiff, owing to the higher value in tin. Guaranteed half and half is quoted at 18 to 19c. and wiping at 17 to 18c.

OLD MATERIAL.

There is an excellent demand and prices are higher all along the line in sympathy with the advance in pig and ingot metals. We quote as follows: Heavy copper and wire, 12c. per lb.; light copper, 10c. per lb.; heavy red brass, 10c. per lb.; heavy yellow brass, 8¼c. per lb.; light brass, 5½c.; lead, 2¾c.; scrap zinc, 3c.; iron, No. 1 wrought, $13 per net ton; No. 2, wrought, $5; machinery cast scrap, $16; stove plate, $11; malleable and steel, $7; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

PETROLEUM.

The demand keeps up fairly well. Prices are unchanged. We quote as follows: Lily White, Canadian, 18c. in bbls.; Silver Light, American, 19½c. in bbls.; Crystal Spray, water white, American, 21c. in bbls.; Pennoline, best American imported, 22c. in bbls. In bulk, 2c. less.

SEEDS.

The seed market remains much the same. The demand is fairly good in all lines. The prices remain unchanged. We now quote: Red clover, ex warehouse here, $6.30 to $8; alsike, ex warehouse here, $5.25 to $8.50; Timothy, ex warehouse here, $2 to $2.75.

HIDES, SKINS AND WOOL.

WOOL.—The market remains the same as last week. The demand for calfskins is still good. The hide and wool markets remain weak. There is no change in the prices.

HIDES.—No. 1 green, 7½c.; No. 2 green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS.—Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.; sheepskins, 80 to 90c.

WOOL.—Unwashed wool, per lb., 8½ to 9c.; fleece wool, 16c.; pulled wools, super., per lb., 15 to 17c.; ditto, extra, 19 to 20c.

TALLOW.—Tallow is very scarce. We quote 5¾ to 6c. per lb.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."
London, March 25, 1903.

NOTHING very interesting can be written this week regarding the hardware and metal trade. All factories making goods of metal, and such articles as wringers, churns, handles, etc., report business in full swing. A good average trade has been done during the past week, and all have hopes of big April business should the present fine weather continue. Paints, oils, varnishes and brushes, and all similar goods used by painters, are in demand, and the retail hardware stores have the various brands of paints neatly arranged in their front windows, reminding builders and the general public that house cleaning season is drawing nigh.

* * *

The stained art glass made in this city is receiving a large share of attention from outside. Many important contracts for churches, banks and public buildings over Canada are now finding their way here. It is not so very many years ago that all high-grade art glass was imported from the continent of Europe. London church glass artists are deserving of any notice we can take of them in our journal.

* * *

Wright & Co., whose business is almost entirely with carriage-makers and blacksmiths, are shipping fair orders this week to the North-West Territories and British Columbia. They say that trade out there is gaining in volume every year.

The Dennis Wire and Iron Company, who will go into larger and more convenient quarters this summer, have not definitely arranged the size of the new factory, but will be able to make public all particulars in a few weeks.

* * *

Jas. R. Elliott, formerly of this city, is the new manager of the Wills - Elliott Manufacturing Co. of Port Huron.

Messrs. Searles and Lynes of Norwich, Ont., have sold out the hardware part of their business.

* * *

Some of the manufacturers are kicking and stoutly aver that the water commissioners of this city are using them unfairly. For years their hydraulic elevators have been operated with the use of city water, but this is no longer to be allowed. The manufacturers claim it will cost each of them $1,000 to put in electric elevators, and that the commissioners are trampling on their vested rights. The end is not yet.

* * *

James Barge, at one time a prominent manufacturer and railway contractor of Western Ontario, died at his residence in Windsor, Ont., Saturday evening, at the advanced age of 83 years.

* * *

The commercial travellers of the "Forest City" have made preliminary arrangements for their annual picnic. It will be held at Port Stanley on Saturday, August 10. The drummers always aim to make this event of unapproached record, and, judging from the energy and interest already shown, the travellers' picnic of 1903, will eclipse in every respect any hitherto held. The committee appointed are of the ablest men available. Every man is a host in himself, and they will form the general and supervisory committee; finance committee; railway and transportation committee; sports' committee; refreshments' committee; music committee and reception committee. All are putting their shoulders to the wheel—and they'll make it go.

Mr. C. D. Strange, of Barrie, Ont., spent a few days in London this week in convention with other members of the Order of Chosen Friends. While in the "Forest City" he visited the head office and works of the McClary Manufacturing Co.

Mr. McTaggart of Mosscrop, B.C., spent a few days this week in London visiting his uncle, Mr. D. McTaggart. He also spent considerable time at the offices and works of the McClary company. Mr. McTaggart reports that while the hardware business in the West is at present quiet, owing to the labor troubles, the prospects are bright, and that the territory surrounding Mosscrop is sharing in the general prosperity of the country.

NOVA SCOTIA MARKETS

Halifax, N.S., March 23, 1903.

THE hardware trade continued last week in the very active condition which has prevailed for some time, and unlike other lines, does not seem to have been affected by the prevailing bad weather. The conditions prevailing are very satisfactory and the prospects continue good for a large volume of trade this spring

* * *

The hardware trade this season, especially in the line of builders' materials,

has been worked ahead just about one month. Usually, spring orders are shipped by April 1, but this season there has been a general call for delivery by March 1. It is said that the reason is, that in anticipation of an early or at worst, an open spring, building operations in many places were planned to commence by March 1, and the country dealers had to be prepared for the earlier date. This may result in a little slackness of business during April, but otherwise will not affect general trade.

* * *

The most notable changes in the market are an advance of 25c. in ingot tin, and advances in spelter, zinc and sheet lead. There has been, and all through the season there is likely to be a large demand for these as plumbers' supplies, and the advance may seriously affect large contracts already made. The quotations on all plumbers' supplies have been firm for some time, and as the demand has been quite heavy, the large stocks are considerably reduced and the advance noted will come in force. It may be noted that though the Canadian manufacturers advanced the price of screws 10 per cent. some two weeks ago, the Maritime Association has decided to stand by the old quotations for the present.

* * *

A large number of fishing and coasting vessels have already been in from the westward, fitting out for the season's work, which has resulted in considerable activity with the hardwaremen who make a specialty of shipping supplies and fishermen's outfits. This week the eastern ports are reported open and the vessels are expected from that direction shortly. There will be another week or ten days' activity in this line and then will come a slack period until later in the season.

* * *

Those who deal in mill and mining supplies report considerable activity in these lines. New mines are being equipped or old ones refitted with more modern machinery. There is also a good demand in general lumbering supplies, as many operators continue quite as active in this line during the summer as during the winter season. In fact, the work done during the summer, the manufacturing of the logs into lumber, requires more in the hardware line than the general run of winter work.

* * *

Halifax has lost an energetic hardwareman by the death of George H. Richards, which occurred after only a few days' illness, on Monday evening last. Mr. Richards was a valuable and popular traveller for the firm of H. H. Fuller & Co. for a number of years. On the decease of Mr. Fuller the firm was reorganized and Mr. Richards became a partner. The deceased contracted a heavy cold which developed into pneumonia. Previously he had enjoyed the best of health.

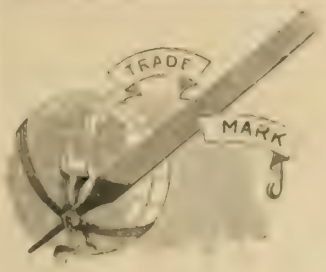
R. C. H.

MANITOBA MARKETS.

WINNIPEG, March 23, 1903.

TRADE is good, although it has been somewhat hampered by the strike. At present this applies largely to the sending out of less than carlots, as cars have been taken fairly well, though as to how many have actually left the company's yards there is considerable doubt expressed. The most important change of the week

"GLOBE" BRAND Files and Rasps



Manufactured from high-grade Crucible Cast Steel, by experienced mechanics

Every file carefully tested, and warranted.

ALL CUTS — ALL SHAPES. — ALL SIZES

FOR ALL PURPOSES.

Sold by all prominent Hardware Merchants, from the Atlantic to the Pacific.

Manufactured by

Head Office: LIVERPOOL, ENG.

[illegible] the sharp advance on screws, it [illegible] be [illegible] per cent., but the [illegible] are not yet fully decided on.

Portland cement, that very important item in our building operations, shows an advance of price for the season, and is now quoted at [illegible], according to brand.

In paints, oils and glass there are a few changes. The glass market is at present practically an open one, so far as window glass is concerned. Turpentine is still 97c. per gal., and $1.02 for less than barrel lots, which was the price quoted last week, I think. Castor oil is now 10c., as against 11c. previously quoted.

We quote as follows:

IN THE FRONT RANK.

A [illegible] is directed to the advertisement of W. Gilbertson & Co., Limited, South Wales, which appears in this issue. Alexander Gibb, of Montreal, is the sole selling agent in Canada for their lines, and since he has had charge of the agency the business in Canada has increased year by year, until it now represents quite a large tonnage, and still gives evidence of rapid growth. The "Comet" brand, galvanized sheets, are taking a prominent place on the market, while "Comet" galvanized Canada plates, which the firm began to manufacture only last year, seem acceptable to buyers. Gilbertson's black sheet plates, for enamelling and deep stamping purposes, are considered among the best that come to this market. The Gilbertson electrical sheets, and dark blue finish in imitation Russian sheets are both meeting with a great demand.

Mr. Gibb also represents The Standard Chain Co., of Pittsburg, Pa.; The Ansonia Brass and Copper Co., of Ansonia, Conn., and other great manufacturers, for all of whom he has worked up a large business on this market. He is looked upon as one of the most successful manufacturers' agents in Canada.

THE KENNEDY HARDWARE CO.

The Kennedy Hardware Company is the name of a new wholesale and jobbing hardware house which will shortly be looking for business throughout the Dominion. The new company has its headquarters at Toronto, and has secured commodious premises at 47 Colborne street, where they are putting in a most complete stock of all that goes to equip a well-regulated hardware store. The building occupied by the firm comprises four storeys with basement, including easy shipping room, neat offices, etc. A new house always has an advantage in the fact that its stock is entirely new and everything chosen from the most modern goods.

The new company is composed of experienced and capable men. The president, S. R. Kennedy, is a gentleman who has been connected with the trade for a number of years, while J. J. McLennan is the able secretary of the company.

CANADIAN STEEL CORPORATION.

Notice of application for the incorporation of The Steel Corporation of Canada has been given at Ottawa by Johnston & Falconbridge of Toronto. The notice, says The Toronto News, portends what will likely be the establishment of one of the largest and most important industries of Canada. E. F. B. Johnston, K.C., was asked as to the particulars of the new enterprise. He declined, however, on the score of professional etiquette, to state the names of any of the capitalists interested or to give details of the scheme. He merely stated that there was a large amount of capital behind the scheme, and that the plans were still incomplete. It is learned that the new company will operate near the Welland Canal, where options have been obtained on some properties. It is not connected with The Dominion Steel Corporation. It is stated that the capital of the new corporation is $20,000,000. In about six weeks' time particulars will be published of the undertaking.

INGERSOLL WATCHES.

We have great pleasure in introducing to the hardware trade of Canada this well-known line of watches, which for price, durability and accuracy cannot be equalled. They are as staple and easy-selling when once introduced as three-inch nails. All that is required to do is to place this line in the window on the free display fixtures furnished by this company and the goods sell themselves. This firm appreciates the merchant's position and gratuitously furnishes attractive advertising matter to assist and promote the sale of their goods, thus making the merchant's work easy. When you consider that this watch is guaranteed for one year and sells at a price usually charged to repair an ordinary watch, one is not astonished at their great demand. It is naturally a great favorite with boys, sportsmen and physicians and all persons who give watches hard usage; 50,000 merchants in the United States are selling these goods and we commend them to all our friends who desire a profitable, easy-selling and satisfactory side-line. This company will be glad to send special circulars, catalogues, etc., to the trade in Canada.

EXPORT TRADE IN SCALES.

VALUABLE as the official trade returns are, they do not reveal all that is being done in the way of foreign trade, and particularly in the matter of exports. For example, nothing is said in the Trade and Navigation Returns in regard to the export trade in scales, yet quite a little business is being developed in that line of goods. The Gurney Scale Co., Hamilton, Ont., may be cited as a proof of this. This firm is gradually working up a nice foreign trade, and yet nothing appears in the official returns regarding it. At the present time they are not only busy on orders on Canadian account, but they also have a number for shipment to Ireland, Russia, Cuba and Mexico. The scales being made for the foreign trade are of different standard and weight from those used in Canada, most of them being constructed to weigh in two standards.

The attention which the Gurney Scale Co. gives to the foreign trade may be gathered from the following paragraph, which appears in the firm's catalogue, namely:

Scales will be constructed to indicate weights used in any part of the world, and all platform scales with iron weights, if so ordered, will be made without extra charge to weigh to any two standards of weight desired. In ordering, it is very important to specify the standard of weight desired for each scale.

CURRENT MARKET QUOTATIONS.

March 27, 1903

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire is to make it perfectly accurate.

Satisfactory Wrapping Paper.

Our brown and manilla papers are the right kind for store use. They do not tear easily and are strong, durable and of good weight. It is better to have a reliable paper than a cheap one.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker of mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. **Correspondence Invited.**

WILL IT PAY?

SINGLE FIRST FLOOR OUTFIT

Every business transaction is weighed by one standard.

Will It Pay?

If you handle ***oil of any kind*** and are considering the purchase of a

BOWSER
Self-Measuring
OIL TANK

Let us ask you a few questions

Is it worth 10 cents a Day to handle your oil without waste?

Is it worth 10 cents a Day to sell your oil without loss of time and labor?

Is it worth 10 cents a Day to have no leaky dirty measures and funnels to handle?

Is it worth 10 cents a Day to keep your oil room neat and clean?

We might propound a hundred questions equally as pertinent. If any one of these is worth 10 cents a day, is not the combination of the many worth more than the cost of a **Bowser Self-Measuring Oil Tank,** which will give you all these advantages.

Let us give you full particulars. **Ask for Catalogue "A."**

VOL. XV. MONTREAL AND TORONTO, APRIL 4, 1903. NO. 14.

COUNTRY ROAD SYSTEMS.

By A. M. CAMPBELL, Commissioner of Highways.

ONE of the most important developments of the good roads movement in Ontario has been the appropriation of $1,000,000 by the Legislature to aid in the improvement of country roads. The motive for this step has, very largely, been to encourage county councils to assume the management of the most heavily-travelled roads in each county, thereby forming them into one class, in the construction and maintenance of which the most efficient superintendence, plans, methods and machinery can be employed. One third of the cost of constructing or reconstructing the roads assumed under a county system will be paid by the Provincial Government, and the Act is so framed as to give county councils the first opportunity to accept this aid. Should any counties fail in this, a proper proportion will be given to townships fulfilling certain prescribed conditions. A sufficient period has not yet elapsed to permit an estimate of the extent to which the Act will perform its mission, but at the present time county councils are everywhere interesting themselves in the matter.

By-laws under this Act have passed all stages in Wentworth, Simcoe and Lanark; the Wentworth by-law including the purchase of all toll roads within the county. Hastings and Wellington already have systems of county roads which they propose to bring under the Act. Action towards systems of county roads has also been taken in the counties of Carleton, Elgin, Oxford, Frontenac, Prince Edward, Lennox and Addington, Huron, Middlesex, Victoria, Essex and Brant.

In Simcoe, one of the largest counties of the Province, the by-law provides for establishing a system of 400 miles of leading roads. This having failed to receive the assent of over two thirds of the municipal councils, as required by the Act, it was submitted to a vote of the rate-payers and carried by 1,457 majority. The Wentworth by-law was the first to be fully adopted. This provides for the purchase of 38 miles of toll roads at a cost of $71,000, and the improvement of 62 miles of other roads at a cost of $48,000. The Lanark by-law provides for a total system of 90 miles, upon which they propose to expend $100,000, including the Government grant of $35,000. Of this about 17 miles are now toll roads, which, it is anticipated, can be purchased at a cost of $17,000. The county of Carleton proposes to expend $300,000 on 300 miles of leading roads, including $30,000 granted by the Government, this system to include also the toll roads of the county.

The two counties in the Province which now have well-defined county systems are Wellington and Hastings. The Wellington system comprises 144 miles, to which it is proposed to add 26 miles, and to make a sufficient expenditure in the improvement of these roads extending several years, to avail themselves of a Government grant of $32,000.

The county roads of Hastings are frequently referred to as a practical example of a county road system, they having been maintained by the county for 40 years. The management is vested in a road committee of from five to seven members, appointed at the beginning of each year, by the county council, this committee electing a chairman. The county has a permanent superintendent of roads, whose duty it is to meet, report to and consult with the road committee from time to time, as may be necessary. The superintendent organizes gangs of five to seven men, each under a foreman, for the purpose of constructing roads and keeping them in repair.

Each foreman reports to the superintendent, the superintendent reports to the road committee, and the committee reports to the council. The foremen and men are appointed by the committee, with the advice of the superintendent. The men are given continuous employment for most of the year, dependent on their rendering good service.

Each gang is moved from point to point where work may be needed, and work is done where it is needed the most, with no inducement to slight it. At the same time every ratepayer becomes a road supervisor, for if he finds a man or foreman shirking his work, he at once notifies the council for the division and the matter is attended to without delay.

Under this system the men become skilled in their work and the foreman becomes expert. The superintendent knows all details. The committee becomes conversant with the progress and character of the work done, and with the work needed to be done. Through the committee, the council becomes equally well informed.

Under this system the good roads of Hastings have been extended from year to year. Of first-class gravel roads under the county council there are now over 100 miles, while the influence of these roads on township road improvement has been very great. Every neighborhood has its cheese and butter factory, and good roads are constructed from the main lines to these by the townships. The townships have been relieved of the cost of caring for the main lines of travel, and are in many ways encouraged to perfect their own roads. As soon as the snow is off the ground in this county, the means of communication are as good as in midsummer. The cost of maintaining these roads is about $12,000 annually, or $30 per mile. Bridges are very numerous on the county roads, there being about 100, and $3,000 is raised annually for maintaining these and for extending the county road system. The county has a full

outfit of roadmaking machinery, including a grader, a rock crusher, a traction engine and roller, these alone enabling the county to do much more finished and economical work than can individual townships.

The people of Hastings have every faith in their system of road management, and have no thought of giving up their county roads. These good roads, and the increase of comfort and convenience they have produced, have largely advanced the value of property all over the county. The difference between five and 10 miles to a market has become a matter of little consequence. The agent of The Canada Company states that he values land at the rear end of the county at double the price of almost adjoining lands in the counties of Addington and Peterboro'.

PRODUCTION OF ZINC BY ELECTRICITY IN SWEDEN.

United States Consul R. S. S. Bergh sends from Gothenberg, January 12, 1903, the following translation of an article recently published by a local newspaper:

"Experts in metallurgy have for some time discussed the report that Dr. De Laval, after extensive experiments, has been able to produce zinc from zinc ore by electricity at the factory Onan, belonging to Trollhattans Elektriska Aktiebolag, Trollhattan. It is reported that the manufacture of carbide at Onan has been discontinued and the production of zinc by Dr De Laval's method adopted. An expert states:

"'Dr. De Laval has for several years worked on the problem of producing zinc by electricity from lead-sulphur-zinc ores. He was probably led to this by his experiments in trying to separate iron from ores by electricity. An examining board has reported favorably on the method, and the result has been the organization of a company to exploit the invention and the ore deposits at Saxberget, near Ludvika. The minimum capital 826,800—has already been paid, and the company will start operations as soon as circumstances will allow.'"

SOLDER FOR SMALL LEAKS.

In answer to an inquiry for a solder for tin by using which it is not necessary to use acid or other preparation, in order to stop small leaks in family tinware, an exchange says: "The free flowing solder used by the fakirs is composed of one part lead, two parts tin, one part bismuth. The solder wire is made by flowing the melted solder through small holes in the corner of a square sheet iron ladle at the same time drawing the ladle over a cold flat iron surface. A little practice will give you the necessary conditions for making the solder wire uniform in size."

SENATOR FRANCIS T. FROST.

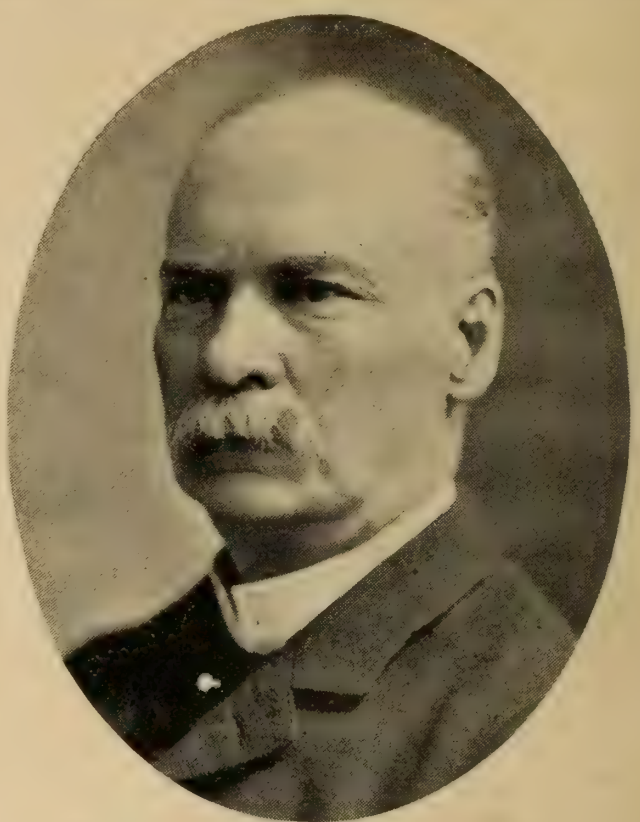
THE appointment of Francis T. Frost, of The Frost & Wood Co., Limited, Smith's Falls, Ont., to the Canadian Senate has won the widespread approval of the business community.

Hon. Mr. Frost belongs to the comparatively small but yet ever-growing number of Canadians, who, by native shrewdness, business capacity and a progressive spirit, have built up from small beginnings industries which give employment to hundreds, and which cover the Dominion from the Atlantic to the Pacific with their agencies.

In 1867, Senator Frost, with his brother, Chas. B. Frost, succeeded to the business of Frost & Wood, founders and implement manufacturers. The business was at that time a comparatively small one, but under the energetic and progressive management of its owners it has steadily increased in magnitude until to-day the company, now a joint stock company, is recognized as one of the foremost implement firms in Canada, and one of the strongest business concerns in Eastern Ontario. In the works in Smith's Falls and in the branch at Oshawa, Ont., over 550 men are employed. The popularity of Senator Frost with his large body of workmen was manifested in a notable manner, shortly after his appointment, when he was leaving with Mrs. Frost for Ottawa. A body of 450 men formed in line and escorted them to the station as a mark of esteem.

Notwithstanding his business activity Senator Frost has ever interested himself in public matters. In 1876 he was elected reeve of Smith's Falls, which position he held until 1883, when the village was incorporated, and he was elected the first mayor of the town. He first ran for Parliament in 1878, when he unsuccessfully contested South Lanark in the Liberal interest. Since that time he has been the most forceful influence in the Liberal party in his district, contesting North Leeds and Grenville on four occasions, holding the seat from 1896 to 1900. In the House, as in his business and social life everywhere, Mr. Frost soon became popular, and was appointed Ontario Whip during his third year.

In his public life, as in his business enterprises, Senator Frost has evidenced a broad, Canadian spirit, so his appointment to the Senate will add to the strength of national spirit as well as to the business acumen in that assembly.



F. T. Frost, one of the recently-appointed Senators.

By courtesy Rideau Record, Smith's Falls.

A REMOVAL.

The Bennett Manufacturing Co., manufacturers of shelf boxes, cabinets, etc., have recently moved into their new offices and show-rooms at 556 Dundas street, Toronto. This company took over the business of the late J. S. Bennett, whose sudden death took place a few months ago. B. F. Bennett is the manager of the new company.

BUSINESS CHANGES.

DIFFICULTIES, ASSIGNMENTS AND COMPROMISES.

A MEETING of the creditors of Joseph Potts & Son, hardware merchants, Dorchester Station, Ont., was held on March 31.

Leopold Leger, contractor, Lachine, Que., has assigned

Thos. A. Collins, oil operator, Oil Springs, Ont., has assigned to Charles Egan.

A meeting of the creditors of Leo. Leger, contractor, Lac Lind, Que., will be held on April 4

The assets of the general business of Blais & Proulx, Ste. Anne de la Pocatiere, Que., are to be sold on April 3.

A meeting of the creditors of Gustave Doucet, carriage maker, St. Angele de la Pocatiere, Que., will be held on April 4.

Joseph Potts & Son, hardware merchants, Dorchester Station, Ont., are offering to compromise at 80c. on the dollar.

McWinnie & Harvey, roofers, Ottawa, have assigned to W. A. Cole, and a meeting of the creditors will be held on April 6.

INCORPORATIONS AND CHANGES.

The Minnatonka Gold Mines, Limited, has been incorporated.

P. Demers & Fils, Montreal, have been registered as hardware merchants.

The Locomotive & Machine Co., of Montreal, Limited, have registered.

The Stanley Mills Co., Limited, Hamilton, Ont., have obtained a charter.

B. I. Spear, general merchant, Oakland, has been succeeded by A. Bell.

C. W. Wainwright, machinist, Virden, has been succeeded by Thos. Mitchell.

Trite, Wood & Co., general merchants, Fernie, B.C., have been incorporated.

J. D. Lacerto & Co., general merchants, Plessisville, Que., have been registered.

The Great West Implement Co., Limited, Edmonton, has been incorporated.

The Bentley Co., Limited, general merchants, Lethbridge, have been incorporated.

Olaf Anderson, general merchant, Selkirk, has been succeeded by J. R. Bullock.

The Duplex Gold and Copper Mining Co., of Maritana, Que., have obtained a charter.

The Grand River Metal Stamping Co., Limited, Galt, Ont., have obtained a charter.

Thom & Fines, general merchants, Darlingford, have been succeeded by R. Fines & Co.

Woods, Limited, manufacturer of lumbermen's supplies, Ottawa, has been incorporated.

A. Lemoine & Frere, general merchants, St. Eugene de Grantham, Que., have been registered.

The Havelock Electric Light & Power Co., Limited, Havelock, Ont., have obtained a charter.

Myers & Co., general merchants, Vankleek Hill, Ont., have been succeeded by Greenspoon Bros.

E. J. Brooks & Co., general merchants, Indian Head, have been succeeded by E. J. Brooks & Son.

The Sherwin-Williams Aluminum Paint.

A Wonderful Paint.

New use found for it daily.

Good Aluminum paint is one of the most adaptable paints on the market. There is a constant demand for it and the dealer should have a line that he can sell with confidence.

The Sherwin-Williams Aluminum Paint is made for that purpose—it gives satisfaction to the man who sells it and the man who uses it.

Our product is particularly adapted for household use, and is also being used to splendid advantage on radiators, steam-pipes, engines, etc., in offices, hotels and factories.

The Sherwin-Williams Aluminum Paint has good covering and working qualities and is extremely durable. Some points of its superiority are velvety lustre, no nauseating odor, doesn't discolor, will stand extremes in temperature, won't blister, scale or crack, and won't settle hard in the can.

It is a line you can push with confidence. There is money and advertising for you in it. Prices quoted and full information given upon request Write to-day.

John F. Fleming, general merchant, Killaloe Station, Ont., has admitted a partner; new style is J. F. Fleming & Co.

SALES MADE AND PENDING.

The Nelson Hardware Co., Nelson, B. C., are selling out.

The McDonell Rolling Mills Co., Limited, Toronto, have sold to The Dominion Bolt & Forging Co., Limited.

FIRES

R. Chestnut and Son, wholesale and retail hardware merchants, Fredericton, N.B., sustained slight damage by fire; loss insured.

FREIGHT SERVICE TO PORT ARTHUR.

A DESPATCH from Port Arthur, Ont., says: "The Northwestern Line steamships will make tri-weekly trips to and from this port during the coming season of navigation. The steamers composing the line will be the Majestic, United Empire and Monarch. The first-named vessel will ply between Sarnia and Port Arthur direct. The Empire and Monarch will ply between Sarnia and Duluth. They will lay at Port Arthur 27 hours discharging and receiving freight, running in connection with the Canadian Northern. These boats will carry freight for Manitoba and the west, and will divert much of that traffic which went to Winnipeg in bond by way of Duluth.

"In addition to the vessels named plying here regularly, carrying package freight, there will be the three vessels of the Montreal-Port Arthur line, making weekly trips. The boats of this line are Arabian, Advance and Wacondah. The Advance has undergone extensive improvements at Kingston. The Wacondah is under construction in Scotland, and is expected to be ready for her regular run fairly early in the season. Then there will be the line of three Old Country built ships, also to ply between Montreal and Port Arthur, carrying package freight. These new ships are designed on the most modern lines, and are being constructed in the capacity of the St. Lawrence canals.

A NEW ASSOCIATION.

The Montreal Wholesale Clerks' Union was formed on March 29. All the details for the formation of the association were not decided upon, and a committee was appointed to look after this and report at the next meeting. A good deal of enthusiasm was shown over the proposed association, and all the warehouse clerks are expected to join.

EARLY CLOSING

The movement for early closing of stores in Montreal is progressing. A meeting was held on Sunday, March 29, by the Early Closing Association, at which it was decided to have the Bill providing for early closing pushed through the Quebec Legislature as soon as possible.

J. B. E. Poirier presided, and in his opening remarks explained the object of the Bill. By it municipalities would obtain power to pass by-laws making it illegal to open before 5 a.m. or remain open after 7 p.m. While many of the stores do now close early in the evening and others not much later, there are some in which the clerks work 17 hours a day.

Several speeches were made by Messrs. G. L. Desaulniers, M. Howard, B. Guenette, F. J. Fortier, F. Dubord and J. A. Jacob, officers of the association. The retail clerks of the city will be asked for subscriptions to forward the movement.

Guerette & Wheeler, general merchants, Notre Dame du Lac, Que., have dissolved, and Guerette continues.

MACHINERY

A SOUND JUDGMENT.

As a rule, the manufacturer of cycle accessories has more to think of these days than the merits of the latest fad in coasters or sprocket gears, and a recent decision of the Birmingham, Eng., county court will not ameliorate the anxieties of that man whose mind is bent upon the establishment of a fittings factory.

John Sansome, a grindstone manufacturer, living on Belmont road, complained of the noise emanating from George Rathbone's shop, on the ground that such noise had impaired the health of Mrs. Sansome and her child.

His Honor, Sir Richard Harrington, in giving judgment, pointed out that no prescribed right to make a noise in this particular place had been set up, otherwise he would have had considerable difficulty in dealing with the case. He had investigated the matter personally, and did not think the nuisance was incident to the locality. He believed in some manner or other the machinery might be altered so as not to emit that fearful buzzing sound, which must be a serious annoyance to anyone who had to endure it all day long. Other factories in close proximity made noises, it was true, but not such an awful whirring. He gave an order that is worth quoting in extenso: "That there be an injunction to restrain the defendant, etc., etc., from making or causing to be made, noise in the factory so as to occasion a nuisance or annoyance to the plaintiffs."

The noise "would always be a question of degree, and if the defendant could continue to carry on his works in such a manner as to obviate any substantial issue of noise, he would not violate the injunction."

The query remains, "What is a substantial issue of noise?" It would seem as if the learned judge had embraced the atomic theory.

MACHINE SHOPS FOR INDIAN HEAD.

A machine shop is now assured to Indian Head. There is room for it. There is plenty of work to keep it busy. It is a necessity. Great inconvenience has been occasioned many times through the lack of just such an institution.

Many of the big foundries, factories, etc., of the east have grown out of the machine shops started in the early days in the then small eastern towns. The machine shop was the nucleus which expanded as the country grew and many of them now form the chief reliance of the towns. To these the young men of the locality go and learn their trade, thus equipping themselves with a means of earning a decent livelihood in any part of the world. What has occurred in the east will occur here. The machine shops and little factories of to-day will be the great big industries of a few years hence. The proprietors will adapt themselves to the country and grow as the country grows, expanding one with the other.—Indian Head, N.W.T., Vidette.

ELECTRICITY ON GERMAN VESSELS.

THE incomparable development of the German shipbuilding industry during the past 20 years has called forth all the ingenuity of the technical engineer, writes United States Consul E. L. Harris, Eibenstock. That Germany to-day possesses the fastest vessels which cross the Atlantic is a triumph due chiefly to the skill of the trained machinist. In no merchant marine is electricity used in connection with all the latest inventions to a greater extent than on German vessels. Its application to the comfort and safety of ocean travel presents one of the brightest chapters in the history of modern shipbuilding.

Hardware retailers in many towns are devoting much attention to machinery and machine tools. Experience has shown that those who make a feature of these goods prove valuable agents and that they find the line a particularly valuable one in connection with the hardware business.

The Kronprinz Wilhelm, the latest express steamer afloat, furnishes the best example of the use of electricity at sea. All the cabins have not only electric lights and call bells, but are fitted up with telephones as well. The first class cabins on the promenade deck and the dining room are heated by 104 electric ovens. Electricity is applied to 40 small and 19 large motors, as well as to many cranes and ventilators.

The power for the motors from which the electricity is derived for lighting and other purposes is engendered by four independent dynamos. Connected with the dynamos are four compound steam engines. Three dynamos are situated behind the engine room between the two huge propelling screws. They are protected by water tight bulkheads and are separated from the engine room and piston rod by solid partition doors. The fourth dynamo is located in a large niche in the engine room, above the water line, and on a level with the main deck.

An interesting feature of the application of electricity on shipboard is the so called Schotten telegraph, or bulkhead telegraphy. In the moment of danger caused by a collision, this telegraph enables the captain on the bridge to see whether all the water-tight doors are closed or not. On board the Kronprinz Wilhelm, there are 40 such doors, 21 of which are electric trap contrivances, which fall into place at a moment's notice. There is a water-tight apparatus joined to each one of these doors, which is connected by wire with a tableau on the commanding bridge. This tableau shows the captain a complete plan of all the decks, and every time a trapdoor falls into place he is apprised of the fact by the lighting of an electric lamp. These lamps are brought into position exactly behind the holes on the bulkhead or plan of the decks, so that a glance is sufficient to show if the doors are closed or not.

In case of danger, the ship's crew receives the alarm by means of 36 electric bells, which are distributed throughout the vessel. These bells are divided into two electric-current circles. The 12 bells of the first division are located in the boiler, machine, dynamo, and steerage rooms—that is, in every place where a water-tight trapdoor is situated. The 24 bells of the second division are located throughout the entire ship and serve to summon the whole crew when necessary. The alarm apparatus is fed with 100 volts directly from the engine room. The whole outfit was constructed especially for the Kronprinz Wilhelm, and is entirely waterproof in every respect.

The fire-alarm signals are similar to those above described. The moment a fire breaks out, it is exactly located on a chart in the pilot room by means of an electric lamp. There are 13 electric fire alarms distributed throughout the ship.

The entire electric outfit on board the Kronprinz Wilhelm was put in by the Union Elektricitats Gesellschaft, in Berlin. It took 70 men six months to complete the work.

THE FAIRBANKS COMPANY

SOLE CANADIAN AGENTS,

MONTREAL WINNIPEG VANCOUVER

MACHINERY AND ELECTRICAL NOTES.

The Strathroy, Ontario, Furniture Co., are installing new machinery in their factory.

Dyesdale & Co., Edmonton, N.W.T., have installed an electric motor and pneumatic hammers in their works.

A new electric light plant will be installed at Watford at a cost of $7,500.

The Frontier Lumber Co. have been appointed Canadian agents for the "Olds" gasoline engine.

Two No. 2 Petrie cooking and heating boilers were shipped to the Laurie Engine Co., Montreal, Que., by H. W. Petrie, Toronto.

Harold S. Crowell, manager of the Burrell-Johnson Iron Co., Yarmouth, N.S., made a trip to Canning a few days ago, and secured a large order at that place.

Two No. 19 and one No. 21 Crosby power presses were purchased by the Eclipse Office Furniture Co., of Ottawa, from H. W. Petrie, Toronto.

A 24 x 24 x 6½ ft. London iron planer and a 20 in. G. A. Crosby & Co. upright drilling machine have been installed in the plant of the Canada Radiator Co., Port Hope, by H. W. Petrie, Toronto.

An entire machine shop outfit consisting of a 24 in. x 10 ft. London engine lathe, 20-in. Barnes drilling machine, portable forges, emery stands, and all the necessary shafting, hangers, pulleys and kindred supplies, was purchased from H. W. Petrie, Toronto, by L. C. Adams, of Penetang, Ont.

The boiler-makers and helpers of the Leonard foundry, London, Ont., asked for an increase in wages on April 1. The demand of the boiler makers was met, but that of the helpers refused, with the result that both boiler-makers and helpers, some 75 men, have gone out on strike, the former having struck work in sympathy with the latter.

The Pure Milk Corporation Co., of Hamilton, have placed a No. 2 Jewel automatic engine in their establishment. The Jewel engine has earned a reputation throughout Canada as being one of the most economical, reliable and durable means of transmitting power. This engine was purchased from H. W. Petrie, Toronto, who is the Canadian representative.

LARGE SALES OF MACHINERY.

The Fairbanks Company, Montreal, have recently furnished the following machinery.

Montreal Heat, Light & Power Co.—One 3-ft. American Tool Works radial drill; one 26 x 48 McCabe double-spindle lathe; one 8 in. Bement slotter; one 14 in. LeBlonde lathe; one 26 x 26 x 8 ft. American Tool Works planer.

James Cooper Mfg. Co., Montreal, one 2 x 26 Pratt & Whitney new model turret lathe; one 24-in. LeBlonde turret lathe; one 26 in. Gisholt turret lathe; one Pratt & Whitney cutting off machine; one 20 in. R. McDougall engine lathe.

Canada Switch & Spring Co., Montreal, one 12 x 24-ft. Pond heavy pattern engine lathe; one 24 in. LeBlonde turret lathe.

Canadian Pacific Railway.—Two Pond and one Niles locomotive car-wheel lathes.

J. Inglis & Sons, Toronto.—One 25-ton Niles Bement electric crane.

Carriere, Laine & Co., Quebec.—Two 15 in. Crosby engine lathes.

The Fairbanks Company is certainly to be congratulated on the splendid success which they are meeting with in connection with their machine tool department, which has only recently been established. They are aiming to supply only the highest grade of tools, and report that manufacturers are looking for tools which will give a maximum amount of product and thus reduce the cost of production. They will gladly forward catalogue of any machine tools to any one who is in the market.

A WINNIPEG MACHINERY PLANT.

THE Stuart-Arbuthnot Machinery Company, of Winnipeg, has become The Stuart Machinery Company, Limited. The firm possesses one of the finest plants in the Dominion, and the demand for machinery in the West is so great that there is no idle moment in the working year of this up-to-date concern.

A recent contract for 750,000 ties was placed by the C.P.R. with the East Kootenay Lumber Company, Cranbrook, and the Stuart Machinery Company are busy constructing the machinery to complete this order.

A visit to the shops of the Stuart company is well worth the time it involves, and goes far to show that Canada is in the van of progress in the building of modern machinery.

Labor-saving devices are the order of the day, and one cannot but be struck with the number of automatic contrivances utilized in every department.

In earlier days, the man who could drill four holes per hour in a boiler plate, was considered an expert; in the modern machine-shop, it is a poor machine that will not cut out 30 in an hour with unerring accuracy, and in the Stuart shops 40 or more are demanded of the boring machine, and the demand is met every time.

Cutting key-seats in hardened steel shafts is no child's play, yet the machines in the Winnipeg shops will do more work along this line in an hour than a skilled workman could accomplish in three or four days.

Screw cutting is an exact mechanical science, and when one sees threaded bolts turned out by the dozen, apparently with as much ease as one would pare an apple, it becomes a hazardous mental speculation as to what is the limit of mechanical possibility.

Within the past half century, electrical engineering has passed from the experimental to the commercially utilitarian stage, and if one needs uncontrovertible testimony to the superseding of other methods of power-transmission by electricity, that need is supplied by a peep into the Stuart electrical department, where armatures are being wound by the dozen; dynamos tested automatically, and all the legion of electrical operations are in full swing. A casual glance at some recent contracts includes a 250-light dynamo for the Royal Crown Soap Co.; a 100 light for the Robinson & McKenzie Lumber Co.; two 60-light plants for the East Kootenay Lumber Co.; a 30 h.-p. motor for J. W. Boyd; three motors for Gallagher's abattoir, and another of 50 h.-p. for the Arctic Ice Co.

The Stuart Machinery Company's shops are replete with every modern contrivance for turning out the best work, and as Canadians are not slow to appreciate the value of high-class machinery, a promising future is before this enterprising establishment at Winnipeg.

EQUIPPING A BOX MILL.

A. B. Cowan, the president of Cowan & Co., of Galt, Ont., is in town, a guest at the Victoria. Mr. Cowan yesterday entered into a contract with the Flewelling concern of Hampton for the furnishing of a new machinery equipment for the box mill which will replace that recently destroyed by fire. Mr. Cowan has been going through the lower provinces for many years and he is greatly pleased with the signs of prospects he saw on every hand this trip. The Sydneys he considered in their infancy.—St. John Sun, March 28.

BRANDON MACHINE WORKS COMPANY.

The Brandon Machine Works Co., Limited, have issued a 40-page illustrated catalogue of machinery made or handled by them. This firm has grown in recent years from a small concern employing less than a score of hands until now their buildings cover almost an entire block on the principal thoroughfare, while every department is equipped with modern machinery, and employing 100 machinists, boilermakers, blacksmiths, moulders, carpenters, pattern makers and painters.

DEPARTMENT OF ADVERTISING SUGGESTION AND CRITICISM

Edited by **W. Arthur Lydiatt,** TORONTO.

NOTE.—Herein are discussed the principles and practice of advertising. Subscribers are invited to send Mr. Lydiatt specimens of their newspaper and other advertising, for the purpose of review in this department. Address care of Department of Advertising, HARDWARE AND METAL.

It is our intention to make this department a regular feature of HARDWARE AND METAL. To make it the more interesting to our individual subscribers we invite them to write Mr. Lydiatt telling of their situation, the difficulties they have met with in getting adequate results from their advertising, and sending samples of their ads. to receive his impartial criticism.
If you want to know how your advertising can be improved, ask.—THE EDITOR.

THERE are periods in the experience of every retailer when he becomes temporarily enthusiastic over the business-building opportunities that lie in good advertising.

He has read of the success of others through the adoption of certain progressive methods; he has heard about men situated like himself who have "made things hum" by continually keeping at it.

In one form or another he gets an unlimited amount of advertising logic handed out to him. He reads in his favorite trade paper about "how he should do it." The solicitor for the local newspaper is continually dunning him for an ad., reminding him with each visit of the opportunities for getting new business he is missing by not having his ad. in the paper which is read by all the people to whom he looks for patronage.

In his quieter moments he ponders over these things, and no man who is anxious to make a success of his business can get away from the influence of this kind of talk for long.

Finally, he decides to "try it for a while."

He contracts for a certain amount of space in the local papers, and then sits down to write an ad.

The fact that what he is about to prepare is going in print makes him very particular what he says and how he says it. He is impressed with the necessity of making it read "nice," and it is quite natural that he should be. The fact of his giving serious attention to the "copy" is an encouraging sign.

In order to make sure that his ad. will be noticed, he thinks he ought to say something startling, so he looks through his competitors' ads. and racks his brain to try and think of some scheme or bargain that will "go them one better."

He tries so hard to think of something "big" to say that he overlooks all the little things that go so far in making an ad. interesting and effective.

It doesn't lie in the province of the ordinary retailer to do "big" things, comparatively speaking, so, after repeated efforts to write something out of the ordinary, he finally falls back on a formal announcement, which runs something like this:

> **John Smith** Hardware Main St.
>
> A full line of...
>
> **Household Hardware,**
> **Stoves, Ranges,**
> **Shovels, Rakes, Tools,**
> **Cutlery, Etc.,**
>
> at reasonable prices.
>
> BEST STORE IN TOWN.

While this kind of publicity may do him good—almost any kind of an effort will do some good—it falls far short of the possibilities. The fact that the same thing has been said hundreds of times before by as many different dealers, and that it really conveys no meaning either to your mind or anyone else, detracts from its effectiveness.

If our retailer has never advertised before, however, and does not know that but very few results ever come from this kind of an ad., he'll probably decide that it will do.

He watches its first appearance with a great deal of interest, possibly because it gratifies his vanity to see his name in the paper. For awhile this interest in his advertising space continues. Perhaps he will change the copy once or twice, because he has read that he ought to, but it is usually the case that as soon as the novelty has worn off, he begins to lose interest in the appearance of his ads.—or I should say, ad.—and his space to all intents and purposes becomes dead. At the newspaper office his is regarded as a "standing" ad.

Is it any wonder that a great many retailers cannot understand all this talk about the power of advertising in getting new business?

Do you ever wonder why your advertising does not bring you the results you expect? Is this the reason?

The public usually take about as much interest in a merchant's ads. as he does himself.

If he changes the copy every issue, most people will read each new ad. as it appears, if for nothing else than to see what is new in his store.

But if he doesn't take enough interest in his advertising space to use it to give the public the news of his store, he should not expect them to give his advertising, or his store, any attention. It is, therefore, not surprising that his advertising space remains unnoticed, and that his advertising expenditure is practically a dead loss.

People read the papers for the news they contain. They no more think of reading the same ad. every time it is published than they would think of repeatedly reading the same item of ordinary news.

To get the best results from your advertising it is necessary to change your ad. every time the papers in which you advertise are issued—even if it be every day.

And if you're ever stuck for something to say, think of what the traveller said when he sold you the goods—think of the reasons why you bought that produce from the farmer—and if this "talk" was good enough to sell the goods to you, it will likely prove effective in re-selling these goods to the public.

It isn't talk alone that sells you your stock, nor is it talk alone that sells that stock to the public. You usually have some samples.

Neither is it talk alone that will show you how to advertise your store—you must have some samples. That's why I am going to publish a few specimen ads. at frequent intervals, and to assist still further, these ads. will be "seasonable." They'll be ads. that you can use with good

effect just about the time I give them to you.

Those readers who may use them, might send me a copy of the paper containing the ad., as I will be interested to know that some are finding the suggestions of practical value.

Just at this season of the year people are fixing things up generally about the house and garden. Many of them have last year's tools, yet only need the suggestion from you to remind them that these are not in good enough order to suit them, or that they need repairing. They might decide that the old tools wouldn't do if you told them about the kinds you have, and the prices at which you sell them.

The ads. below are timely, and, with a few prices added, ought to catch the eyes of some needing ones.

GARDEN-MAKING TIME

is pretty sure to find you in need of some good garden tools. Ours are of the guaranteed goodness kind - price and kind guaranteed, just to your liking, or money back.

If there's a good garden tool made you're pretty sure to find it here

(Here might be mentioned a few garden tools with prices.)

Blank & Blank,
Masonic Block, - Main St.

When You Clean House

let us help you.

We can furnish you with everything necessary for cleaning, such as step-ladders, pails, scrubs and window brushes, mops, carpet and furniture beaters—in fact, everything necessary to help you make things spick and span.

Don't put up with the old when the new are so cheap.

Cleanine & Clean,
BATH, N. B.

Let me see some of the ads. you are using now. Write and tell me about the methods you employ, or have employed, in reaching out after new business.

Tell me about your successful schemes that I may pass the idea on to others.

Tell me about your advertising failures—schemes that didn't pan out just as you thought they ought to.

Perhaps I'll be able to tell you why, or suggest some improvements or new ideas.

Let's exchange ideas—you give me yours—I'll give you mine. Some real benefit to all concerned is sure to be derived from this kind of co-operation

TRAVELLERS AND TELEPHONE CHARGES.

Editor "Hardware and Metal":

Sir,—Something should be done by the Dominion Parliament at the present session to curb the money grabbing corporations. The Travellers' Association were to receive a special rate from The Bell Telephone Company, but nothing has come to light up to the present. The company have inserted pay 'stations in many of the leading hotels all over the country, and travellers who represent wholesale and manufacturing firms, are supposed to contribute every time they wish to use the 'phone, while The Bell Company make an agreement with the hotel proprietors to give them 20 per cent. of the receipts in the boxes attached to each 'phone, and, in addition, furnish a desk 'phone free for office or private use. This is not right, as practically all manufacturers have from one to ten 'phones in their establishments, besides switchboards and private 'phones throughout their factories, while members of the firms have them in their residences. Every traveller should be furnished with a certificate saying his firm is a subscriber, and he should, on showing this, be entitled to use the 'phone wherever he may be. The certificate should entitle the traveller to special rates over long distance service, either night or day.

The company would find it to their interest to keep in touch with the various travellers' associations as they carry a large influence with the merchants all over Canada, and if they were to decide to boycott The Bell Telephone Company the pressure would certainly be felt, as local companies are springing up all over the country.

Competition is the life of trade and the new companies will get their share before very long, as The Bell Company's present attitude toward the public generally in small towns is anything but pleasant. A guest in any hotel should be entitled to use the 'phone in that place without extra charge. Does the company's charter permit them to put in these collection boxes and impose on the public?

It is to be hoped the Canadian Manufacturers' Association and the boards of trade will debate on this question. These bodies, with the assistance of 15,000 travellers in Canada, should be able to get some concessions from The Bell Telephone Company before matters get too far advanced.

March 28, 1903.

TRAVELLER.

When the above was shown to J. K. Dunstan, of The Bell Telephone Company, he answered: "I am surprised to find a traveller so far behind the times. Why, pay stations are a feature of all first class hotels in Europe or America whether they be national, municipal or company 'phones. The practice is now universal in modern hotels and up to date travellers have come to realize that they have no more reason to expect free 'phone service than free drinks or shaves. More than that hotelkeepers have found that their guests are unanimous in appreciation of the change from the poor service of the old fashioned hotel 'phone to the thorough service now rendered.

"Have you considered the difference in the service of a few years ago and that of to-day? Formerly there was a 'phone at the disposal of guests of the man from the street, of anyone. Suppose you rang up a guest: a bell boy answered and went away to hunt your man. While he was away a third party entered the 'phone box and rang up central. The chances were that you were cut off and that by the time your man was brought to the 'phone the stranger was using the line. Many such annoyances occurred daily. Now, in one hotel I have in mind we have two operators at work and sound proof cabinets installed. If you want a guest at this hotel you ring him up. Our operator finds him and he has the use of our service gratis. If he wants to speak to anyone he has privacy and a fine service for a paltry nickel. It is the boast, not the shame, of hotels that they have an elaborate telephone system. The King Edward Hotel will have over 400 'phones, one for each room. This will necessitate four or possibly six operators, so it could not be done for nothing. Nor do the guests want it for nothing. They so appreciate the convenience that they do not worry about our nominal charge.

"Now as to reduction in long distance charges, does your correspondent propose to go to the central office each time he wants to telephone? That would be necessary. But even if he did, he would be asking for a great deal. We once gave the travellers a special rate, but other classes of business men began using the long distance 'phone so freely that we gave them all the special rate. Now, our friend wants another cut. So would the rest.

"The Bell Telephone Company feel most kindly towards all travellers, and I think we have the goodwill of the great bulk of them. Yet, we are sorry to have one of them feeling unkindly towards us."

Schaffer & Becker, general merchants, Blackville, N.B., have dissolved and are succeeded by Messrs. S[illegible]

Window and Interior Displays

Timely Hints and Suggestions.

FOUR METHODS OF DISPLAYING BRUSHES.

By L. J. L., Toronto.

On the approach of springtime merchants are looking for ideas on the display of brushes of various kinds. It is well that at this season of the year such lines of this as have, in many cases, been placed away in some obscure corner or shelves, should be brought forth and made use of in store decoration and window display. There is little difficulty in showing to good advantage various lines of brushes, if the retailer or some of his clerks would start out to get ideas on the subject.

An excellent way to procure such ideas is to get pointers from any traveller selling these lines. The salesmen, in moving about from place to place, never fail to notice many of the best plans of displaying goods in their line, both in windows and in store interiors. The following methods of showing brushes in windows may be of interest to wide-awake storekeepers:

(a) Make a frame of wood to suit the window; cut poultry netting to size of frame; fasten netting on frame; paint frame and netting dull shade. Paint and varnish brushes can be placed between the meshes of wire without injury to them. If care and ingenuity is devoted to the work the brushes can be arranged to show to excellent advantage on such a frame.

(b) A simple but effective display of scrubbing brushes can be made by fastening small screw hooks to end of scrubbing, stove, shoe and whitewash brushes and by arranging them in designs. For instance, four strings of brushes can be connected from the four corners of the window to meet in the centre. With this could be shown a display of various house-cleaning goods.

(c) Take some wooden hoops from an ordinary barrel; wind around the hoops some turkey red cotton or other suitably colored material. Place screw hooks in the inside and attach brushes. Hang the hoops at slight incline, so that the top or front brushes will not hide the back or lower ones. This can easily be changed, making inexpensive but excellent displays. They can be used inside the store as well as in the window. It would be well to change the brushes frequently, so that they might not become shop-worn.

(d) Secure heads of barrels; join firmly together; cover with some colored material; lay on brushes, the large ones on the outer edges and the small ones at the centre; use black tape to tack firmly over brush handles to keep them in position. When completed you have two circles on a large wheel of brushes, which will look well when hung up in the window or near the brush and painters' supply shelves.

The writer would like to see opinions from retailers who have tried such displays and have watched closely the results. It would also be interesting to hear of other plans of displays by other travellers or retailers.

A RETAILER'S EXPERIENCE.

One of the show-windows of a hardware store should be inclosed and made perfectly tight for the protection of cutlery and other easily-damaged goods, writes S. Holden in Iron Age. The partition separating the window space from the store proper should be of plain glass, so as not to shut off a view of an inviting interior. Mirrors on the back and side extending up about 30 in. from the window floor add much to the appearance of an inclosed window. A large wall case about 2 in. deep and filled with a good showing of 200 or more pocket knives may be placed above the mirror on the side of this window and will make a permanent and profitable display without injury to the goods.

Whether placing your goods before the public in the columns of a newspaper or in a show-window select articles that you want to sell and for which there is a demand, or for which you can create a demand, and put them before the public in a straightforward way, telling the price or any particular advantage they may possess. Neither fanciful nor grotesque displays will pay.

A good window of finishing hardware can be arranged by filling it with locks, escutcheons, butts, etc., of the same design and finish as sold for the leading new buildings. Cards should state where the goods are used and call attention to special features. Sketches of some of the buildings in course of erection may be placed in the window to good advantage if they can be obtained.

People working in windows or dummies representing them can be used occasionally when they directly advertise the goods for sale and are not calculated simply to draw a crowd. For example: During a very popular course of cooking lectures in our town we placed a kitchen table in the window and had a man dressed as a chef showing a new food chopper. Baskets of different vegetables, crackers and meat were placed in front of the table and the facility with which they were chopped, together with other advantages, were shown to the ladies who overcrowded our store every afternoon. Racks of kitchen specialties, principally those used in the cooking school, were placed around the window. We not only advertised in the papers, but gave each lady attending the lectures a small advertising blank book, with pencil attached, for writing receipts, etc. This exhibit sold several hundred of the choppers in the five days, besides many other cooking utensils, and has greatly increased our trade in both.

Neat price-cards should be used freely, not alone on cheap goods on which you are making a special price, but on the best goods. Pictures, if bearing directly on the goods for sale, often add much to a display. For example, a large cartoon, taken from an illustrated paper, of President Roosevelt and several foreign rulers seated around a beautifully browned turkey, was mounted on a card advertising a window filled with a new kind of roasting pans, and assisted in selling many dozens of the pans.

Customers are aided in selecting seeds, especially flower seeds, if the cards placed in the boxes of bulk seeds have either a colored picture, which can be obtained from seedsmen, pasted on them, or a water-color sketch of the flower.

MAY NOT PLACE DUTY ON LEAD.

An Ottawa correspondent writes that "A delegation of the silver lead men of British Columbia waited on Messrs. Fielding and Templeman on Monday in support of the request made some time ago for protection to this Canadian industry. Messrs. Smith, Riley and McPherson accompanied the delegation. It is very doubtful if the Government will do anything, its friends say, as nothing short of a Dingley tariff would be of any service to the industry. If American duties could be placed on lead, then the argument could be made that they should be applied to other Canadian industries as well."

Are You Letting Money Slip Through Your Fingers ?

Hardware dealers all over the country are making big money by carrying a line of Dodge Wood Split Pulleys.

The investment is small, for with the interchangeable system of bushings, a small stock suffices for almost any size pulley called for.

Progressive dealers are more and more recognizing the value of side lines—that take little space and offer big profit.

The Dodge Wood Split Pulley line is one of the best you can carry—a little advertising on your part—notifying the local mill plants that you carry the line, results in immediate orders and the money now passing by you will be yours.

A GRAVE DANGER TO BUSINESS.

IN spite of the good times which the country has enjoyed, and is enjoying, one cannot but look with alarm on the spirit of stock-market speculation which possesses so many business men in Canada to-day.

The immediate result of speculation is that those who practice it must perforce devote time and attention to it. The markets must be watched, brokers and other authorities consulted. It is only those who devote attention to the speculative market that can hope for one moment to be successful. This attention business men cannot afford to give unless they are prepared to let their business go by the board. No matter how profitable a business may be, it must be watched and cared for; it must have undivided attention.

Success in the stock market comes to but the few. The many are unsuccessful. If there is a lottery it is the stock market. Nothing is more fickle; nothing is more uncertain, not even a horse race.

There may be uncertainty about mercantile enterprises, but the mercantile enterprise is certainty itself compared with the general characteristics of the stock market. If business is properly conducted and backed by adequate capital, there is not much doubt about its success. It is as reasonably certain of success as anything can be certain.

The attractions of the stock market are, no doubt, very great. The thought of getting rich without spending long years of labor in office or in warehouse is unquestionably alluring, and particularly when the market is ruled by "bull" influences. But business men should stop and think before making the first venture, for there is not only the resultant loss which comes from neglect of business to be taken into consideration, but there is a very great danger of the market being controlled by "bearish" influences, and, what is worse, to be struck by panics.

What a "bear" raid means, not a few have learned to their sorrow during the past few months. Fortunately, we have not yet experienced the reality of a panic on the stock market, but we have come dangerously near it more than once within the last few months. Some day we shall experience the reality. We have in the years gone by, and history repeats itself in financial as well as in political affairs.

Should a panic strike the stock market business men who have money up on margins will be placed in a dangerous position, and the more they have pinched their capital for the purpose of speculation the greater financially will the squeeze be upon their legitimate business.

Business men cannot too carefully ponder over this matter.

THE SCARCITY OF LABOR.

Labor, both skilled and unskilled, never was in greater demand in Canada, particularly in old Canada, than at present. Contractors and others who take on a great many extra men in the spring are at a loss to know where they are to get them now. While in the matter of skilled labor there is a probability that by importation all the men that are wanted will be obtained, unskilled workingmen are bound to be hard to get. This is not only because of the extraordinary activity in the manufacturing industries, but also on account of the movement toward the west, which is taking out of Quebec and Ontario a large number of farm hands and ordinary laborers.

CANADIAN FUNDS ABROAD.

THE day when the operations of the Canadian banks were confined to the limits of the Dominion have gone by. Not only, as we pointed out a short time ago, are our banks opening branches in the United States and elsewhere, but it is significant that they are lending large sums of money abroad for commercial and financial enterprises.

According to the Government report for February, no less than $76,757,065, in the shape of call, short loans and current loans, were invested in countries outside Canada, largely, of course, in the United States. Of this sum, $44,668,557 were in call and short loans, and, no doubt, were for the benefit of operators in Wall Street.

The presence of Canadian funds on the New York market is attracting quite a little attention from the financial press of that city, and, to quote one of them, this circumstance has been taken earnest and friendly cognizance of by operators there.

As an evidence of the growth and wider ramification of the Canadian banks, this is, as far as it goes, a matter for congratulation, but there is still another side, which at the present moment is attracting some attention. In Canada the money market is, just now, by no means on the easy side, and speculators as a consequence find their operations somewhat curtailed.

Perhaps this is not an unmixed evil, for easy money means greater opportunities for speculations in margins, which, on sound business principles, cannot be but deprecated. At the same time, however, it does seem a little out of place that, while funds are rather limited in the home market, over $44,500,000 of Canadian money should be out in call loans on Wall Street, assisting the speculators there.

In Maine there is a law which imposes a tax on money loaned outside the State. To most people this will appear an arbitrary law, but it is not surprising that there are men to be found in Canada just now who are advocating that a similar measure should be adopted in this country.

THE DOMINION REDISTRIBUTION BILL.

IN deciding to leave to a joint committee of four Liberals and three Conservatives the preparation of the schedule fixing the boundaries under the new Redistribution Bill, the Dominion Government has taken a wise course.

Under the British North America Act, the Dominion Parliament is compelled to pass a new Redistribution Bill after each decennial census. The intention of that Act was, of course, to provide for this young and growing country adequate and proper representation in the House of Commons. The party in power, when framing this Redistribution Bill, has in the past, however, had an eye more for the strengthening of its own position in the country than thought for the principle of representation by population. As a natural result of this iniquitous policy, there was glaring distortion of constituencies. During the recent election in North Ontario, the attention of the public was more than once drawn to the elongated and unnatural shape of that constituency, which was one of the ridings that was glaringly manipulated for the advantage of the party in power.

The administration of Sir John Macdonald at Ottawa and that of Sir Oliver Mowat at Toronto were unlike unscrupulous in the matter of gerrymandering constituencies ; and on their record in connection therewith, spots have been left which will not be eradicated in this generation at any rate.

It is probable that had the present party been in power at Ottawa when previous redistribution measures were introduced it would have done just what the Conservative party did. We know, at any rate, what its party did in Ontario during the last and previous redistribution of seats in that Province.

Politicians do not run ahead of public opinion, and public opinion in this country, we firmly believe, would not countenance the glaring and unjust gerrymandering of constituencies which have in the past characterized Liberals and Conservatives alike. We are evidently living in a new era.

The decision of the Government to restore the boundaries of counties is also commendable, simply because it is the natural and right thing to do ; and if this principle is faithfully adhered to in the future, there will not be the same opportunities for gerrymandering of constituencies, for it was this manipulation of boundary lines that was the essence of the gerrymandering principle.

In referring the defining of county boundaries to a committee of the House, the precedent is only a new one as far as Canada is concerned. The principle itself was established years ago during the last distribution of seats in England, and was suggested by the Opposition and acquiesced in by Mr. Gladstone, the then Premier. But, while that may deprive any claim to originality that the Dominion Government may be disposed to set up, it by no means robs it of the credit that certainly accrues to it from the character of the present Redistribution Bill, which was introduced in the House on Tuesday by Sir Wilfrid Laurier.

Coming, as it does, when the country is agitated, pained and humiliated by the bribery charges at Toronto, the Redistribution Bill at Ottawa tends to cause one to think less harshly of the political parties.

NOTICE TO ADVERTISERS.

Friday next, April 10, being a holiday, advertisers will please take notice that all changes of copy to secure insertion must be in one day earlier than usual, viz., Tuesday, the 7th inst. We cannot hold ourselves responsible for change of copy received after this date.

C.P.R. EXTENSIONS IN THE WEST.

AN announcement that will be pleasing to business men of Manitoba and the Northwest Territories ; of all Canada, in fact, was made by J. W. Leonard, Supt. of the Western Division, on Thursday last, when the following was posted on the bulletin board of the Winnipeg Grain Exchange :

The company will this year construct side tracks on which elevator sites wil be located between the following stations : Bagot and Burnside, Meadows and Rosser, Rosser and Bergen, Sewell and Douglas, Sewell and Carberry, Poplar Point and High Bluff, Alexander and Griswold, Hargrave and Elkhorn, Fleming and Moosomin, Red Jacket and Wapella, Percival and Broadview, Wolseley and Sintaluta, Sintaluta and Indian Head, Indian Head and Qu'Appelle, McLean and Balgonie, Regina and Grand Coulee, Belle Plain and Pasqua, and also a siding at Little Pembina.

This virtually means that when these extensions are made sidings will be so frequent, so near one another, that the delay to passenger and through freights will be reduced to a minimum.

Moreover, there will be provided by this move a large increase in the elevator facilities along the line, as several firms, Canadian and United States, have expressed their intention of putting up elevators at the new sidings.

MR. CLERGUE'S RESIGNATION.

THE announcement that Mr. F. H. Clergue had retired from the managing directorship of The Lake Superior Consolidated Companies, was not altogether unexpected. In fact, it has for some time been expected.

Mr. Clergue is a man of extraordinary ability, particularly in the work of organizing large commercial enterprises. In this respect he may be classed with Mr. J. Pierpont Morgan. It is true that he has not floated as extensive enterprises as the New York banker, but taking into account the relative conditions in Canada and the United States, under which both promoters worked, what Mr. Clergue has accomplished is equally as great and surprising as anything Mr. Morgan has carried to a successful issue.

But floating commercial enterprises and managing them after they are called into existence is altogether different. For a long time it has been the opinion that Mr. Clergue had more under his control than he could as an individual manage, and the announcement of his resignation has confirmed the accuracy of this opinion.

Fortunately The Lake Superior Consolidated Companies will have the valuable assistance and counsel of Mr. Clergue on its Board of Directors. Whether as managing director or as a member of the Board of Directors of the enterprises which his genius and energy have called into existence, Canada cannot well forget Mr. Clergue. Had it not been for him it is very doubtful whether the industries which are making Sault Ste. Marie so famous, would have had an existence today ; at any rate to the same extent. And the feelings of Canadians cannot be but kindly towards the man, who, recognizing the great natural resources of the country, came over from the United States to promote their development

ON PARLIAMENT HILL

RUMINATIONS by "ZED."

LAST week was to a large extent farmers' week in the House, for after the long discussion on the cattle embargo in Great Britain, the matter of cattle guards aroused a great deal of interest on Thursday.

The Travelling Public.

In this case, however, the general public is more nearly interested than in the former, for in these days the "Travelling Public" and the "General Public" are one and the same thing. Thus it comes about that legislation which in any way tends to lessen or increase the cause of railway accidents is of vital interest to all, and possibly of special concern to those engaged in trade, whose business necessarily entails a large amount of travelling. The law as it at present stands requires the railways to maintain "suitable and sufficient" cattle guards where highways and railways intersect, but this is made nearly a dead letter by another statute which requires all cattle to be under human control if within half a mile of the railway crossing. Thus if a farmer's fence blows down in the night and his cattle stray to the highway and from thence to the railway right of way and are killed, the railway is not liable, even though it has no "suitable and sufficient" guard, even though it has no guard at all, because the minute the farmer comes into court the railway says, "Your cow was not under control when within half a mile of the railway, you are yourself a law-breaker, and so cannot be heard." This very unfair state of things has continued for many years, until the farmers have become very much embittered, and no question in rural Ontario is arousing more feeling than this one. Injustice long sustained invariably breeds unfairness in return, and now the farmers are demanding a bill which will make the liability of the railway absolute, no matter how great the carelessness of the farmer may have been in the letting of his cattle on the road, or even if he has purposely turned them on the road to pasture. Now this is where the travelling public comes in, for cattle killed on the track frequently mean trains derailed with consequent injury to the passengers, and it is contended strongly by those opposing the "Lancaster Bill," that its passage would greatly increase railway accidents. The matter was before Parliament last Session, and after three days spent in the Railway Committee and a long and very warm debate in the House, it was laid over until this Session, on the promise of the Minister of Railways that a commission would issue to enquire into a suitable guard, and that this Session the Government would take action in the matter.

The main excuse of the railways for not maintaining guards that would turn cattle was that no kind had yet been discovered which was perfect for that purpose, and so the Cattle Guard Commission, besides taking evidence in many parts of the country, has devoted many weeks to the practical test of various guards, all inventors being given a good fair chance in the Exhibition Buildings at Ottawa.

The daily papers for a long period had accounts of these tests, in which a one-eyed steer, endowed by nature with a wonderful intelligence, and by man with an excellent appetite caused by a 24 hours fast, again and again crossed the pet machines of clever mechanics for the pleasure of taking an afternoon tea on the further side. While no guard was found which would turn each and every animal, many were exhibited which would undoubtedly deter 90 per cent. of cattle wandering along the highway, and so it would seem that the Commission has not been time and money wasted. Strange to say, Mr. Lancaster, after agreeing last Session to wait the report of this Commission, again introduced his Bill, and while the first reading was allowed to pass unopposed, a motion made by Mr. Blair to refer the Bill to the Railway Committee was opposed, and a division had upon it. The result was that the motion carried by a large majority, and there will now be an opportunity to discuss with the greater freedom obtainable in the Railway Committe the new material which the report of the Commission, soon to be submitted, will furnish to the members.

It is to be hoped that something can yet be done to remove the existing undeniable grievance under which the farmers suffer, without substituting for it a grievance just as real for the railway companies, and which, as above pointed out, might result injuriously to the public at large.

* * *

ON Tuesday, the 24th of March, about three hours of the time of the House was taken up with discussing the British cattle embargo in relation to the Canadian cattle trade. So important is this line of commerce to Canadians in general that no one can object to the expenditure of time,

The Cattle Embargo.

and while party spirit may to some extent have crept in on both sides, the debate was in the main business-like and profitable. The question was raised by Mr. Bell, of Pictou, who asserted that the application of the Diseases of Animals Act of Great Britain to Canadian cattle was unjustifiable, that Canadian cattle at the time of the passing of the Act were and have since been free from contagious diseases, and that the application of the Act has an injurious effect upon the cattle trade of Canada. Thus far the debate developed a remarkable uniformity of opinion upon both sides of the House, but from the party standpoint the sting was in the tail, the last paragraph reading. "This House regrets that this Government has not succeeded by more vigorous protests, or by other effective steps, in finding means to obtain the removal of the existing unjust restrictions on the sale of Canadian cattle in Great Britain."

Three points were pretty well established during the discussion: First, that the Canadian herds are not only much freer from disease than are the herds of the Old Country, but that they are absolutely devoid of pleuro-pneumonia, the particular kind for fear of the spread of which the British Act was passed in 1892. Secondly, that the necessity to slaughter all cattle 10 days after their landing in Britain meant very serious loss to the Canadian exporter, and thirdly, that the continuance of the Act long after the chairman of the Board of Agriculture had admitted the non-existence of disease in Canadian animals was unfair to the Canadian breeders, indicating an unhealthy state in our herds which did not there exist.

Mr. Sherritt, member for North Middlesex, in a very fair and common sense speech, urged the advisability of getting an extension of time to, say, 20 days from time of landing till the time of slaughtering, since it seemed at present quite impossible to procure the abolition of the Act.

It was pretty clearly proven that the reluctance of the British Government to remove the restriction was nothing more nor less than a wish on its part to afford some protection to the cattle-breeders of the Mother Country, but, of course, in Free Trade England it is better to brand unfairly the output of Canada than to admit for a moment that such a dreadful thing as protection is admitted in even a small degree.

After the Prime Minister had asserted that the matter was brought up to the Imperial Conference and its discussion rejected because it was a matter of local consequence to Canada, and not of general interest to the Empire, it being handed over to the Postmaster-General to argue out with Mr. Hanbury, and after Mr. Haggart had stated that he and his friends of the Opposition desired unanimity on this subject, the motion was withdrawn by Mr. Bell.

MARKETS AND MARKET NOTES

QUEBEC MARKETS.

HARDWARE.

Montreal, April 3, 1903.

All staple lines of hardware continue to move briskly and wholesale men seem too busy to think of anything else, except to keep the order sheets well in hand. We notice that nearly all lines seem to be very firm and advances are noted in several instances. Harvest tools are moving very rapidly and have also advanced in price, the discount now being 60 per cent. instead of 60 and 10 per cent. Grindstone fixtures have increased in value about 5 per cent., and are now quoted at the following prices: No. 15, $3.50 per dozen; No. 17, $4 per dozen; No. 19, $4.40 per dozen. The selling prices of japanned thumb latches have also advanced about 10 per cent., and at present they are selling at the following figures: No. 1, 55c. per doz.; No. 2, 60c. per doz.; No. 3, 65c. per doz.; No. 4, 70c. per doz. A new list has been issued for Champion scales. The new discount is 50 per cent. Sectional sash weights have advanced 20 per cent., while common weights only about 10 per cent. A change of about 10 per cent. is noted in the price of brass cheese vat gates. The Wire Nail Association held their quarterly meeting last week, but the prevailing prices were not altered, although the tendency is very strong in that direction. Business generally is reported to be much better than for years past, but on some lines the margin of profit is small.

AGRICULTURAL WRENCHES.—The market is steady at the new list of prices and inquiries are being received by every mail. Our quotations are as follows: No. 6, $9; No. 8, $10; No. 10, $12; No. 12, $14; No. 15, $24, No. 18, $30; No. 21, $36. Discount 70 per cent.

CANT HOOKS. There is no special feature to note this week, but the demand continues to be brisk. Our quotations are still as follows: No. 12, $10.00; No. 8, $11.50; No. 8a, $11; No. 2, $12; No. 7a, $16; No. 6a, $14.50; No. 5a, $11.50.

LAWN MOWERS.—A brisk movement is reported in lawn mowers and the market is firm. We quote: 10½ in. wheel x 12 in. cutter, $7.50; by 14-inch cutter, $8.00; by 16-inch do, $8.50; by 18-inch do, $9.00; by 20-inch do, $10.00. Star, 9-inch wheel by 12-inch cutter, $5.50; by 14-inch do, $5.75; by 16-inch do, $6. Daisy, 8-inch wheel by 12-inch cutter, $4.90; by 14-inch do, $5.10; by 16-inch do, $5.30. Philadelphia pattern, 7½-inch wheel by 10-inch cutter, $6; by 12-inch do, $6.50; by 14-inch do, $7; by 16-inch do, $7.50. Grass boxes are quoted as follows: 12-inch, $2.25; 14-inch, $2.25; 16-inch, $2.50; 18-inch, $2.50; 20 inch, $2.75. The discount on all the above is 50 per cent. off.

BARB WIRE. Orders are exceptionally heavy in this line and trade shows a decided improvement over last year. We quote: $2.80 per 100 lb. f.o.b. Montreal; $2.45 f.o.b. Cleveland in carlots of 15 bales and $2.67½ f.o.b. Cleveland in smaller lots.

GALVANIZED WIRE.—There is only a fair demand for galvanized wire. Quotations are as follows: No. 5, $3.70; No. 6, 7 and 8, $3.15; No. 9, $2.55; No. 10, $3.20; No. 11, $3.25; No. 12, $2.65; No. 13, $2.75; No. 14, $3.75. In carlots, f.o.b. Cleveland: No. 5, $2.20; Nos. 6, 7, 8 and 9, $2.15; No 10, $2.20; No. 11, $2.25; No. 12, $2.30; No. 13, $2.40; No. 14, $2.50. In less than carlots, 12½c. per 100 lb. extra is charged.

SMOOTH STEEL WIRE.—The quotations remain unchanged, but the market shows a tendency to advance. Prices are still as follows: Bright and annealed, $2.50 per 100 lb. f.o.b. Montreal, Toronto, Halifax, London, Hamilton and St. John. Net extras per 100 lb. are now as follows: Coppered wire, 60c.; tinned wire, $2; oiling, 10c.; spring wire, $1.25; best steel wire, 75c.; bright soft drawn, 15c.; special hay-baling wire, 30c.

FINE STEEL WIRE. There is a good business being done for shipment after the opening of navigation. The discount is 25 per cent. with the following extras: 1 and 2-lb. hanks, 25c. per 100 lb.; ½-lb. hanks, 37½c. and ¼-lb. hanks, 50c.

BRASS AND COPPER WIRE.—A fair demand is being experienced at last week's quotations. The discount is 60 per cent.

PRESSED SPIKES.—The market is firm and the movement is somewhat improved during the week. The discount is 20 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

FENCE STAPLES.—Inquiries are daily received, but as yet no large orders have been booked. We quote: $3 per 100 lb. keg for galvanized staples and $2.80 for bright, with 25c. extra for 25 and 50 lb. packages.

WIRE NAILS.—The prices show a tendency to advance, but no change is reported up to time of writing. We now quote: Carlots, $2.40 and small lots, $2.45 per keg f.o.b. Gananoque, Montreal, London, Hamilton, Toronto, Brantford, Windsor, Ont., and St. John.

HORSE NAILS.—A good trade is being done at unchanged prices. Quotations are as follows: "M" brand, "Oval" and "New City" heads, 55 per cent.; "Countersunk" heads, prices quoted on application. "C" brand, 40, 10 and 7½ per cent. off; "Monarch," 60 per cent. and "Peerless," 50 per cent.

HORSESHOES.—Trade has fallen off considerably during the month of March. Our quotations are still as follows: Iron shoes, light and medium pattern, No. 2 and larger, $3.40; No. 1 and smaller, $3.65; snow pattern, No. 2 and larger, $3.65; No. 1 and smaller, $3.90; X L steel shoes, new light pattern, sizes 1 to 5, No. 2 and larger, $3.55; No. 1 and smaller, $3.80; featherweight, all sizes, 0 to 4, $5.10; toe weight, all sizes, 1 to 4, $6.35. Shoes, more than one size in a keg, 10c per keg extra f.o.b. Montreal only.

RIVETS AND BURRS.—There is no change to note in regard to rivets and burrs. Discounts are as follows: Best iron rivets, section carriage and wagon box, black rivets, tinned do., coopers' rivets and tinned swedes rivets, 60 and 10 per cent.; swedes iron burrs are quoted at 55 per cent. off; copper rivets, with the usual proportion of burrs, 45 per cent. off and coppered iron rivets and burrs, in 5-lb. carton boxes are quoted at 60 and 10 per cent. off list.

BOLTS AND NUTS. The supply continues to be limited and the demand brisk. The discounts are now as follows: Norway carriage bolts, 55 per cent.; common, 50 and 10 per cent.; full square carriage bolts, 55 per cent.; machine bolts, 50 and 5 and 10 per cent.; coach screws, 66 2-3 per cent.; sleighshoe bolts, 65 and 5 per cent.; blank bolts, 50 and 5 per cent.; bolt ends, 50 and 5 per cent.; plough bolts, 50, 5 and 10 per cent. Tire bolts, 67½ per cent.; stove bolts, 67½ per cent. Nuts, square, 3½c. per lb. off list; hexagon nuts, 3¾c. per lb. off list. To all retailers an extra discount of ½c. per lb. is allowed.

SCREWS.—A steadier feeling prevails and a fair trade is reported. We quote as follows: Round head bright, 82½ per cent.; flat head bright, 82½ per cent.; brass, round head, 75 per cent.; brass, flat head, 80 per cent.

CORDAGE.—A decided improvement is noted in this market at unchanged prices. We quote: Pure manila, 11c.; British pure manila, 12c.; sisal, 11c.; double lathyarn, 10½c.; single lathyarn, 10c.

BUILDING PAPER.—There is a brisk demand for building paper. Our quotations now are: Tarred felt, $1.75 per 100 lb.; 2-ply, ready-roofing, 90c per roll; 3 ply, $1.15 per roll; carpet felt, $2.25 per 100 lb.; dry sheathing, 35c. per roll; tar sheathing, 45c. per roll; dry fibre, 55c. per roll; tarred fibre, 60c. per roll, O K and I X L, 65c. per roll; heavy straw and sheathing, $30 per ton; slaters' felt, 60c. per roll.

SCREEN WIRE CLOTH.—The market shows signs of advancing and is very active at present. The ruling price is $1.40 per 100 square feet.

FIREBRICKS.—The spring business is only starting and a big season is looked for. We quote: English, $16 to $22 and Scotch, $17 to $22 per 1,000.

CEMENT.—It is still a little early for cement and only a few orders are being booked. Quotations are as follows: Canadian cement, $1.90 to $2.25; German, $2.25 to $2.40; English, $2.15 to $2.25; Belgian, $1.70 to $1.95 per bbl. ex-store, and American, $2.20 to $2.40 ex-cars.

COAL HODS.—Dealers report the closing season as being only fair, being accounted for by the scarcity and high price of coal. Our quotations are as follows: Japanned, 16-in., $4.50 per doz.; 17-in., $4.80; 18-in., $5.10; with gold band, 17-in., $5.10; 18-in., $5.40. Galvanized, 16-in., $6.20; 17-in., $6.50; 18-in., $6.80 per doz. The discount is 45 per cent.

FIRE SHOVELS.—Discounts are: No. 70, 38½ to 40c. per doz.; No. 55, 55 to 60c.; No. 57 82½ to 90c.; No. 60, 82½ to 90c.; No. 65, $1.37½ to $1.45; No. 80, 50 to 55c.; "Duplex," No. 7, $1.21; No. 9, $1.52; No. 11, $1.82.

LANTERNS. Prices are steady and only a small trade is reported. We quote: Tilt, lift or hinge, No. 0, $4 per doz.; Cold Blast, $7.00 per dozen; dashboard, No. 0, $5.75 per dozen; cold-blast dashboard, $9 per dozen. Extras are as follows: Japanning, 50c. per dozen; cop-

per plating cold blast, $2 per dozen. The prices quoted are f.o.b. London, Hamilton, Toronto, Belleville, Kingston and Montreal.

SHOT.—There is no change to note in the price of shot, and our quotations are as follows: Ordinary drop shot, A.A.A. to dust, $6.50 per 108 lb.; chilled, Nos. 1 to 10, $7 per 100 lb.; buck and seal, $7.50 per 100 lb.; ball, $8 per 100 lb. Trade discount, 15 per cent. f.o.b. Montreal, Toronto, Hamilton, London, St. John, N.B., and Halifax.

METALS.

In hardware and heavy metals there has been a brisk movement, and prompt shipments were necessary in order to satisfy the immediate requirements of retailers. Remittances have been fairly satisfactory and values incline to firmness. Iron is in a strong position. The difficulty of obtaining fuel has now been almost overcome and furnaces can be put in full operation; but in spite of the increased output resultant on this change of the situation, the market is likely to retain all its firmness as a great demand awaits all new iron and the full supply will be no more than adequate. Both domestic and foreign markets are active, and it is reported that in some lines contracts have been already placed running well in to 1904. With the opening of spring the work on bridges, buildings and railways will be pushed with greater energy, and for this, all railway and structural iron is in demand. Iron pipe is moving briskly; galvanized plates and sheets exhibit a firmer tendency; bar iron has been offered at lower rates to secure business, but there is a fair demand, and a scarcity is reported in the smaller sizes. Agricultural machinery is, of course, in active demand, and merchant steel, for the manufacture of this, is being ordered for delivery from the present well into the future. Copper is still strong and shows a tendency towards higher prices. Pig tin is also firm, and lead and zinc show strength. There is no change in the English market with the exception of galvanized iron, which is 5s. per ton higher. The market, however, is firmer, and a general advance is looked for. We quote:

BAR IRON.—A scarcity is reported in the smaller sizes, but the demand continues to be brisk. We quote: Merchants' bar, $2; horseshoe iron, $2.25 and forged, $2.30.

BLACK SHEETS.—The demand is fair and prices are steady. Our quotations are as follows: 28 gauge, $2.65; 26 gauge, $2.60; 20 to 24 gauge, $2.50; 8 to 20 gauge, $2.50

GALVANIZED IRON.—Several large orders are booked for shipment as soon as navigation opens. Our quotations are now as follows: 28 Queen's Head, $4.50; Apollo, 10¾-oz., $4.30; Fleur de Lis, $4.15; Comet, $4.10; "Bell" brand, $4.05. For less than caselots 25c. extra is charged.

LEAD PIPE.—There is a good movement in lead pipe at unchanged prices. We quote: Composition and waste, 8c. and ordinary, 7c. The discount is 30 per cent.

IRON PIPE.—The bulk of the orders that have been booked were for delivery under the new freight rates. Our quotations are as follows: Standard pipe per 100 ft., in lengths under 19 ft.: Black, ¼, $2.40; ⅜, $2.65; ½, $2.85; ¾, $3.65; 1-in., $5.20; 1¼, $7.35; 1½, $8.95; 2-in., $12.55. Galvanized, ¼, $3.20; ⅜, $3.45; ½, $3.85;

¾, $5 ; 1-in., $7.20 ; 1¼, $10.05 ; 1½, $12.20 ; 2-in., $16.85. Extra heavy pipe, plain ends, are quoted per 100 ft. as follows: Black, ½, $4.20 ; ¾, $5.25 ; 1-in., $7.65 ; 1¼, $10.55 ; 1½, $12.75 ; 2-in., $17.60. Galvanized, ½, $5.20 ; ¾, $6.65 ; 1-in., $9.55 ; 1¼, $13.25 ; 1½, $16; 2 in., $21.90. For threads and couplings on extra heavy 5 per cent. net is added. Trade discount, 5 to 7½ per cent.

TINPLATES.—No further advance is reported and the market is steady. We quote: Coke, $4.25 to $4.50 and charcoals, $5 to $5.25.

SOIL PIPE AND FITTINGS.—Inquiries are being received daily and a few large orders were booked the early part of the week. The discounts are as follows: Light soil pipe, 3 to 6 inch, 50 per cent.; medium and extra heavy soil pipe, 2 to 6-inch, 60 per cent.; extra heavy soil pipe, 8 inch, 45 per cent.; light fittings, 2 to 6-inch, 50 and 10 per cent.; medium and extra heavy fittings, 2 to 6-inch, 60 per cent.: extra heavy fittings, 8-inch, 45 per cent.

PIG IRON.—The demand is very heavy, but considerable difficulty is experienced in filling orders. We quote $33.50 to $34.50 ex store Montreal.

INGOT COPPER.—There has been no further advance in price, but the market is very firm. We quote $15.50 to $15.75 per 100 lb.

INGOT TIN.—No changes have taken place in the ingot tin market during the past week, and is still quoted at $33 to $33.25 per 100 lb.

PIG LEAD.—There is a tenhency to still further advance this market, and buyers seem very careful how they are placing orders. We quote carlots at $3.50 and less than carlots at $3.75.

STEEL.—The demand is brisk and the market is firm. We quote: Mild, $2.05 ; sleighshoe, $2.10 to $2.20 ; tire, $2.15 to $2.25 ; spring, $2.85 to $3 ; reeled machinery, $2.75 to $3 ; toecalk, $2.60 to $2.75 ; machinery (iron finish), $2.10 ; mild steel, $2.05 ; square harrow, $2.15.

TOOL STEEL.—The bulk of the business is for delivery about the end of April or the early part of May. We now quote : Black Diamond, 8 to 9c.; Sanderson's, 8 to 9c., according to the grade ; Jessop's, 13c.; Leonard's, 7½c ; Jonas & Colver's, 10 to 20c.; "Air Hardening," 50 to 65c. per lb.

CANADA PLATES.—The English market is somewhat easier this week and the local market seems to be more brisk than a week ago. Quotations are as follows : 52s, $2.60 to $2.70; 60s, $2.70 to $2.80; 75s, $2.80 to $2.85; full polished, $3.75 and galvanized, $4.25 to $4.35 ; galvanized, 60s, $4.45 to $4.55.

TERNE PLATES.—We quote the price at $7.75.

COIL CHAIN.—A brisk demand continues and prices remain at last week's figures. Our quotations are as follows : No. 6, 11½c.; No. 5, 10 to 10½c.; No. 4, 9 to 9½c.; No. 3, 8 to 8½c.; ¼-in., 6½ to 7c. per lb.; 5-16, $5 to $5.20; 5-16 exact, $5.25 ; ⅜, $4.25; 7-16, $4 ; ½, $3.95 to $4.05; 9-16, $3.85 to $3.95; ⅝, $3.65 to $3.75; ¾, $5 to $5.20; ⅞, $3.30 ; 1-in.,$3.15 to $3.25. In carlots an allowance of 10c. is made.

SOLDER.—The market continues to be firm and another rise in prices is looked for. We quote : Bar solder, 20c. and wire solder, 19c.

ZINC SPELTER.—There is a good business being done. We quote $6.25 to $6.50.

SHEET ZINC.—We quote $6.75 to $7.

SCRAP METALS.

The scrap metal market continues to improve and a fair amount of scrap is being received from country dealers. Cast iron is somewhat easier this week and the demand is not so heavy. Copper is scarce and the price is likely to advance in the course of the next week or ten days. We quote as follows : Heavy copper and wire, 10c. per lb.; light copper, 9c.; heavy red brass, 10c.; heavy yellow, 8½c.; light brass, 5c.; lead, 2 to 2¼c.; zinc, 2½ to 2¾c.; iron, No. 1 wrought, $17 to $17.50 ; No. 2, $7.50 per ton ; machinery scrap, $17.50 to $18 ; stove plate, $13 ; malleable and steel, $6 ; mixed country rags, 60 to 70c. per 100 lb.; old rubbers, 6¼ to 6¾c. per lb.

RAW FURS.

RAW FURS.—The March fur sales took place in London last week, and the changes known so far are as follows : Black bear, 20 per cent. lower than March, 1902 ; brown bear, 30 per cent. lower ; musk ox, 30 per cent. lower ; silver fox, about 35 per cent. higher ; cross fox, 20 per cent. higher ; white fox, 5 per cent, higher ; red fox and blue fox, same as last March ; beaver, same ; martin, same ; otter, 25 per cent. higher ; lynx, 40 per cent. higher ; mink, 10 per cent. higher ; wolf, 5 per cent. lower ; wolverine, 10 per cent. lower ; fisher, 20 per cent. higher. On most of the furs a higher price was realized. Offerings were fairly large on nearly all lines. Local quotations are unchanged as yet, and prices are :

The Canada Hardware Co., Limited, have received a large consignment of nickel-plated tea kettles and teapots; also hay carriers, steel tracks and pulleys.

ONTARIO MARKETS.

HARDWARE.

Toronto, April 3, 1903.

THE rush for deliveries is now on in earnest and wholesale houses are taxed to their utmost to meet requests from the trade in all parts of Ontario and the West for immediate delivery, particularly of fence wire, wire nails and spades and shovels. Much difficulty is being experienced in securing stocks of spades and shovels, as the manufacturers are behind with their orders and are not likely to catch up for some time to come. The advance in harvest tools seems to have encouraged buying. Lawn mowers are being asked for, but the manufacturers are not all ready to ship yet. Ship and boat builders are hurrying up deliveries of rivets and burrs, the early opening of navigation having caused an earlier demand for the completion of repairs and of new boats than was anticipated. Agricultural wrenches are cheaper, the discount being increased to 70 and 10 per cent. Champion scales are dearer, the discount having been reduced 5 per cent., now being 50 off. Cement is firm with an advance in manufacturers' prices to jobbers. There are no further changes.

BARB WIRE.—The demand from all over Ontario is excellent and as railways

HIDES.

The market is quiet and very few first-class hides are to be had. We quote : No. 1 hides, 8c.; No. 2, 7c.; No. 3, 6c. Calfskins, 9 to 11c. and lambskins, 75c.

MONTREAL NOTES

Harvest tools have advanced slightly during the week.

New price lists have been prepared for Champion scales. The discount, which was 55 per cent., is now 50 per cent.

have started taking shipments for delivery via Sarnia, Owen Sound and Collingwood to Sault Ste. Marie, Port Arthur and Fort William, the demand from Manitoba and the Northwest is heavy already. The base price is quoted as follows : $2.55 from Cleveland and 10c. less in carlots. From stock, Toronto, $2.80.

GALVANIZED WIRE.—This line is also in big request from all quarters. The prices are steady, and quotations are as follows : Nos. 6, 7 and 8, $3.15 to $3.35 per 100 lb. ; No. 9, $2.50 ; No. 10,

$3.20 to $3.40 ; No. 11, $3.25 to $3.45 ; No. 12, $2.65 ; No. 13, $2 75 ; No. 14, $3.75 to $3.95 ; No. 15, $4 30 ; No. 16, 44.55. Nos. 6 to 9 base from Cleveland are quoted at $2 27½ in less than carlots.

SMOOTH STEEL WIRE.—A big movement is recorded in this line also. Prices are steady. The base price is $2.50 per 100 lb. Oiling, 10c., coppering, 60c. and tinning, $2 per 100 lb. extra. Shipping points, Toronto, Hamilton, London and Montreal, with freights equalized on those points.

WIRE NAILS.—A good movement to all districts is recorded. Prices are firm. We quote : $2.45 per keg and 5c. less for carlots. The shipping points are Toronto, Hamilton, London, Gananoque and Montreal.

CUT NAILS.—There is an excellent demand for shingle nails, and an improvement in the request for larger sizes. We quote $2.50 per keg.

HORSE NAILS.—A fairly good demand is reported. Prices are steady, with discounts as follows : "C" brand, oval head, 40 and 10 and 7½ per cent.; on "Monarch," 60 per cent. and "Countersunk" head, 60 per cent.; on "Peerless," 45 and 7½ per cent.

HORSESHOES.—The movement is not large, but prices are firmly maintained. Quotations are as follows : Iron shoes, No. 2 and larger, light, medium and heavy, $3.45 ; snow shoes, $3.70 ; light steel shoes, $3.55 ; featherweight (all sizes), $4.95 ; iron shoes, No. 1 and smaller, light, medium and heavy (all sizes), $3.70 ; snow shoes, $4 ; light steel shoes, $3.80 ; featherweight (all sizes), $4.95.

SCREWS.—This is one of the busiest lines in the list at the moment, all kinds being in demand. We quote : Flat head bright, 87½ per cent. discount ; round head bright, 82½ per cent.; flat head brass, 80 per cent.; round head brass, 75 per cent.; round head bronze, 70 per cent.; flat head bronze, 75 per cent.

RIVETS AND BURRS.—There is a particularly good demand from ship and boat builders, while the movement to machine shops keeps large. Prices are firm. we quote . Iron rivets, 60 and 10 per cent. discount ; iron burrs, 55 per cent.; copper rivets, with usual proportion of burrs, 45 per cent.; copper burrs

BOLTS AND NUTS.—Business keeps up exceedingly well. Quotations are as follows : Carriage bolts, common (81 list), 50 and 10 per cent.; carriage bolts, full square ($2.40 list), 55 and 10 per cent.; carriage bolts, Norway iron ($3 list), 55 and 10 per cent.; machine bolts, all sizes, 50, 5 and 10 per cent.; coach screws, cone points, 66 2-3 and 10 per cent.; elevator shaft and whiffletree bolts, 50 per cent.

SPADES AND SHOVELS.—The condition predicted three weeks ago is already having its effect on the market. Manufacturers and jobbers are already behind their orders. Prices are steady. Discount is 15 per cent. and the list price has been reduced $3 per doz. for Olds' goods, $2 for Gray's and $1 for Burns'.

ROPE.—Orders are increasing and prices continue firm as follows : Pure manila, 12c.; sisal, 11c.; lathyarn, single, 11c. and double, 11½c.; sisal bed cord, 3 cord, 48 feet, 65c.; 60 feet, 80c.; 72 feet, 95c. per doz.

HARVEST TOOLS.—There is an extremely heavy movement, and many new orders are coming in. The discount is maintained at 60 per cent

CARPENTERS' TOOLS.—A good demand for immediate delivery is reported. The withdrawal of the extra 10 per cent in discount has strengthened the market, and the present discount, 55 per cent., is well maintained.

LAWN MOWERS.—Retailers are beginning to ask for quick delivery of lawn mowers, but the manufacturers do not seem to have the goods ready. Prices are unchanged. We quote : Woodyatt, 12 in. wheels, $5.50 ; Daisy, 12 in. wheels, $4.90 ; Philadelphia, 10 inch wheels, $6; Ontario, 10 inch wheels, $12.75. The discount is 50 per cent.

BRASS RODS AND TUBES.—The activity continues. Prices are as follows : Tubing, 3/16, 50c.; ¼, 35c., 5/16 to 2 in., 28c. Pipe, ¼, 35c.; ⅜, 28c.; ½ to 3 in., 25c.

BUILDING PAPERS.—Orders in this line have been large and are still coming in freely. We quote : Dry sheathing, grey or straw, 35c. per roll; tar sheathing, grey or straw, 45c. per roll ; dry fibre, 55c. per roll ; tarred fibre, 60c. per roll.

RANGE BOILERS.—The demand continues good, with prices steady. We now quote : 18 and 30 gal., $5.50 ; 35 gal., $6.50; 40 gal., $7.50; 52 gal., $12.50; 63 gal., $19; 82 gal., $23; 100 gal., $31 and 120 gal., $37.

SCREEN DOORS.—The demand continues comparatively light. We quote : Screen doors, common, two or three panel, walnut stained, 4-in. style, $6.80 ; stained, yellow or green, $7 ; in natural colors, oil finish, $8.15 ; 3-inch style, 20c. per dozen less.

CEMENT.—Prices are exceedingly firm and an excellent demand is recorded. We quote : Canadian Portland, $2.40 to $2.50 ; German, $2.30 to $2.60 and hydraulic, $1.50.

METALS

The movement continues exceedingly active and includes practically all lines. Tin and copper are easier in sympathy with lower prices in both London and New York. Pig iron continues steady, though buyers are watching keenly developments in the United States markets, where an unsettled feeling regarding future prices is manifest. Steel is firm on all markets, as are also lead, tinplates, galvanized sheets, solder and zinc sheets.

PIG IRON.—The market continues firm for immediate delivery in all markets, but there is an unsettled feeling as to the future in the United States market. This feeling has led to a cut of $1 per ton in Southern foundry iron for deliveries during the last half of the year. Regarding this The New York Journal of Commerce, of Thursday, says : "The reduction is said to have been made in pursuance of a purpose to secure trade that is now going to European makers of pig iron, especially those in Germany, who have been underselling the home producers in Eastern markets to the extent of at least 75c. per ton. It is believed that the action of the Southern furnace companies in making the cut to $16.50, basis No. 2 at the foundry, or $20.75 New York, was the result of an agreement or understanding among them. Buyers who have been withholding orders for domestic iron, or have been giving the preference to imported material pending a reduction in quotations on the former, are now expected to come in to cover their requirements for the balance of the year, and

STANDARD.
The cost of Axes per million feet of lumber taken out should be the best Standard. Under this Standard the CROWN JEWEL is the cheapest Axe in the market.

Dundas Axe Works, Dundas, Ont.
W. L. Haldimand, Jr., Eastern Agent, Montreal

already, although the news of the break has not yet had time to spread far, there has been a considerable increase in the demand for Southern iron, according to reports of resident agents. There is no pressure to sell for prompt or early delivery, and it is said that any iron that may be available for such deliveries finds a ready market at previous prices. There is little No. 1 offering for present delivery, but No. 2 can be had at $22.50 to $22.75. No. 2 Summerlee continues steady at $25 on track, Toronto.

STEEL BOILER PLATES – There has been a good demand and prices are firmly maintained. We quote $1.96 f.o.b. Toronto.

TOOL STEEL—A good movement continues at steady prices. Our quotations are as follows: "B C" and "Black Diamond," 10 to 11c.; Jessop's, Morton's and Firth's, 14c.; Jonas & Colver's, 10 to 20c.; ditto, "Air Hardening," 70c. per lb.; Chas. Leonard's, 8 to 9c.; Park's "Silver," 12 to 14c.; Park's "Special," 15 to 20c.

MACHINERY STEEL—A fairly good trade is reported. Prices are steady at $2 to $2.05 f.o.b. Toronto.

BAR IRON—A good movement continues. We quote: $2.05 for extras, cut to length while rolling: 2 ft. and over, 10c. per 100 lb.; 1 ft. and under 2 ft., 15c.; under 1 ft., 20c,; over 20 ft., by special agreement, according to length and size.

BLACK SHEETS—An active demand continues. We quote: Common, $3.15 for 28 gauge and dead flat; $3.50 for 26 gauge.

CANADA PLATES—The demand continues to improve. We quote: All dull, $2.90 to $3; half-polished, $2.85 to $3.10, and all-bright, $3.75 to $3.85.

GALVANIZED SHEETS—Prices are firm, as follows: Queen's Head, $4.50 for 28 gauge; American, $4.40 for 24 gauge; Bell brand, $4.30 for 28 gauge; Gordon Crown, $4.50 for 28 gauge.

TIN—The publication of monthly pig tin statistics on Wednesday had a depressing effect on the market, as they showed the consumption to be little more than this time last year, while the world's visible supply was considerable larger than a year ago and 15 per cent. larger than a month ago. There is a reduction of 25c. here. We quote $33 to $33.25.

TINPLATES—There is a brisk demand and prices are steady. We quote: Charcoals, $4.75 to $5, and cokes, $4.25 to $4.50 per box.

COPPER—The predicted reaction from the high prices has set in, and the foreign markets are considerably easier. No change is yet noted here. We quote: Ingot copper $13 and sheet copper $22 to $23 per 100 lb.

BRASS—The market is steady since the change in discounts noted last week, making the latter 10 off list.

LEAD—Business continues excellent. The firmness in the outside markets is reflected here. Quotations are as follows: $3.50 per 100 lb. for pig lead and $3.75 for bar lead.

IRON PIPE—The demand continues brisk. Quotations are: Per 100 ft.: Black pipe, ⅛-in., $3.25; ¼-in., $2.40; ⅜-in., $2.65; ½-in., $2.85; ¾-in., $3.65

WILL IT PAY?

SINGLE FIRST FLOOR OUTFIT.

Every business transaction is weighed by one standard.

Will It Pay?

If you handle *oil of any kind* and are considering the purchase of a

BOWSER
Self-Measuring
OIL TANK

Let us ask you a few questions:

Is it worth 10 cents a Day to handle your oil without waste?

Is it worth 10 cents a Day to sell your oil without loss of time and labor?

Is it worth 10 cents a Day to have no leaky, dirty measures and funnels to handle?

Is it worth 10 cents a Day to keep your oil room neat and clean?

We might propound a hundred questions equally as pertinent. If any one of these is worth 10 cents a day, is not the combination of the many worth more than the cost of a **Bowser Self-Measuring Oil Tank,** which will give you all these advantages.

Let us give you full particulars. **Ask for Catalogue "A."**

S. F. BOWSER & CO., Factory FORT WAYNE, IND.
65 FRONT STREET EAST, TORONTO.

1-in., \$5.20 ; 1¼-in., \$7.35; 1½-in.,\$8.95; 2-in., \$12.55; 2½-in., \$21 ; 3-in., \$25 ; 3½-in., \$32 ; 4-in., \$38.

ZINC SPELTER—Prices are steady, with fair amount of business doing. We quote 6¼ to 6 c.

ZINC SHEETS—The market is still strong, owing to the comparatively light stock carried. We quote the base price as follows : Cask lots, \$6.75 to \$7, and part casks, \$7 to \$7.25.

SOLDER—The market is strengthening, but there is no change in prices. Guaranteed half-and-half is quoted at 18 to 19c. and wiping 17 to 18c.

OLD MATERIAL.

No. 1 wrought scrap is \$1 per ton higher. Other prices are firm. There is an excellent demand. We quote as follows : Heavy copper and wire, 12c. per lb.; light copper, 10c. per lb.; heavy red brass, 10c. per lb.; heavy yellow brass, 8¾c. per lb.; light brass, 5½c.; lead, 2¾c.; scrap zinc, 3c.; iron, No. 1 wrought, \$11 per net ton ; No. 2, wrought, \$5 ; machinery cast scrap, \$16 ; stove plate, \$11 ; malleable and steel, \$7 ; old rubbers, 6½c. per lb. and country mixed rags, 50c. per 100 lb.

SEEDS.

The seed market at the present time is very good, as it should be, for this is the seed season. There is no change since last week in the general market and the prices remain the same. We quote as follows : Red clover, ex warehouse here, \$6.30 to \$8 ; alsike, ex warehouse here, \$5.25 to \$8.50 ; Timothy, ex warehouse here, \$2 to \$2.75.

HIDES, SKINS AND WOOL.

There is very little change in the market since last week. The calfskin market is still strong ; the wool market remains weak, but the demand for hides has increased a little, although it is still rather poor. Prices remain unchanged. We now quote :

HIDES.—No. 1 green, 7½c.; No. 2 green, 6½c. per lb.; No. 1 green, steers, 8c.; No. 2 green, steers, 7c. per lb.; cured, per lb., 8¼ to 8¾c.

CALF SKINS.—Veal skins, No. 1, 6 to 14 lb. inclusive, 10c.; No. 2, 8c.; No. 1, 15 to 20 lb. inclusive, 9c.; No. 2, 7c. Deacons (dairies), each, 60 to 70c.; sheep skins, 80 to 90c.

WOOL.—Unwashed wool, per lb., 8½ to 9c.; fleece wool, 16c.; pulled wools, super., per lb., 15 to 17c.; ditto, extra, 19 to 20c.

TALLOW.—Tallow is very scarce. We quote 5¾ to 6c. per lb.

FOREST CITY GOSSIP.

Office of "Hardware and Metal."

WHOLESALE hardware merchants in this city all report active business. Travellers are meeting with much encouragement on the road, and all are doing well, while orders for goods per mail are numerous. Buyers are not coming into the city from outside points at present. The good weather appears to keep country merchants well occupied at home. Regular lines of shelf goods are chiefly in demand. No particular class or article is in special request, nor are there any changes in price worthy of note.

The Tin Plate Decorative Co., Limited, recently organized and set going, report already more orders than they are ready to overtake. One new machine was installed on April 1, and another is expected to be in operation this week. This will enable them to keep pace with the unexpected rush for their goods. They are much pleased with their success so far. Some 20 hands are now busily employed.

* * *

The Lambe Wire Fence Co. have bought a site in London East, and it is said will shortly commence the erection of a new factory. Fence wire and wire fence makers evidently thrive here, five factories are now in this business, and all are elbowing for more room.

* * *

George Mitchell, traveller for James Cowan & Co., is in the city this week. His ground is east of Toronto as far as the eastern townships and Quebec City. He reports a good business in many of the towns where the habitants congregate, such as Joliette, Three Rivers, Arthabaska, Drummondville, Sutton, Valleyfield, St. Hyacinthe, etc. This territory might properly be said to belong to the cities of Montreal and Quebec, but the numerous good orders being captured down there by London firms is fairly conclusive evidence that those who reach out for business and are abreast of their competitors in the swim can get their share of the available trade.

* * *

Mr. William Smith, ex-president of the National Association of Canadian Master Plumbers and Steamfitters, who has been many years in business in this city, has kindly given your correspondent some particulars about the first meeting of the Provincial Association of Master Plumbers, to be held in this city on Good Friday, April 10.

* * *

The meeting of master plumbers referred to above is looked forward to with considerable interest. Local associations will each send delegates to attend. Reports will be received from every locality, and numerous subjects at present of burning interest to the trade will be discussed. A goodly gathering is expected from all parts of Ontario, and the Grigg House, on Richmond street, will be headquarters for the visiting delegates. W. Mansell is president of the provincial association this year. Meetings are to be held in the Knights of Pythias' Hall, 213 Dundas street.

* * *

It has been rumored for some time that the Stratford Bridge Company would locate in London, and that the London Rolling Mills, recently started, would make their iron and steel.

* * *

Coal oil and gas stoves are very generally used in this city, and retailers are freely advertising them in the local press.

* * *

The London Board of Trade held a brief session on March 31. The annual meeting of the board takes place this month, when the election of officers for a year takes place. Nominations were made on Tuesday for the several committees. It being the rule that the vice-president always succeeds to the president's chair, J. R. Minhinnick will be the London Board of Trade's next president, and he will ably fill the important office. The names of Geo. B. Gerrard, of the B.N.A. Bank, and Raymond Blandford, of the James Wright Hardware Company, were submitted for membership in the Board of Trade and were accepted.

W. H. I.

The many friends of R. G. Wright, Napanee, Ont., who represents The Gurney Foundry Co., Toronto, in Eastern Ontario, will sympathize with the latter in the loss of his wife, who died at her home on Friday last, and was buried on Monday in Napanee.

THE ROOF

Gets the worst of it.

There's no shelter for it. It shelters the rest from the elements. That's why every one needs the very best shingles.

EASTLAKE SHINGLES

are absolutely fire, lightning, rust and leak proof, and easy to apply.

They've long since been proved the most reliable, perfect and longest-lasting kind to be found.

With them in stock you're certain of satisfied customers and increased business.

The Metallic Roofing Co., Limited

TORONTO MONTREAL WINNIPEG

MANITOBA MARKETS.

Winnipeg, March 30, 1903.

TRADE continues good in all lines, and prices are steady in most lines, although there have been some changes during the week. Harvest tools have advanced, being now 60 per cent. instead of 60 and 10 per cent., as formerly. Scythe snaths are now quoted at $6.75, as against $6.25, and bush snaths, $7.25, as against $6.90.

Jobbers are hoping for definite prices on binder twine soon. The reason given for the delay is that manufacturers have not yet completed the purchase of all the fibre they need. Contracts for considerable amounts have been taken at open figures, and jobbers are naturally anxious to have the prices settled.

Scrap iron is in great demand, and figures are higher than for a long time. Straight No. 1 cast iron is worth $20 to $21 ; No. 2, $8 per ton. Other lines are unchanged.

Building materials are in very active demand. A round up of the building trades shows that, taking into consideration all advances on material and labor, the general cost of building has advanced 10 per cent. over that of last year. Rash statements have been going the rounds as to an increase of 35 per cent. in building, but this is entirely erroneous. The amount of building this season will be very great, more especially in the line of large warehouses. Within a radius of four blocks there are foundations being excavated for no less than six jobbing houses, besides an equal number of business blocks.

NOTES.

Mr. Sherrin, of Reston, has bought out the hardware business of E. Newby, of Holland.

A. J. Falconer, hardware merchant, of Deloraine, is putting in a multiple drawer National cash register.

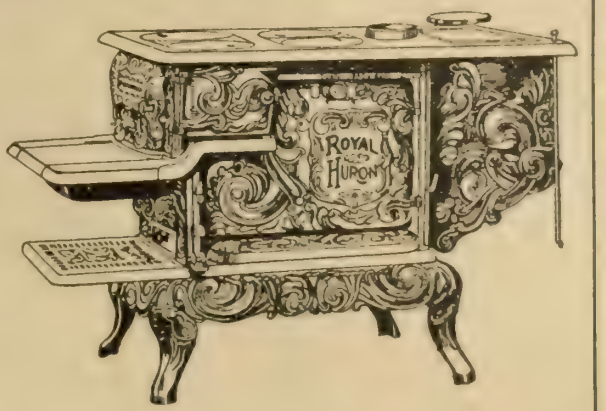
Letters patent have been issued to Jas. McDiarmid, John Carr and Isaac Pitblado, of The Winnipeg Paint and Glass Co.

The firm of Langworthy & Daniel, hardwaremen, Fort Saskatchewan, have dissolved partnership. W. F. Langworthy will continue the business.

Fairbanks, Morse & Co., of St. Paul, Minn., have opened an office in the Grain Exchange, with F. H. Crane as manager. The company handle gas and gasoline engines, steam pumps and railway supplies in general.

"ROYAL HURON" WOOD STOVE

THE Western Foundry Co., Wingham, Ont., is placing on the market a new wood stove, called the "Royal Huron," and they are now in a position to fill orders promptly. It is claimed that this stove is one of the most complete and modern of its class in the country. the oven is made of steel and is exceptionally large and roomy. The fire box is also unusually large and roomy. The reservoir is also very large, which the trade will readily recognize as a valuable feature. It is claimed to be 25 per cent. larger than in any other wood stove. The top of the stove is made is four sections with extra wide centres, the centre being lined and very heavy. The covers are also heavy. In quality, workmanship and material, the stove is first-class and promises to give the manufacturers the same reputation as they have acquired for their "Crown Huron." As the cut shows, it is fitted with a catch shelf. In appearance the stove is handsome and embodied in it is the highest perfection of stove manufacture. In spite of these many new and valuable features, the stove will sell at a moderate price.



HORSESHOERS' CONVENTION.

The Ontario Master Horseshoers' Association will meet in convention in Toronto on Friday. At 11 a.m. Mayor Urquhart will welcome the members of the Association at the City Hall, after which the regular business of the convention will be taken up.

PERSONAL MENTION.

Mr. J. R. Kinghorn, of the Montreal Rolling Mills, is spending a couple of weeks at Atlantic City.

Mr. Rosser McClure, representing the Bowser Oil Tanks, has returned to Toronto after a most successful business trip to the Old Country in the interests of his firm. Whilst there Mr. McClure succeeded in introducing the Bowser Oil Tanks into many large houses.

A TRUE "LYE" STORY.

A humorous incident occurred on Front street west, Toronto, one day last week in front of the premises of E. W. Gillett Co. Limited. A large, lifesize papier-mache sign of a colored boy sitting on a lye box is hung up inside against the area window on a level with the sidewalk, and passers-by are deceived by the natural and lifelike appearance of the sign. On the day in question two dogs, who happened to come along, suddenly caught sight of the grinning lad and made a dash for him, setting up a ferocious barking and growling, half afraid to approach nearer. After snarling and barking for a few minutes and not being molested, they slunk away.

STEEL TRACK FOR AUTOMOBILE.

Charles M. Schwab, president of The United States Steel Corporation, has given the automobile club sufficient plates, which are really wide rails, to lay nearly a mile of track, and the only obstacle remaining is the selection of a suitable site. The rails, as they are called, consist of flat pieces, nearly a foot wide, with a small flange at either side to guide the wheels. They are fastened down to the ground on a stone roadbed. Such a track was constructed some time ago in New York to test its usefulness for trucking. Experiments showed that a load hauled over the smooth surface requires only about one-third as much power to move it as those hauled over a rough roadbed. Such roads have been in operation in Germany and Spain for a number of years. They cost little to maintain and the size and speed of the loads hauled can be increased.

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word, each insertion, cash in advance. Letters, figures, and abbreviations each count as one word in estimating cost.

SITUATIONS VACANT.

CARRIAGE painters—on gears and wheels—experienced men only need apply; open shop—ten hours working. McLaughlin Carriage Co. Limited, Oshawa. f

HARDWAREMEN WHO SELL BICYCLES.

CAMERON & CAMERON, Beaverton.

CAMERON & CAMERON, whose photos appear herewith, are retail hardware dealers in Beaverton, who have handled bicycles continuously during the past five years with more and more success each year. In a chat with A. E. Cameron, with reference to this branch of their business, he informed a representative of HARDWARE AND METAL that he considered the bicycle branch of their business as one of the best paying lines they had.

A. E. Cameron, Beaverton, Ont.

"I think," said Mr. Cameron, "that no particular credit is due us for special success in the wheel business, but feel that any hardwareman paying as much attention to bicycles and their repairs as they would and do to other branches of the business, would get like results. We have, however, always conducted the bicycle department in such a way as gave the cycle salesman and repairman plenty of room, plenty of tools, plenty of sundries and repair supplies, and plenty of show space. We don't forget to have tire tape or chain grease on hand always, nor omit stocking lamps in the fall when the nights are longer and darker, and always have carbide for the fellows who need carbide. The consequence is our customers rely on us and we're satisfied. A satisfied customer is a good ad., and in selling a good wheel it is essential that the best equipment should accompany it."

H. S. Cameron, Beaverton, Ont.

FINE ART METAL WARE.

W. WILLIS MITCHELL, representing James Cartland & Son, Limited, Birmingham, Eng., is this week visiting the principal cities of Eastern Canada and going as far West as Winnipeg in the interest of his firm. He is about concluding an interesting trip throughout the trade centres of Africa, Australasia, Southern Asia and America, he having covered 61,000 miles since leaving England.

On Tuesday Mr. Mitchell showed a representative of "Hardware and Metal" his attractive arrangement of samples at the Queen's Hotel, Toronto. These consisted of fine art metal, real brass and copper ware for constructive and ornamental furnishings.

A close observation of the exquisite patterns in gongs, hall brush sets, candlesticks and other lines suitable for wedding and birthday presents and of the chaste designs of copper and brass ware for constructive purposes will give one a revelation of the high degree of artistic and mechanical perfection the manufacture of such goods can be brought to. The designs are of the most modern type and the finish is superb; while, as the goods are made from the best gilding metal ware, they are guaranteed to withstand unusual rough usage and keep their color without cleaning. These excellent qualities have enabled James Cartland & Son, Limited, to hold their own in face of all competition and in all parts of the civilized world covered by Mr. Mitchell.

In England this class of goods are handled altogether by the ironmonger (hardwareman.) There is no reason why the same should not be the case in Canada to a much greater extent than is the case to-day. Several of the large jobbing houses handle this firm's product and any of the retailers who desire to secure stocks of the same should secure full information from these houses.

A SUCCESSFUL HARDWARE RETAILER.

THERE is an old saying, "You cannot keep a good man down," which seems to be particularly applicable to the career of A. W. Humphries, Parkhill, Ont.

Mr. Humphries was born in Hamilton, where his father was a contractor in the building of cars for the old Great Western Railway. In his early youth he moved with his parents to Strathroy, in which town he was educated in the public and high schools.

After leaving school he was engaged in various occupations before reaching his life work. He tried photography, printing; was a newspaper reporter, and taught shorthand for some time. On account of his being troubled with inflammatory rheumatism he was advised by doctors to get a situation in a hardware store and live among the iron all he could. He soon secured such a position, and for several years clerked in a hardware, lamp, stove, tinware and agricultural implement store.

Like most people who have made progress in the world, Mr. Humphries kept his eyes open from the start. Later he left for Walkerton, where for five years he was employed in a stove and tinware store. From here he went to St. Thomas, finally starting in business for himself in a small way in Parkhill during 1884.

Although he had been directed to the hardware business for his health's sake, he had so adapted himself to its needs, that his progress was steady, his business having constantly grown until now his hardware, metals and plumbing goods' stock fill closely two stores of no mean size. Two clerks, in addition to Mr. Humphries and his son and partner, W. Norman Humphries, are kept busy.

Mr. A. W. Humphries.

Last year was the largest and most satisfactory his business has experienced.

Mr. Humphries' business principles are tersely summed up in a note recently sent by him to "Hardware and Metal" in the following language:

"I have always been a believer in the free use of printers' ink (perhaps the time spent in a printing office has had something to do with it); have advertised constantly and changed my ad. in almost every issue of the paper; have made it a point to know my goods thoroughly, and then not to make a higher claim for them than the goods would stand; have always guaranteed them to be just what I claimed for them, and then if they did not prove to be right, took them back."

In addition to W. Norman, who was admitted to partnership February 1 last, Mr. Humphries has a son engaged as Musical Director of the Ontario Institute for the Blind at Brantford, Ont.

Mr. Humphries received a copy of the first issue of "Hardware and Metal" which came from the press when the publication was issued from the old Jordan street office. He says of it, "I subscribed for it that day, and have been a regular subscriber and sometimes contributor ever since. It comes into my office every Saturday morning, and is a welcome visitor. It is read by all the staff."

PAINT, OIL AND BRUSH TRADES

ADULTERATED PUTTY.

A FEW weeks ago "Hardware and Metal" drew attention to the fact that considerable putty was being sold on the Canadian market that was far from being pure, according to Canadian standard. It was pointed out that many ingredients other than linseed oil and whiting would be found in an analysis of the putty now offered for sale.

The Paint, Oil and Drug Review, in commenting on this statement says:

"Without attempting any discussion on the relative merits of the different putty-making processes, it might be well to refer to the fact, which, we believe, is well known to the trade on this side of the border, that some of the largest putty manufacturers by no means confine themselves to the use of whiting and linseed oil, but make liberal use of marble dust, machine oil, corn oil, paraffine, etc., and the lowest grades of whiting, and with these ingredients and their own patented or secret processes, turn out grades of putty that have a very large sale and give general satisfaction. As to the inferiority or superiority of their product, we are not informed, but it is certain that it is in demand by the most discriminating consumers. * * * * * The proof of the pudding is in the eating. The average purchaser and user of putty does not inquire into its ingredient, but observes carefully whether it works smoothly under the knife, hardens uniformly and wears well. If so, he is satisfied."

We are ready to grant that the average purchaser and user of putty does not inquire into its ingredients. We will go further, and admit that some contractors do not care whether the putty they use "wears well" so long as it "works smoothly under the knife and hardens uniformly," and is cheap. We are ready to admit of many good attributes in putty made of machine oil, corn oil, paraffine, etc., but we still insist that such putty is an inferior substitute, that it will not wear as well as the pure article. There may be a demand for it, but it is well that the trade should buy it recognizing it to be of second quality.

ARRANGEMENT REACHED.

A satisfactory arrangement has been arrived at between the master painters and the Brotherhood of Painters, Decorators and Paperhangers of Montreal.

At a meeting of the union held on Tuesday night for the purpose of discussing the question, the following terms were unanimously agreed to:

1. Resolved, that 22½c. an hour shall be the minimum wage for a day's work, to take place May 1, 1903.

2. Resolved, that nine hours shall constitute a day's work.

3. Resolved, that all overtime, after regular day's work, shall be paid time and a half, till midnight, after midnight, double time. Sunday work shall also be paid double time.

4. Resolved, that board, fare and travelling expenses be paid when sent outside the city.

5. Resolved, that the union be recognized by the master painters, and that we keep our autonomy in regard to other trade unions.

6. Resolved, that should any trouble arise between employer and employe said trouble to be settled by an arbitration board composed of three master painters and three union men, decision to be final.

THE GLASS TRADE GRIEVANCE.

CONSIDERABLE discussion has been heard during the past few weeks in regard to some objectionable features in the glass trade, being the result of an article that appeared in "Hardware and Metal" on March 14. The following are the views of one of the largest dealers in Montreal:

"The real grievance lies with the Government blinding its eyes to the rights of importers of Belgian glass which is so largely and favorably known in this market. Prior to the inauguration of the Preferential tariff in favor of English manufacturers, and under the late Government's administration, invoices for large imports of English glass were repeatedly challenged for undervaluation, but for some reason or other, this matter was condoned and the injustice is still permitted by the present Government, without any prospect of redress. The law demands that duty be paid on the selling price of an article in the country from which it is imported. English glass is imported into Canada at a lower price than it can be bought for in England. The glass importers ask for fair dealing and even justice for all. It is not demanded that the law be amended but that the law be administered.

"English goods are now admitted at a one-third lower duty than are the foreign. It is unjust that they should also be allowed to enter at an undervaluation to the detriment of the immense interests which have been laboriously built up in Canada during many years past. Should the whole trade be allowed to slip away into the hands of English makers through unjust competition? I think not. I strongly believe that the glass trade should push this matter until we obtain the redress to which we are entitled from the Government, who, above everything else, should be fair to all."

TURPENTINE AND OIL AT HALIFAX

IN the issue of The Paint, Oil and Drug Review, Chicago, the report of the turpentine and linseed oil situation in Halifax, published in "Hardware and Metal," was reproduced with the following comment: "Buyers of turpentine and linseed oil who complain of the present quoted prices of 71c. and 44c. for small lots in this market should congratulate themselves that they do not live in Nova Scotia. There the paint trade is experiencing $1 turpentine and 75c. linseed oil. Though only a few hours distant from Boston by steamer or by rail, the prices of these staples are about 50 per cent. higher than in the Eastern States."

Henderson & Potts, Halifax, answer this comment under date of March 18 as follows:

"We would call to your attention the fact that turpentine and linseed oil are quoted and sold in the United States by the wine gallon and in Canada by the imperial gallon; the imperial gallon is one-fifth more than the wine gallon, which means a considerable reduction in the discrepancy of the figures you give; moreover, the United States is the home of turpentine, whereas on entering Canada there is a duty to pay. The association price in the Maritime Provinces at present is 65c. and 68c. per imperial gallon in barrels for raw and boiled linseed oil respectively, in small lots, so that our price for this article instead of being higher, is considerably lower than the American quotations. We think it advisable to put both you and your readers right in this matter."

PAINT AND OIL NOTES.

J. B. Mitchell and D. Annand, Halifax, N.S., have started boring for oil at Cheverie, near Truro, N.S.

A Thamesville, Ont., despatch says that a 35-barrel per day oil well has been struck three miles from that place.

C. Fitzmaurice, the Montreal painter, who fell 30 feet from a scaffold a few days ago, died in the General Hospital.

The painters employed at the King Edward Hotel, Toronto, struck for 40c. per hour last week. As the contractor had to complete a contract within a prescribed time, the "hold-up" was successful.

PAINT AND OIL MARKETS.

MONTREAL.

THE firm feeling in paint and oil circles still continues, and as the summer rates came into effect on April 1, the amount of shipping is extraordinary. Most of the manufacturers have been prepared for this, and had their stock well in hand and ready for shipment, and the greatest difficulty is in getting teams to haul the freight to the point of shipping. The market for white lead is very strong, and, in fact, orders are coming to hand faster than most

MAY 22 1903

see our Book No. 8 page 96

The sun is the only drier needed with "Ark Brand Paint."

Expensive Japans, Driers and other materials are not needed to secure a hard, glossy coat of paint if "Ark Brands" are used.

That's one of the reasons that makes "Ark Brand" the cheapest paint in the long run—that makes the consumer come back for more.

We have a very attractive offer to make to dealers who are seeking a line of paint that will silence competition.

This little note is one of the many utterances of pleased dealers who carry "Ark Brand:"

Campbellton, N.B., Dec. 1.

THE FRANCIS FROST CO., Toronto.

Dear Sirs, I have been handling your "Ark Brand" Paint for three years and am very well satisfied with the results. The paint is perfectly satisfied always keeps its color, and covers more surface than any other. I have greatly increased my trade by selling your paint, and my customers will use no other.

Yours truly,

ALEX. DIGBY.

The **Francis-Frost Co.** Limited

LINSEED OIL

N. B.—We are on the market to buy good, sound, oak Linseed Oil, Turpentine, Varnish and Machine Oil Barrels.

The progressive painter prefers to do business with a firm that is up to date in the goods it handles. Other things being equal, a concern that is wide awake and knows what is good in the market, is the concern which gets the orders.

One of the good things on the market, that is making a name for itself wherever kalsomining, tinting, frescoing or relief work is done, is MURESCO, and the progressive painter insists upon having it, as he knows it will produce the results claimed for it.

If you have not a stock on hand, better order before some of your old customers come in for it. You may lose their trade if you are not supplied. Let us at least submit our special offer and then we are rather sure we will get your order.

PURE ENGLISH PARIS GREEN.—Petroleum barrels, 14¼c.; arsenic kegs, 14½c.; 50 and 100-lb. drums, 15c.; 25-lb. drums, 15½c.; 1-lb. paper boxes, 16c.; 1-lb. tins, 17c.

TORONTO.

The week has been one of rising values. The turpentine situation shows that although buyers are only taking what they really need, stocks are so light that the prices have been forced up ½ to 1c. in New York, and rule firm here. White lead continues to strengthen and the majority of houses are asking 10c. more for the goods than the lowest quotations. Red lead is especially firm. Whiting is scarce and prices are well maintained. Other lines are steady. There is a good movement of all lines, particularly prepared paints. We quote:

WHITE LEAD.—Ex-Toronto, pure white lead, $5.00 to $5.25; No. 1, $4.62½ to $4.87½; No. 2, $4.25 to $4.50; No. 3, $3.87½ to $4.12½; No. 4, $3.50 to $3.75 in packages of 25 lb. and upwards; ½c. per lb. extra will be charged for 12½-lb. packages; genuine dry white lead, in casks, $5.02½.

RED LEAD.—Genuine, in casks of 560 lb., $4.75 to $5; ditto, in kegs of 100 lb., $5.25 to $5.50; No. 1, in casks of 560 lb., $4 to $4.25; ditto, in kegs of 100 lb., $4.25 to $4.50.

LITHARGE.—Genuine, 6 to 6½c.

WHITE ZINC.—Genuine, French V.M., in casks, $6 to $6.25; Lehigh, in casks, $6 to $6.25.

SHINGLE STAIN.—In five-gallon lots, 60 to 85c. per gallon.

PARIS WHITE.—90c. to $1 per 100 lb.

WHITING.—65c. per 100 lb; Gilders' whiting, 80c.

GUM SHELLAC.—In cases, 35 to 37c.; in less than cases, 40 to 42c per lb.

LIQUID SHELLAC.—Pure orange, in bbls., $2.30 to $2.40; white, $2.35 to $2.45 per gallon; in less quantities, 10c. extra.

GLUES.—Broken sheet, in 200-lb. bbls., 8 to 8½c. per lb.; cabinet glue, in bbls., 11½ to 12c.; emery glue, in bbls., 17c.; bookbinders', ground, 10½c.; finest American, white, 19c.; No. 1 American white, 15c. per lb.

PUTTY.—Bladders, in barrels, $2.10; bladders, in 100 lb. kegs, $2.25; bulk in barrels, $1.80; bulk, less than barrels, and up to 100 lb., $2.05; bladders, bulk or tins, less than 100 lb., $2.75.

PARIS GREEN.—Petroleum bbls., 13c. per lb.; arsenic kegs, 13½ to 14c.; 50 and 100-lb. drums, 14 to 14½c.; 25-lb. drums, 14½ to 15c.; 1-lb. packages, 15½c.; 2-lb. packages, 17c.; 1-lb. tins, 16c.; ½-lb. tins, 17c.

PLASTER PARIS.—New Brunswick, $2 per barrel.

PUMICE STONE.—Powdered, $2.50 per cwt. in bbls. and 4 to 5c. per lb. in less quantity; lump, 10c. in small lots and 8c. in bbls.

LIQUID PAINTS.—Pure, $1.20 to $1.40 per gallon; No. 1, $1.10 per gallon.

BARN PAINTS.—65 to 70c. per gallon.

CASTOR OIL.—English, in cases, 8 to 9c. per lb.; and 9 to 10c. for single tins.

LINSEED OIL.—Raw, 1 to 2 bbls., 61c.; boiled, 64c.; 3 to 5 barrels, raw, 60c.; boiled, 63c.; 6 to 9 barrels, raw, 58c.; boiled, 61c. delivered. To Toronto, Hamilton and London, 2c. less. All quantities of 10 barrels and over of linseed oil sold only f.o.b., Toronto, Hamilton, London and Guelph.

TURPENTINE.—Single bbls., 95c.; 2 to 3 bbls., 94c. delivered; Toronto, Hamilton and London, 1c. less. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c. and 10-gallon packages, 80c. will be charged.

WINDOW GLASS.

MONTREAL.

There is a large local trade being done and dealers expect a heavy season, as there seems to be a boom in sight in the building trade. There is also a change in price looked for in the near future. We quote: First break, 50 ft., $2; second, $2.10 for 50 ft.; first break, 100 ft., $3.80; second break, $4; third break, $4.50; fourth break, $4.75.

TORONTO.

There is a strong feeling among jobbers in favor of an advance in all sizes in sympathy with the stronger feeling in Belgium, and it is possible this feeling may crystalize in some definite action before the end of the week. Our prices are: Star, Under 26 in., $3.80; 26 to 40 in., $4; 41 to 50 in., $4.50; 51 to 60 in., $4.75; 61 to 70 in., $5; 71 to 80 in., $5.50. Toronto, Hamilton and London. Terms, four months, or 3 per cent., 30 days.

HALIFAX and MONTREAL

INDUSTRIAL GOSSIP

THE Long Mfg. Co., Orillia, Ont., are asking for tenders for the erection of a brick addition to their foundry premises.

John King intends to start a saw mill at Oakville, Ont.

Fire did about $1,000 damage to the St. Thomas, Ont., Brass Foundry last week.

Grundy Bros., Strathroy, Ont., are rapidly getting their plant in shape for operations, and expect to be actively engaged in all branches of foundry work in a month or so.

Considerable extensions to the Massey Harris works at Hamilton are to be made. Architect Edwards, of Hamilton, has prepared the plans.

According to several steel authorities identified with the United States Steel corporation, many of the railroads of the United States will be using steel instead of wooden ties within five years.

The Sussex Manufacturing Co. intend erecting a large foundry near their factory on Summer street, St. John, N.B., and will fix the old foundry buildings over for tenement houses.

The strike of the employes of the McLaughlin Carriage Company, Oshawa, Ont., which was inaugurated on February 18 last, has practically terminated and many of the men are returning to work.

The tinsmiths and sheet metal workers of Winnipeg formed themselves into a union Friday last at Trades hall. An application for a charter was also made to the Amalgamated Sheet Metal Workers' International Association.

Chatham, N. B., Board of Trade has recommended a loan of $20,000 to a local company which proposes to establish a wood-working factory in that [illegible]; also that the assessment on the company's works be fixed at $15,000.

The plans of the new Canadian Locomotive Works, which are to be constructed at Longue Pointe, are all ready, and work will be commenced at once and will be pushed forward rapidly. It is estimated that the company will expend about $800,000 on the buildings alone.

Friday last, March 27, was the 21st anniversary of the organization of W. F. Cockshutt & Co., Brantford. Mr. Cockshutt celebrated the occasion by a dinner to his employes at his residence, when the cordial relations between master and men were evidenced in unmistakable manner.

M'DONNELL ROLLING MILLS SOLD

The Toronto Bolt and Forging Co., of Swansea, Ont., have bought The McDonnell Rolling Mills, near Toronto, paying about $90,000 for the property. About 20 acres of land adjacent have also been secured. It is not yet announced whether the new owners will continue to operate their newly acquired property on its present site, or whether they will move it closer to their old works at Swansea.

STEEL FOR TOOL MAKING.

THE dimensions of the steel for a tool should correspond with the stoutest part of the tool, because upsetting the steel to increase the dimensions will never do good, says Styrian Notes.

Do not cut a piece for a tool from a bar without heating the bar to a dark red heat, because, by knocking off a piece cold, after notching, slight cracks may occur in the ends, which may not become apparent until after tempering.

For heating, use charcoal or coke in preference. If using coal it must be perfectly burned through until all the sulphur is gone, otherwise the steel will absorb sulphur, producing surface cracks.

Do not use too cold water. Leave large pieces in the water or oil until cooled clear through.

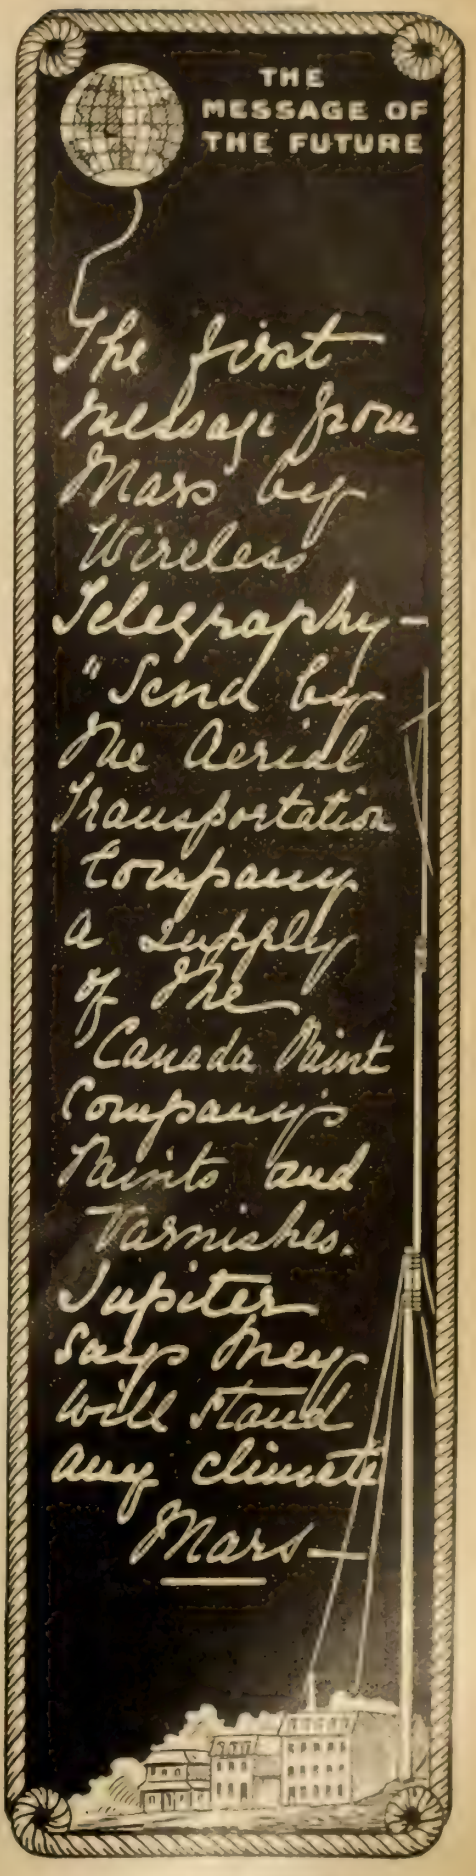
There should always be a good fire when the tool is introduced. The blast must then be lowered at once, especially with large tools, and only when the tool attains the proper temperature, depending upon the composition of the steel, should blast be again employed.

It is important that the forging heat should never be employed as the hardening heat, but, after forging, the tool should be allowed to cool, and then heated up again for hardening.

Tools of difficult shape should always be annealed before the hardening process.

Do not forge steel at a lower heat than cherry red, and heat several inches higher than it is required to be forged.

In hardening, always employ the lowest heat at which the steel will harden.



ALL RIGHTS RESERVED

A REVOLUTION IN TOOL STEEL.

SOME of the leading consumers are now turning their attention to "Profile" tool steel, made by J. Beardshaw & Son, Limited, Sheffield. While this has been on the market for a few years, it has not yet been pushed hard in Canada or the United States. In Great Britain it has already become an unqualified success.

It has advantages over many other steels. First of all, the great saving of labor required in converting the bar into the finished tool is of the utmost importance. The manufacturers have indeed marked an advance in the rolling of steel bars for tools, for they have entirely changed their shape, making them so near the requisite form as to necessitate the minimum of labor in obtaining a finished tool. No milling or forging is required. The drills and the rimmers are milled out in the rolling, and all that is left to do is to grind the points to a cutting edge. Thus a great deal of labor is done away with. Great progress has also been achieved in suppressing the forging, which is often done by inexperienced hands to the hurt of the steel. Nearly all tools can be made without forging the bars.

The cost of "Profile" steel, in itself, is greater than that of the best cast steel for tools; but this is much more than overcome by the fact that the bars are milled to nearly the required shape for the tool, and a good deal less steel has to be purchased. For instance, in order to make a twist drill 1⅜ inches in diameter by 18 in. long a piece of 1⅜ in. round steel, weighing 117 oz. must be used, as against a piece of twist "Profile" of the same diameter, but weighing only 49 oz. Experiments prove that "Profile" steel is 45 to 55 per cent. lighter than corresponding sizes of ordinary tool steel.

The quality of the steel is perfect, and will compare with the finest steels on the market; the shapes constitute an indisputable economy, and the steel should be well received wherever its work is shown. No better recommendation can be given it than that of several American managers of large English concerns, who state positively that if the "Profile" steel is properly pushed in the United States it is bound to have an immense sale. The same may confidently be said as regards the Canadian market. Beardshaw & Son's representative in Canada is Mr. Alexander Gibbs, Montreal.

H. S. Jones & Co., general merchants, Sanrevois, Que., have dissolved, and Jones Bros. have been registered.

THE REASONS WHY

Messrs. Push & Co. and all dealers buy and sell **Church's Cold Water**

ALABASTINE

are, because it is **time tried** and **time tested**, and they can speak with confidence when recommending it to their customers. "What's the use" they say, "of trying to sell something else, when it has to be recommended 'the same thing' or 'just as good as' **Alabastine?**"

"The Alabastine Company are the pioneers in the manufacture of wall coatings: the experimental stage is past with them. What they have forgotten, the manufacturers of kalsomines and the like are just beginning to experience."

Good goods, well advertised, fair margins, satisfied customers! These are a few of the reasons for handling **Alabastine.**

Alabastine is ready for use by adding **cold water.** This and other features are protected by Canadian Letters Patent.

Alabastine is made in Canada, and is for sale by Wholesale Hardware and Paint Dealers. Also by

The **ALABASTINE COMPANY** Limited

PARIS, ONT.

GLOBE PAINTS

We have been in business for eight years, and have yet to hear of a single can of our paint being returned because of poor quality. This ought to be a recommendation for your customers.

HEATING AND PLUMBING

STEAM AND HOT-WATER HEATING.

WHERE a steady, uniform heat is required, hot water usually gives the best results, as the large volume of water, when once heated, remains warm for a long time and gives off heat as long as the temperature is higher than that of the surrounding air. It also begins to radiate heat practically as soon as the fire is started, writes C. A. Miller in National Builder.

Steam will not begin to heat up a building until the water in the boiler is boiling hot or at 212 deg. As long as there is any pressure of steam the radiators will be at this temperature, 212 deg., but the heat stops as soon as the temperature drops below 212 deg. For this reason steam will heat up a building or room quicker, if the water is already hot in the boiler. Steam is better where indirect heating is used in connection with a ventilating system, as the higher temperature of the steam heats the surrounding air more quickly. Less radiation is required for steam, owing to the higher temperature, so that the cost for radiation is less, but as a hotter fire is necessary, it usually requires more coal. Steam requires more attention possibly to keep up the pressure. Neither should get out of order easily if properly installed and cared for.

Steam is better when it is desired to use them for only a part of the time, as the pipes and radiators are empty when turned off.

Steam can be more easily distributed to considerable distances, to remote parts of a large building, or even to adjacent buildings, so that it is better for hotels and large buildings, manufacturing plants, while hot water gives better results when the piping is confined to a small area, as in private residences, small churches and buildings where the entire space is to be uniformly heated.

Either system should be carefully proportioned and designed for the particular location, and should be installed by mechanics who understand that class of work.

ELECTRICAL WORKERS' TROUBLES.

The trouble at the King Edward Hotel has not yet been settled. For four hours Wednesday night the Electrical Workers' Union considered the difficulty pending with the plumbers and steamfitters over the jurisdiction of laying conduit pipes in the King Edward Hotel, but no definite conclusion was reached. Robert Glockling, secretary of the Ontario Labor Bureau, who is endeavoring to adjust the trouble, held a conference on Thursday, with a member of the local union, who has just returned from Washington, where he submitted the case to the officers of the International Union, but a decision has hot yet been announced.

IMPROVEMENTS IN PLUMBING.

A FINE house put up nowadays would not be likely to contain less than three bathrooms, and it might have half a dozen. Houses with ten or a dozen bathrooms are in no wise remarkable ; in some houses there are fifteen or twenty bathrooms, says the Kansas City Architect and Builder.

In beauty of construction and equipment and adornment, great advances have been made in bathrooms in very recent years. People spend five times as much money on bathrooms now as they did even so recently as a dozen years ago.

One would have to be pretty rich to possess some of the bathrooms built nowadays. There is one now in course of construction in New York city the tiling alone of which will cost $20,000 or more, the work upon it occupying two years' time.

Of course, not all bathrooms run up in cost like that ; but there are plenty of them that run up into the thousands, and that are most luxurious and artistic and beautiful.

It might seem that now, indeed, as to beauty and utility, the limit had been reached in the development of the bathroom, but a man familiar with this branch of house equipment said that, while it might not be easy at the moment to say in just what manner further progress in this matter could be made, yet he had no doubt that we should continue to advance in the construction and the beautifying of our bathrooms in the future, just as we have done in the past.

As everybody knows, great improvement has been made in this country in recent years in all sorts of bathroom equipment, in the inexpensive as well as in the more costly. Here bathtubs of graceful shape and admirable design, comfortable in use as well as sightly to the eye, smoothly enamelled in white, have largely taken the place of the old-time copper or zinc tubs in a wood casing, such as were once thought good enough for anybody.

Such a modern tub with all the other fittings correspondingly good and modern placed in a room the floor of which at least is tiled, may now be found, making a very comfortable and tasteful bathroom, in flats that would scarely be classed as expensive. The very cheapest of bathroom equipments have been vastly improved.

In all these things the United States is far ahead of any other country ; there are shapes and sizes in bathroom porcelains that are not produced at all anywhere else.

PLUMBING AND HEATING NOTES.

McWhinney & Harvey, plumbers and roofers, Bank street, Ottawa, have made an assignment to Wm. A. Cole for the benefit of their creditors. The creditors meet at Mr. Cole's office, Ottawa, Monday, April 6.

The machinery for the new factory is arriving, and will soon be placed in position. Quite a quantity has already been passed through the Customs here by The Standard Ideal Sanitary Co., and more is expected shortly. It will not be long before smoke will be seen issuing from the chimney of this new industry at the harbor.—Port Hope Times.

PLUMBERS ELECT OFFICERS.

At a recent meeting of the Master Plumbers' Association of Montreal, the following officers were elected for the ensuing year : Hon. president, J. Date; president, T. O'Connell ; 1st vice-president, C. E. Thibault ; 2nd vice-president, R. Egan ; 3rd vice-president, E. Lesperance ; secretary, John A. Gordon ; English corresponding secretary, J. W. Hughes; French do., J. Lamarche ; financial secretary, F. Brunet ; treasurer, J. A. Giroux ; chairman sanitary committee, P. C. Ogilvie ; do. arbitration committee, John Watson ; do. auditing committee, J. A. Sadler ; do. legislative committee, T. Christie ; do. apprenticeship committee, T. Moll.

BUILDING NOTES.

THE Bank of Ottawa will erect an eight-storey fire-proof building at the corner of St. James street and Dollard lane, Montreal, which the bank has just purchased from G. R. Prowse for $70,000.

Ingersoll, Ont., merchants are asking the C.P.R. for a new station in that town.

Architect Rastrick, of Hamilton, is preparing plans for several dwellings in that city.

The Manchester, Robertson, Allison, Limited, St. John, N.B., are making large extensions to their premises.

E. H. Briggs & Co. have purchased a warehouse site at Winnipeg, and will probably erect a factory and warehouse.

William Dow & Co. will erect a new brewing building at the corner of Colborne and Notre Dame streets, Montreal.

A compartment house is to be erected on Hutchinson street, Montreal, and will contain 36 suites of four rooms each.

Merille & Co. and the Marks-Clanet-Dobie Co. are having plans prepared for large extensions to their new warehouse.

Ottawa building contractors are being "held up" for higher wages by the bricklayers, plasterers, stonemasons and laborers.

The authorities of Notre Dame Hospital have purchased a site on Sherbrooke street, Montreal, for the erection of an hospital for contagious diseases.

Mr. Bruce, manager of the Sovereign Bank at Newmarket, Ont., is having a residence fitted up over the bank offices in the most modern style.

The new store which The Stanley Mills Co. are building in Hamilton will be furnished after the most modern plans. Over 1,000 incandescent lights will be installed.

F. G. Wright, representing the Crown Grain Co., Chicago, stated in Winnipeg last week that his firm intends to build ten 60,000 bushel elevators along the C.P.R. line this year.

ONTARIO PLUMBERS' CONVENTION.

The Ontario Master Plumbers' Association will hold their annual convention at the Knights of Pythias Hall, London, Ont., on Good Friday, April 10.

A large attendance is looked for, as delegates are expected from Toronto, Hamilton, St. Thomas, Windsor, Brantford, Barrie, Guelph, St. Catharines, and, probably, from Ottawa, Smith's Falls and Peterboro'. New associations have been formed at Sarnia, Chatham and Stratford, and these will likely seek admission to the provincial organization. The headquarters of the convention, except for meeting purposes, will be the Gregg House.

Considerable time of the convention will be devoted to organization work, as it is desired to have all master plumbers in the province affiliated with the organization.

The officers of the association are: President, Wm. Mansell, Toronto; 1st vice-president, Wm. Clarke, Hamilton; treasurer, J. H. Wilson, Toronto; secretary, Louis L. Grow, Toronto.

A NEW ACETYLENE BURNER.

A BURNER for acetylene gas in which the usual injection of air is no longer employed has been designed by M. Javel, a French engineer, says an exchange. During some early experiments he noticed that if a single jet burner made of steatite without air injector was supplied with well purified gas while the jet pointed in an upright direction, growths of carbon soon appeared at the orifice and distorted the flame. But when the jet was fixed in a horizontal position the carbon was deposited in the form of a tube, which did not affect the shape of the flame nor the amount of gas escaping from the orifice; and when this tube attained a length of 12 or 15 mm. it fell off bodily, leaving the burner clear with the same rate of consumption as at first. Following up this result, Javal removed the metal plates from a twin Billwiller burner so as to stop injection of air, and he obtained equally satisfactory effects. At the time of reading his paper one such burner had been in use for 10 or 12 consecutive hours per day over a period of 2,071 hours, which, at three hours per day, represents a life of 23 months. This burner was never cleaned out, and its original consumption remained unchanged. Further tests with glass and metal jets were unsuccessful, carbon growths quickly appearing. It seems to be necessary that the gas orifice shall be drilled in a flat surface rather than at the apex of a conical tube because the former method of construction tends to keep the base of the flame at a distance from the body of the burner, which consequently does not get so hot. When one of the arms of a non-injector burner which was behaving perfectly was heated with a gas flame, deposition of carbon rapidly occurred at the corresponding orifice. Several years ago, at the Buda-Pesth congress, Bullier showed that the duty of a burner of the Manchester (fishtail) type could be raised if the burner were systematically cooled by surrounding it with a water jacket. These and kindred experiments need watching with considerable attention, because it must be remembered that the plan of adding air to a gas before it is consumed in any burner (except an incandescent) is wrong in principle, and though the method has proved successful in the case of acetylene, it can only be considered a compromise.

BUILDING PERMITS ISSUED.

MONTREAL.

A. Lamy, St. Denis street, three-storey building, $1,800.

FINANCE AND INSURANCE

BRITISH exchanges to hand contain reports of the judgment of the Justice in the proceedings taken to prosecute Whitaker Wright, the late managing director of The Globe Finance Corporation, Limited. It came out, in the judgment delivered, that the desire of the creditors to prosecute Wright was by no means unanimous. It appears that creditors representing £650,000 desired to prosecute, while those representing £100,000 expressed themselves as neutral, while The Nichol Corporation, creditors for about £175,000, were actively opposed to proceedings being taken. The judge estimated that the expense of prosecuting Mr Wright would be £5,000, while those who were ready to prosecute him were not prepared to pay less than £1,250 into court. The amount of the admitted liabilities is about £1,665,000. It may be pointed out that the costs of the prosecution are to come out of the assets of the defunct Globe Finance Co.

* * *

The experience of the Canadian public during the past few years certainly confirms us in the belief that prompt action should be taken by the Government for the suppression of bucket shops and irresponsible brokerage offices of the same description. Several of the general managers of our leading financial institutions have recently referred to these concerns in terms of strong condemnation, deploring the consequences resulting to their patrons, and characterizing this form of speculation as the worst form of gambling. The authorities are perfectly cognizant of the evil, and we think it high time that the Government should recognize it also and enact legislation for its immediate suppression. There are plenty of reliable brokers associated with our recognized legitimate exchanges to meet the requirements of those desirous of making stock investments, and we cannot too strongly urge the Government to do its duty with reference to the others.

* * *

Referring to the money market Emilius Jarvis & Co., bankers and brokers, Toronto, in their weekly letter say: "The money market, which has such a vital effect upon the Stock Exchange, is at present somewhat of a conundrum. Since our last letter money has been scarce in New York until yesterday, when the rate was lowered towards the close of the market to 3½. In our own markets, however, it is decidedly more stringent than last week. In Montreal we are advised that many of the brokers are now charging their clients 7 per cent., based upon a general advance by the banks. The Montreal broker, as a rule, making a flat rate to his clients of 1 per cent. in excess of the amount he has to pay: whereas in our markets here the increase is only ½ per cent. The rate, as a general thing, has been increased in Toronto by the banks to 6 per cent., making the rate of buyers 6½, and at this price it is distinctly hard to negotiate new loans. Of necessity, therefore, the market is dull and professional in tone."

* * *

In The April Atlantic, Charles A. Conant deals with the stock markets and asks what would be the result if the stock markets closed. He points out that if such were possible, there would be no guide except the isolated facts gathered here and there at great trouble and expense in regard to the value of railway and other stocks. Of course, speculations of this kind are idle, for the stock market is come to stay and is a legitimate institution aside altogether from the fact that it affords an opportunity for speculation, which might sometimes be discountenanced. It is, after all, a great safeguard of the public wealth, for were there no stock markets there would no doubt be a great increase in the number of fraudulent enterprises.

* * *

BENEFITS OF TRUST CORPORATIONS.

A SHORT time ago a prosperous and well-to do merchant, doing business in Ontario, and favorably known to many of the readers of this journal, died suddenly, leaving his affairs in the hands of an executor, who, with no business qualifications or experience, was entirely incompetent for the position. Naturally, the assets of the business, which was a large and profitable one, were carelessly and improperly handled with the result that very little, if anything, was left for his family. This instance, one of many, should be a lesson to business men to at once put their affairs into a shape that would insure satisfactory realization should they suddenly be called away. The duty of administering the trusts of a will is too important to be entrusted to a friend who lacks the experience which is essential to the proper discharge of the duties of such an important nature. With efficient management, systematic methods and a directorate composed of business men of the highest character and standing in the community, the several Canadian trust corporations of the present day are in a much better position to perform the duties of trustees than a private individual.

An erroneous idea appears to prevail as to the charges made by these companies; as a matter of fact, they never exceed what any court would allow to a private executor.

In the transactions of a reliable trust company's business every species of speculation is carefully avoided, frequent and regular inspection of the books and securities of the company is made by skilled and reliable auditors, and restricting their investments to those of the highest order, their clients have the amplest guarantee that in every respect their interests will be faithfully guarded. The management of an estate by a trust institution avoids the possibility of many serious complications. The death of a private executor in one case or the removal or absconding of another, would necessitate in either event an immense amount of trouble and possible loss, and the employment of a public trust company would obviate any danger arising from any possible and probable contingencies of this nature.

* * *

CONVENIENT FOR MONEY DEPOSITORS

The deposit business of The Canada Permanent and Western Canada Mortgage Corporation, which has hitherto been confined to its Ontario branch office in Toronto, has now been extended to the Manitoba branch office, in Winnipeg, and to the Maritime Provinces branch office, in St. John, N.B. At both these branches the same liberal terms and facilities will be afforded depositors as are given at the Toronto office. The company pays interest at 3½ per cent. per annum, compounded half-yearly. As an interest bearing account may be opened with any sum from $1 upwards, the inestimable advantages of having a savings account have been placed within the reach of everyone.

Combined with this is the relief from anxiety afforded by the strength and stability of this strong financial institution with a paid up capital and reserve amounting to $7,600,000. Its invested funds amount to the very large sum of over $23,600,000. Notwithstanding this, every depositor, no matter how small his account may be, receives the same prompt and courteous attention. Experience has taught the management that, in many cases, accounts which had very small beginnings have grown to be among the best on its books. Many, which now show very handsome balances, had a most modest inception. The company has devised a system by which deposits may be made and withdrawn by mail as easily as if the bank were in the depositor's own post office. Thus, no matter where you may live, the facilities of this progressive institution are open to you. A booklet will be sent free to anyone asking for it and mentioning this journal.

AMALGAMATION OF COMPANIES.*

By Howard R. Wellington.

THE subject which the committee have selected for me to night is no doubt one of the most important before the business world to-day, and is so wide and far reaching that, it is with a great deal of hesitation I undertake the task. It might be better, perhaps, to discuss the experience of an average bookkeeper in one of the amalgamating companies, and the matters which would come under his notice during the operation.

There seems to be a diversity of opinion as to there being any difference between trusts, combines, and amalgamations, although, there is no doubt some fine distinction. A trust is a combination of like industries for the sole purpose of waging war against all other manufacturers of such lines as are manufactured by the trust, and forcing such manufacturers either to sell out to the trust or go under. An amalgamation is more of a natural growing together of various industries for the purpose of self-defence against unjust competition, and, in a large majority of instances, the tendency has been to lower, rather than raise prices. The object of an amalgamation is primarily to concentrate interests, the entire business being under one executive head and management; to reduce expenses, such as managers' and foremens' salaries, travelling expenses—one traveller handling all lines manufactured, and not crossing and recrossing the routes of other travellers; and lastly, probably the most important feature, to increase profits, which may be accomplished by buying raw materials, etc., in larger quantities, hence at lower prices; with a larger capital the volume of business is increased, and, as prices are usually maintained, profits increase accordingly. It need hardly be necessary to go into the details in regard to the necessary steps leading up to the procuring of a Charter of Incorporation, as these requirements may be readily obtained from the Joint Stock Companies' Acts, but there are unavoidably a great many troublesome entries which confront the bookkeeper during, and especially after, the amalgamation, and which it might be advisable to discuss. The course of procedure with companies intending amalgamation depends largely upon the agreement with the vendors and the circumstances of each case.

Probably the first step after arrangements have been made, and the documents necessary to the transfer completed, would be for each concern to take stock of all merchandise, and value the plant and equipment, the stock being thoroughly audited by an accountant. Such stock at cost, together with plant, equipment, goodwill and other assets would be transferred to the new company and shares given in payment of same. Usually in a large business, it would be impossible to have the stock taken and audited within the short period in which the transfer is effected, and to overcome this difficulty, an estimated value, based upon previous years' stock and annual

Howard R. Wellington.

sales is arrived at, and the transfer effected accordingly.

Should the estimated value prove to be less than the actual value, when ascertained, the new company would either pay cash for the amount transferred over and above the estimate, or give additional shares for such, but, if the estimate prove to be more than the actual value, the vendors of course would have to pay the company the difference.

If the value may be readily ascertained, no such course would be necessary, the individual companies simply receiving shares in the new company in payment of the amount transferred.

The "goodwill" of each company amalgamating, which forms a part, and sometimes a very large item, of every transfer, depends entirely upon the nature of the business and its length of operation, and is arrived at simply by an agreement between the vendors themselves. In some cases all assets, both fixed and moveable, are transferred, as well as all liabilities, but the method of effecting a transfer, which meets with general favor to-day, is to arrange to have the individual companies collect all accounts receivable contracted prior to the transfer, and also pay all accounts payable and other liabilities, the new company taking over the plant, stock, etc., only.

There is some difference of opinion among accountants as to the manner in which the profits of companies intending amalgamation for the period of years under review, should be set forth in the prospectus, the prevailing method being to show the combined average yearly net profits for the three years preceding the amalgamation.

It is held by some, however, that the annual net profits should be shown for each company separately for a period of five years previous to the amalgamation, in this way showing the earning power of the individual company each year.

As the accountant's certificate influences the investment of thousands of dollars, this fact being recognized now more than ever before, great care should be exercised and serious thought given when when making up a statement of this nature.

The parties applying for Letters Patent are the provisional directors of the company until the directors are elected at the first general meeting of the shareholders. The petition for charter should set forth the objects of the amalgamating companies, and various other matters, all of which may be obtained from the Companies' Acts, but it must be very specific, as the charter will only be granted for the purposes enumerated in such petition, and no change may be effected afterwards unless through the usual formalities of applying for a Supplementary Letters Patent.

After the charter has been obtained by the provisional directors, and the prospectus, setting forth the names of directors, capital stock, prospects, objects, etc., issued, and the stock is subscribed for and allotted, a meeting of the shareholders is called by the provisional directors, to transact any business necessary to the operation of the new company; to pass by-laws and to elect officers, or, rather a board of directors, from whom the officers are elected at a special meeting of the directors usually held directly after the meeting of the shareholders.

The directors are elected from, and are accountable to, the shareholders, and are usually elected from the various officers of the different companies amalgamating. A great amount of care should be exercised in getting up a prospectus, as false statements or misrepresentations might

75 YEARS *ESTABLISHED 1825.* *75 YEARS*

[illegible] complications when discovered.

In every amalgamation, organization expenses such as lawyers' fees for searching deeds, records, patent rights, etc., prospectus' expenses, such as railway fare, salary, etc., charter fees, advertising, prospectus, printing, etc., are incurred, and are settled by the company on its formation. But suppose the company does not form, each provisional director or promoter binds himself by his own act only, and the subscriber for stock may recover the full amount of his deposit, unless such subscriber has signed an agreement authorizing the promoters to defray expenses of organization out of the deposit paid upon shares. Promoters are very often paid for their services in stock in the new company, the entry generally being—Organization Expense To Capital Stock Account.

Organization expenses usually form a large item in the amalgamation of companies, but it is hardly fair that the full amount be charged against the profits of the first year. To overcome this, a proportion is written off each year, and the balance carried forward as an asset until it eventually disappears. It would be impossible to give a set of opening entries, as it would depend entirely upon the arrangement made with the vendors in regard to the transfer, but, in a general way, the assets transferred should be debited, "Crediting Shareholders of Old Company;" the liabilities credited, "Debiting Shareholders of Old Company," the balance in the shareholders' account showing the amount of stock held by them in the new company, the completing entry being:

SHAREHOLDERS OF OLD COMPANY.
To CAPITAL STOCK ACCOUNT.

If stock is offered for public subscription, the entries for general ledger purposes might be made as follows:

SHAREHOLDERS.
To CAPITAL STOCK.

For amount of stock subscribed:

CASH
To SHAREHOLDERS.

as installments are received on subscriptions, thus closing "Shareholders' Account" in the general ledger.

If various classes of stock are subscribed for, such as First Preference, Second Preference, or Common, these divisions may be credited instead of simply using the term "Capital Stock." As a rule shareholders are treated collectively in the general ledger, one, two or three accounts being kept according to the class of shares subscribed for, the accounts for individual shareholders being kept in the stock ledger.

Certain books are required to be kept by law, the principal being, a book containing a copy of the Letters Patent, or Supplementary Letters Patent; a record book of all shareholders, stating occupation, address, and number of shares held by each; a record of directors' names, addresses and date of election and retirement; a register of transfers, recording all changes in shares; and a stock ledger, showing shares held by individual owners.

Probably the first difficulty with which the office man will have to contend when the amalgamated company has not taken over the accounts receivable or payable of the individual companies, will be upon receipt of a cheque, which includes accounts for both the old and new companies. Suppose, for instance, that Brown & Smith owe the old company $10, and the new company $15, subject to cash discount of 2 per cent. Upon receipt the cheque may be entered in the cash book of the new company, as follows:

Brown & Smith.....			$24 50
Less amount of Old Co. a/c...	9 80	30	$14 70

The balance, $9.80, being entered in cash book of old company in the usual way, the new company paying amount each time, or the aggregate amount due, at the end of day or week.

When goods are returned, after the amalgamation, which were charged prior to the date of transfer, the correct method (although more lengthy) would be to credit same through the books of the old company and, if necessary, transfer such credits by means of cross entries, to the books of new company, charging new company with all goods thus returned and credited, at cost, periodically. If this course were not adopted, the goods would be taken into stock by the new company and a liability assumed for the selling value, whereas such goods should be taken into stock at cost, as the old company had originally made the profit on them. The following outline of a system would no doubt answer in a general way for running the offices of the various companies after amalgamation.

Each branch shall keep its own cash book in the form of loose sheets, a duplicate sheet of each day's cash transactions being sent to head office, where it shall be checked and filed.

All books shall be kept by head office, where all posting shall be done.

Each branch to have a bank account, and all monies received shall be deposited, remittances being made by draft to head office of all over a stipulated amount.

All accounts payable shall be settled by head office, unless goods are paid for at time of purchase; every payment by branch being vouched for by manager of such branch, and voucher forwarded to head office, with the copy of cash statement.

Each branch shall do its own invoicing, in triplicate, one copy to be kept on file by branch for reference only, one to be sent to head office for posting medium, the original being sent to the customer.

All purchase invoices must be received in duplicate by head office, where the copy is kept on file until original is passed by the branch, thus assuring that all goods received are settled for, receiving books being used in each branch.

The sales of each branch are to be recapitulated, both by the head office and by the branch, which makes a sure check on the totals.

The accounts may be arranged in such a manner as to show the profit made by each branch of the business during the year, charging each branch with all goods purchased for it, and, by a system of internal invoices, charging at cost all goods delivered to it by the head office or other branches; crediting each branch with its sales, less returns; charging against the gross profit from trading account, all branch expenses and also a proportion of the general expenses, the balance being the net profit for the period.

I have endeavored to treat this wide subject in a general way, and hope that it may lead up to a discussion, as it certainly is a subject which is not easily exhausted, and which furnishes ample material for thought.
